QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

LISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

9.] **Marriages**—*October, November, December,* 1875.
Births and **Deaths**—*January, February, March,* 1876. [Price 9*d.*

General Register Office, Somerset House,
1st May 1876.

he UNITED KINGDOM the *births* of 300,050 children, and the *deaths* of 191,850 s of both sexes, were registered in the three months ending 31st March The recorded natural increase of population was thus 108,200.

registered number of persons married in the quarter ending 31st December vas 146,380.

resident population of the United Kingdom in the middle of 1876 is esti- at 33,089,237; that of England and Wales at 24,244,010, of Scotland 27,811, and of Ireland at 5,317,416. The birth-rate in the United Kingdom *first* quarter of 1876 was 36·4 per 1000, and the death-rate 23·3. The ge-rate in the *fourth* quarter of 1875 was 17·7 per 1000.

several facts concerning Scotland and Ireland are recorded in the Quarterly ns of the Registrars General of those parts of the United Kingdom.

ENGLAND.

s Return comprises the BIRTHS and DEATHS registered by 2193 Registrars the districts of England during the quarter ending 31st March 1876; ne MARRIAGES in 13,672 churches or chapels, in 7595 registered places of p unconnected with the Established Church, and in 631 Superintendent rars' Offices, in the three months ending 31st December 1875.

marriage returns are as usual in arrear, and are for the last quarter of the 875. The marriages exceeded the average, and increased faster than the tion. Still the marriages in the purely agricultural counties continued Upon the other hand marriages increased in several of the manufacturing ts to which the migrating population resorts. In the first three months of ar 1876, the births registered are more plentiful by thousands than they nitherto been. The mortality of the winter is under the average of the , variable in heat and cold, and rainy as it has been. The natural recorded se of population owing to the high birth-rate and the low death-rate is nusually great. The prices of wheat and coals were comparatively low; of es high. Meat too was dear. Pauperism is diminishing.

ll-pox has destroyed very few lives: the fever rate has been low. Whooping- has reigned unusually in many districts. Diphtheria has been very fatal in southern districts; and scarlet fever has, here and there, prevailed with y. No important disease has been widely epidemic.

Marriages.

During the last three months of 1875, 121,132 persons were married in England and Wales, the marriage-rate being equal to 20·1 per 1000 persons living. This rate exceeded by 0·1 per 1000 the average rate in the ten preceding corresponding quarters, and by 0·4 the rate in the last three months of 1874. The marriage-rate in the three months ending December 1875 was but 15·1 per 1000 in the agricultural counties of the South-western Division, whereas it was 21·7 in the Yorkshire Division. The lowest county marriage-rates were 11·3 in Herefordshire and 12·6 in the extra-metropolitan portion of Middlesex; the highest rates, 24·4 and 24·7 in Leicestershire and Nottinghamshire.

The number of marriages recorded in England and Wales in the last quarter of 1875 slightly exceeded the average number in the three preceding corresponding quarters; if the average be corrected, however, for increase of population the registered marriages show a slight decrease. Compared with the average numbers in the three preceding corresponding quarters, the marriages in the quarter now under notice showed a large increase in London, Warwickshire, and North Wales; whereas there was a marked decline in Buckinghamshire, Cambridgeshire, Suffolk, Norfolk, Cornwall, and Monmouthshire. Not only is the marriage-rate in agricultural counties low, but it is declining.

Births.

In the first three months of 1876 the births of 229,980 children were registered, a number exceeding that recorded in England and Wales in any preceding quarter, and equal to a rate of 38·0 per 1000 of the estimated population. The highest birth-rate previously returned was 37·5 in the first quarter of 1873. The registration of births was made compulsory in England by the Act which came into operation on 1st January 1875, but it is improbable that the recent large increase in the birth-rate is entirely due to this cause. The birth-rate in the quarter was 1·1 per 1000 in excess of the average rate in the corresponding quarter of the ten years 1866–75; the rates in the first quarters of these ten years ranging between 36·3 in 1872, and 37·5 in 1873. The sex proportion of the children born during the quarter was 104 males to 100 females.

The annual birth-rate in the first quarter of 1876 exceed by 1·5 per 1000 the rate in the corresponding period of 1875. It was lowest, 31·4 and 32·4, in the principally agricultural population of the South-western and South-eastern, and highest, 42·2 and 44·0, in the mining and manufacturing populations of the North-western and Northern Registration Divisions. The county birth-rates ranged from 27·5 and 30·0 in Hereford and Dorset, to 45·8 and 47·4 in Stafford and Durham; the rate was equal to 43·2 and 43·1 in Lancashire and Nottinghamshire, and to 44·2 in Leicestershire. The county rates, compared with those in the March quarter of 1875, showed a decline in Herefordshire, Monmouthshire, and South Wales; in most of the other counties the increase was general, and was exceptionally large in Northamptonshire and Leicestershire.

In the twenty large English towns furnishing weekly returns the birth-rate in the quarter averaged 40·0 per 1000, was 2·0 above the rate in the whole of England and Wales, and exceeded by 0·7 that which prevailed in eighteen of these towns during the same period of 1875. The birth-rates in these twenty towns (in the quarter under notice) ranged from 30·7 and 31·1 in Brighton and Plymouth, to 46·1, 46·6, and 50·9 in Oldham, Leicester, and Salford, respectively. In fifty other large towns the birth-rate averaged 39·8 per 1000; it was so low as 25·7 and 26·6 in Cheltenham and Bath, and ranged upwards to 51·3 and 51·5 in Wigan and Dudley.

Movement of the Population.

The natural increase to the population of England and Wales, by excess of births over deaths registered during the three months ending 31st March, was 87,711; in the corresponding periods of 1874 and 1875 the excess of births over deaths did not exceed 77,909 and 52,737. The exceptionally high birth-rate and the low death-rate in the first three months of 1876 caused an unusually large natural increase to the population.

Private

27 July 1877

My dear Dr Buchanan

The Metropolitan

Asylum Hospitals are

classed by us as Work-

house Establishments and

not as Hospitals, and

as they receive inmates

from other Districts than

those in which they are

situated they are classed

by a small [illegible] in our

Dr. D. McNamara begs much
apologies as to the
misapprehension of the
Met. Hospitals,
but as they are intended
for Dangerous only, and
are supported out of the
rates, they are Dangerous
Sick Hospitals, & or Mat.
Homes for Infectious diseases

NOTE

We call the Small-pox and
Fever Hospitals at Stockwell and
Homerton ~~a~~ each one institution.

Immediately Returned. Your
note has informed me
that by an over-sight,
a small ~~so~~ has not been
inserted at Hampstead
with the re-opening of the
Small-pox Hospital there

Yours very truly

R. A. Humphreys.

Dr Buchanan

Local Govt Board.

records of Immigration during the quarter are available, but returns issued e Board of Trade afford valuable information relating to Emigration. It rs from these returns that during the three months under notice 17,648 ants left the various ports of the United Kingdom at which emigration officers ationed. So few emigrants have not left our shores in the corresponding er of any year since 1862. Excluding 2464 who were foreigners, and puting proportionally 620 whose nationality was undistinguished, the emigrants itish origin during the quarter were 15,184, including 10,552 English, 1324 h, and 3308 Irish. The proportions of emigrants to a million of the population respectively, 435 in England, 375 in Scotland, and 622 in Ireland. The ation from each part of the United Kingdom was considerably below the ge. Irish emigration showed so marked a decline in 1875, that it fell below ecorded *natural* increase of the population, or excess of births over deaths, ne Registrar-General of Ireland estimates that there was an *actual* increase population during the year for the first time since 1845, when the island had ulation exceeding by three millions that of the present day. Of the 15,184 h emigrants during the first three months of 1876, 54 per cent. left for the d States, 32 per cent. for the Australian Colonies, 2 per cent. for British North ica, and 12 per cent. for all other places. The number of emigrants to the d States, which was 32,660 in the first quarter of 1872 has since steadily ed, and was but 10,354 in the corresponding period of 1876.

Prices, Pauperism, and Meteorology.

e average price of wheat during the quarter was 43*s.* 8*d.*, and showed a er decline of 2*s.* 11*d.* from that which prevailed in the last quarter of ; it exceeded, however, by 1*s.* 2*d.* the average price in the first three months at year. The mean price of the best potatoes in the quarter averaged 136*s.* 6*d.* on in the Borough and Spitalfields markets, against 119*s.* 6*d.* and 96*s.* 3*d.* in orresponding quarters of 1874 and 1875. The mean price of beef by the se at the Metropolitan Meat Market averaged $6\frac{3}{4}d.$, and of mutton $7\frac{1}{4}d.$ Each ese mean prices showed a slight decline from those which prevailed in the ding three months; the price of mutton is, however, still nearly a penny a l higher than it was in the first quarter of 1875. The average price per ton e best seaborne coal in the London market, put in barge from the collier in the nes, was 19*s.* 9*d.* against 33*s.* 1*d.*, 23*s.* 5*d.*, and 22*s.* 5*d.* in the three preceding cor- nding quarters. The average price of consols during the quarter was 94*l.* 2*s.* 6*d.*, was 5*s.* per cent. below the average price during each of the last two quarters 875, when it was higher than the average in any quarter since the fourth of . The average minimum rate of discount charged by the Bank of England g the three months ending 31st March was 4*l.* 3*s.* 6*d.*, showing a considerable ase upon the average rate in the preceding quarter.

e average number of paupers relieved on the last day of each week in the er was 703,188, of which 145,189 received in-door and 557,999 out-door relief. number of in-door paupers was one per cent. less than in the corresponding months of 1875; the decline of paupers receiving out-door relief was equal to per cent. The average weekly number of paupers (in-door and out-door), h was 978,001 in 1870, has since steadily declined, and in 1875 did not exceed 08. The decrease of pauperism in these five years was equal to 27 per cent.; ecline in the number of in-door paupers during this period was ten per cent., of out-door paupers thirty per cent. In 1870 there were 5·5 out-door to each or pauper; in 1875 this proportion had declined to 4·3, and in the first three hs of 1876 it was but 3·8.

marks upon the meteorology of the quarter, and accompanying tables, fur- d by Mr. James Glaisher, F.R.S., will be found on pp. 65–72. The first four of the year were warm, the temperature showing a mean daily excess of y 6°. From 5th to 16th January a cold period prevailed, and the mean erature averaged a defect of nearly 7°; a warm period then set in, and con- d until 3rd February, followed by nine days cold weather. From 14th February h March the temperature was generally in excess, but on 9th, a third cold d commenced, and lasted until 27th. The last four days of March were

warm. Mr. Glaisher calls attention to the remarkable alternations of temperature in each month of the quarter. The mean temperature, below the average on 43, showed an excess on 48 of the 91 days in the quarter. As evidence of the extremes of temperature which prevailed, it may be mentioned that the average deficiency on the 43 days of low temperature was 5°·4, and the average excess on the 48 warm days was 5°·7. The mean temperature of the quarter was 39°·8 and 1°·0 above the average for the corresponding period in 105 years. In January the mean was 37°·1, and both in February and March 41°·1; the mean showed an excess of 2°·5 in February, whereas it differed but slightly from the average in January and March. The mean temperature of the quarter at 50 stations of observation ranged from 34°·4 at Allenheads (Northumberland), to 44°·9 at Helston (Cornwall).

An unusual amount of snow fell generally during the cold periods of the quarter, and rain fell frequently during the warm periods. The amount of rain and melted snow measured during the quarter at Greenwich did not, however, exceed 4·9 inches, which corresponded with the average amount in 61 years; the amounts in inches were 1·1 in January, 1·5 in February, and 2·3 in March. A deficiency of rain in January was balanced by an excess in March. At each of the other stations of observation the rain-fall of the quarter exceeded that recorded at the Greenwich Observatory, and ranged from 5·0 inches at East Tilbury, to 13·7 and 15·5 inches respectively at Stonyhurst and Allenheads. The average rain-fall at all the 50 stations of observation between latitude 50° and 55° was 8·2 inches, against 6·3 and 6·6 inches in the corresponding periods of 1874 and 1875. Between latitude 54° and 55° the average rain-fall last quarter was 9·5 inches, whereas between 51° and 52° it did not exceed 7·0 inches. The rain-fall in the 13 weeks ending 1st April in those of the twenty large English towns for which returns are furnished, ranged from 4·7 inches in Sunderland to 11·6 inches in Bristol.

State of the Public Health; Deaths.

During the first three months of 1876 the deaths registered in England and Wales were 142,269, and equal to an annual rate of 23·5 per 1000 of the estimated population. This death-rate was 4 per 1000 lower than the exceptionally high rate in the first quarter of 1875, and 1·1 below the average rate in the corresponding quarters of the ten years 1866–75. The annual death-rates in the first quarters of the 38 years 1838–75 ranged from 29·1 in 1855, when the mean temperature was 34°·1, to 21·9 in the corresponding period of 1868, during which the mean temperature was 41°·4. During the first three months of 1855 the lowest recorded temperature of the air at the Royal Observatory at Greenwich was below the freezing point of water on 56 days, these 56 lowest readings showing in the aggregate 405° of frost, and an average of 7°·2. In the corresponding period of 1868 the lowest reading of the thermometer was below the freezing point on only 24 days; the aggregate degrees of frost were but 85, equal to an average of 3°·5. In the first three months of 1876 the aggregate degrees of frost recorded on 37 days were 181, showing an average of 4°·9. Thus the effects of protracted cold are manifest in the winter death-rates.

The 142,269 deaths included 73,658 of males and 68,611 of females; the male death-rate was equal to 25·0, and the female rate to 22·1 per 1000 living. In equal numbers living, the deaths of males in the quarter were as 113 to each 100 deaths of females, showing a proportionately larger excess in the male death-rate than in the last quarter of 1875. In Monmouthshire the excess in the male death-rate was exceptionally high, being in the proportion of 119 to 100 of the female rate. In the North Riding of Yorkshire, however, the male death-rate was actually below the female rate, or as 95 to 100. The female rate differed but slightly in these two counties, whereas the male death-rate was 24·4 in Monmouthshire, and only 19·8 in the North Riding.

In the eleven registration Divisions the annual death-rates among persons during the quarter ranged from 19·2 and 20·3 in the principally agricultural counties of the South-eastern and Eastern Divisions, to 23·9 and 29·0 in the York and North-western Divisions, the population in which is principally engaged in manufacture or mining. The lowest county death-rates were 17·7 and 18·4 in

tmorland and Rutland; the highest were 25·9 in Nottingham and 29·8 in easter. Among equal numbers living, 168 persons died during the quarter ancashire, to each 100 that died in Westmorland.

ne excessive death-rate, indicating unsatisfactory sanitary condition, in Lanca-, is one of the most noticeable features in the present return. The estimated lation of the county in the middle of 1876 is 3,072,689, the average density g 2·4 persons per acre. The estimated population of London at the same d is 3,489,428, showing an average density of 46·3 persons per acre. Bearing ind the definite relation between density of population and mortality, the n-rate in Lancashire should be considerably less than that in London. The show very different results. The annual death-rate in London in the first months of 1876 was 24·7 per 1000, whereas it was so high as 29·8 in ashire. Without taking into account the disadvantage which London suffers having a population more than twenty-two times as dense as that of Lanca-, it is evident that if the death-rate in the quarter in this Northern county not exceeded that which prevailed in London, nearly four thousand persons d have survived, whose deaths were recorded in Lancashire, and were due reat measure to the unsatisfactory sanitary condition of its urban population. ay be noticed that the death-rate in the quarter in thirteen Lancashire towns h find a place among seventy of the largest English towns, was equal to 32·7 000. In the remainder of the county, excluding the thirteen large towns, the n-rate averaged 26·6 per 1000, and was higher than in any other English ty except Cumberland, where it was, in this quarter, 27·2 per 1000.

the principal urban population of England and Wales the death-rate in the ter was equal to 25·3 per 1000 of the estimated population, and was 1·3 w the average rate in the same population in the ten preceding corresponding ters. In the remaining or rural population the death-rate was 21·1, and 0·9 w the average. Among an equal number of persons living, 120 died during quarter in the urban districts to each 100 in the rural districts, corresponding the average proportion of deaths in town and country during the first quarters e ten years 1866–75.

twenty of the largest English towns, including London, having an estimated lation little short of seven millions of persons, the death-rate in the quarter ged 26·2 per 1000, against 25·2 and 28·9 in the two preceding corresponding ters, and exceeded the general urban rate by 0·9. The rates in these twenty s ranged from 19·4, 20·3, and 20·6 in Sunderland, Brighton, and Leicester, ·5, 34·1, and 34·6 in Oldham, Manchester, and Salford. Each of the three mentioned towns showed a high death-rate from zymotic diseases, and among ren. In fifty other large English and Welsh towns, having a population of t two millions and three quarters, the death-rate in the three months averaged per 1000, was 1·7 below the average rate in the twenty largest towns, and below the general urban rate. In these fifty towns the lowest death-rates 16·0 in Dover, 17·3 in Middlesborough, 17·9 in Oxford, and 18·7 in tenham and Hastings. The rates exceeding 32 per 1000, were 33·5 in Mac-eld, 34·0 in Preston, 34·4 in Ashton-under-Lyne, 36·0 in Blackburn, and in Carlisle; each of these five towns showed an excessive proportion of tic deaths.

ne 142,269 deaths at all ages included 33,516 of infants under one year of age, l to 146 per 1000 of the births registered, showing a decline of 6 per 1000 the average proportion in the six preceding corresponding quarters. Infant ality, measured in this manner, ranged in the eleven registration Divisions 121 in the principally agricultural South-eastern counties, to 162 in the h-western counties of Lancashire and Cheshire. Infant mortality was but 102 112 per 1000 in Wiltshire and Hampshire, whereas it was 164 in Derbyshire Lancashire, 175 in Nottinghamshire, and 178 in Cumberland. In the twenty English towns this proportion of infant mortality ranged from 108 and 126 in lerland and Norwich, to 187 and 219 in Nottingham and Liverpool. None of high urban rates of infant mortality approach that which prevailed in the of Carlisle, where the deaths of infants under one year of age, partly owing ne fatality of whooping-cough, were in the proportion of 282 per 1000 s. Infant mortality was also excessively high in other parts of Cumberland,

especially in Maryport, Keswick, and Penrith. The decline of infant mortality in Leicester is noteworthy; the proportion in the borough was 130 per 1000, or 24 below the average in the 20 largest towns, and no less than 54 per 1000 below the average proportion in the borough during the corresponding quarter of the three years 1873–4–5. The special inquiry into the causes of the high rate of infant mortality in Leicester, recently conducted and reported upon by Messrs. W. E. Buck and G. C. Franklin, would appear to have already exercised an effect upon the existing evil, although the sanitary defects arising from the complete saturation of the subsoil (attributed to the river being dammed up against the town by mills), and the imperfect sewage outfalls, have probably not yet been remedied.

The annual rate of mortality in the quarter among children and adults, aged between one and 60 years, was equal to 13·2 per 1000 persons living at these ages, and was 1·7 below the rate in the same period of 1875; in the twenty largest towns it averaged 16·0, and ranged from 10·2 and 11·1 in Norwich and Sunderland, to 21·9 in Oldham, 22·8 in Manchester, and 23·1 in Salford. Among persons aged upwards of 60 years, the rate of mortality in the quarter averaged 82·5 per 1000 living, against 89·0, 82·0, and 108·3 respectively, in the three preceding corresponding quarters. In the twenty large towns the annual death-rate among persons at these ages averaged 93·4 per 1000, and ranged from 69·6 and 73·6 in Leicester and Portsmouth, to 112·8 and 148·0 in Manchester and Liverpool. At all ages, the mortality in the twenty large towns was in the proportion of 111 to each 100 in all England; among persons aged upwards of 60 years the proportion was 113 to 100. The death-rate among elderly persons in Liverpool again showed a remarkable excess compared with that in other large towns.

The 142,269 deaths registered in the quarter from all causes included 4209 which were referred to scarlet fever, 3971 to whooping-cough, 2717 to fever, 2518 to measles, 1843 to diarrhœa, 861 to diphtheria, and 262 to small-pox; in all, 16,381 deaths resulted from these seven principal zymotic diseases, equal to an annual rate of 2·7 per 1000. This zymotic rate showed a further decline from that which prevailed in the two preceding corresponding quarters, and was 0·7 below the average zymotic rate in the first quarters of the six years 1870–5. In the eleven Registration Divisions the zymotic death-rates in the quarter ranged from 1·7 in the counties of the Eastern and South-western, to 3·5 in the Metropolitan, and 4·4 in the North-western Divisions. In the twenty largest towns it averaged 3·8 per 1000 (0·8 lower than the rate in Lancashire), and ranged from 1·3 and 1·5 in Norwich and Brighton, to 6·7 in Liverpool, and 7·6 in Salford. Measles and whooping-cough caused the high zymotic rate in Liverpool; small-pox, scarlet fever, and whooping-cough were fatally prevalent in Salford. In the fifty other large towns the zymotic rate averaged 2·7 per 1000, corresponding with the rate in all England; it was but 0·2 and 0·5 in Dover and in Newport (Monmouth), whereas it ranged upwards to 5·0 in Cardiff, 5·6 in Macclesfield, 5·8 in Carlisle, and 8·4 in Blackburn. The high zymotic rate in Macclesfield and Blackburn was principally due to measles; scarlet fever was fatally prevalent in Cardiff, and whooping-cough in Carlisle. The previous epidemic prevalence of typhoid fever, scarlet fever, and measles in Carlisle has been noticed in recent returns.

Scarlet fever, although less fatal than in either of the last two quarters of 1875, again caused in the first three months of 1876 more deaths in England and Wales than any other of the principal zymotic diseases. Epidemic scarlet fever, which was generally quiescent during 1872 and 1873, became fatally prevalent in the last three months of the latter year, and caused a death-rate of 1·04 and 0·84 respectively during 1874 and 1875. The rate from this disease, which was 0·46, 0·91, and 0·86 in the first quarters of the three years 1873–4–5, further declined to 0·70 in the three months now under notice. Scarlet fever, like most other epidemic zymotic diseases, usually shows a far greater fatality in urban than in rural populations. In the first three months of 1876 the annual death-rate from this disease was but 0·35 and 0·42 per 1000 in the agricultural population of the Eastern and South-western Registration Divisions; it was, however, 1·00 in Yorkshire, and 1·04 in the North-western Division, comprising Lancashire and Cheshire. In the twenty large English towns the death-rate from scarlet fever averaged 0·90 per 1000; but few fatal cases occurred in Plymouth or Brighton, whereas the disease caused an annual rate of 2 per 1000 in Bradford, Oldham, and Salford,

3 per 1000 in Bristol. Cardiff was the only one in the list of fifty towns that red severely from scarlet fever, which there caused a rate of 4 per 1000; 160 ns resulted from this disease in Cardiff sub-district during the *six* months ending March 1876. Among the smaller towns and villages in which scarlet fever especially fatal during the quarter may be noted Freemantle (Millbrook), hin, Rothwell, Chard, Waddingham (Market Rasen), Whitworth (Rochdale), nfirth, Wakefield, Marske (Guisbrough), Bootle, Gower, St. Davids, and rug. With reference to the fatality at Freemantle (Millbrook), the local trar remarks that "there is no drainage, and that the water is impure." The mic in Chard is also attributed to the "bad sanitary condition of the town."

he present return shows a further considerable decline in the deaths referred fever," including typhus, enteric or typhoid, and undistinguished forms of fever. annual death-rate from fever in England and Wales averaged 0·93 per 1000 ng the five years 1865–9, declined to 0·64 in the succeeding quinquenniad –4, and to 0·52 in 1875, which was lower than the fever-rate in any year civil registration was established. During the three months now under notice deaths were referred to fever, equal to an annual rate of 0·45 per 1000, reas in the corresponding quarters of the six years 1870–5 the fever-rate had ily declined from 0·75, and averaged 0·63. There appears to be no sufficient n why this continuous and considerable decrease in the mortality from fever ld not be accepted as satisfactory evidence of an average improvement in the ary condition of the English population, especially in towns. The varying ity of fever in different communities, and the local outbreaks which occur from to time, must, however, also be accepted as evidence that this sanitary improve- is unequal, and is in many localities still much needed. The annual death- from fever in the first three months of 1876, as before stated, averaged 0·45 England and Wales; it was only 0·13, 0·17, and 0·17 respectively in the cultural counties of Bedford, Suffolk, and Dorset, whereas it was 0·66 in the t Riding of Yorkshire, 0·68 in South Wales, 0·69 in Durham, and 0·81 in ashire. In twenty of the largest English towns, in most of which sanitary m is steadily progressing, the fever-rate in the quarter averaged 0·44; it was and 0·22 in Brighton and Wolverhampton, whereas it ranged upwards to 0·71 Liverpool, 0·91 in Oldham, and 1·53 in Sheffield. The recent epidemic of r in Sheffield is as instructive as it was disastrous. A considerable part of the ugh was drained many years ago into the river Porter, since which the river been so recklessly polluted by solid refuse as well as liquid impurities that its has been raised to the extent of about five feet, thus burying the outfalls of y of the sewers. The raising of the river-bed undoubtedly contributed to the y floods in the lower parts of the town in October 1875, which deluged the rs and basements of a large number of houses with sewage. A severe outbreak nteric fever followed shortly upon the floods, and caused during the six months ng March 1876 more than 200 deaths, and probably more than 1000 other cases inating, after protracted suffering, in recovery. Among fifty other large towns fever-rate in the quarter exceeded one per 1000 in Wigan, Bolton, Bury, Roch- Blackburn, and Middlesborough; in Blackburn it was equal to 1·71. Many he fatal cases of fever in Bolton, and the 11 returned in the neighbouring regis- on sub-district of Turton, were attributed to the distribution of milk contami- d with typhoid poison from a farm dairy at Eagley. It has been shown that the r-rate in the twenty largest English towns was somewhat below the average in all England. As regards Lancashire, which suffered from the highest county r-rate of the quarter, it is also worthy of note that the rate in Liverpool was w the county average, and that while the rate averaged 0·78 in thirteen of the st Lancashire towns, it was 0·85 in the remainder of the county, including all maller urban aggregations and its rural portions. Fever outbreaks are especially uent in newly aggregated communities, attracted by manufacturing or mining ations; drainage and water supply are in these communities often utterly ected until abnormal disease and death arrest public attention. The high fever s in Lancashire, the West Riding, Durham, and South Wales are undoubtedly to these causes. The registrars' local returns show that an exceptionally high h-rate from fever has recently prevailed in the following places:—Chichester,

Ponder's End (Enfield), Downham (Norfolk), Newark, Stockton, Ystradyfodwg (Glamorgan), and Llanelly (Carmarthen).

The 3971 deaths referred to whooping-cough in the quarter were equal to an annual rate of 0·66 per 1000, which was slightly below the rate in the March quarter of 1875, and scarcely exceeded the average rate in the corresponding quarters of the six years 1870–5. The whooping-cough rate exceeded one per 1000 in London, Nottingham, and Manchester, was over 2 per 1000 in Liverpool and Salford, and equal to 3·3 in Carlisle. This disease was also especially fatal in Willesden, Rochford, Cheadle, Ulverston, and Lofthouse.

Measles was more fatal than in any quarter of 1875, and caused an annual death-rate of 0·42 per 1000 ; this rate was higher than in any quarter since the first two of 1874, when it was equal to 0·65 and 0·63 per 1000. No fatal case of measles occurred during the quarter in the counties of Huntingdon, Cambridge, Hereford, or Westmorland, whereas the disease was severely epidemic at Sutton, Richmond, East Stonehouse, Cullompton, Newcastle-under-Lyme, Liverpool, Blackburn, and Todmorden. The outbreak of measles caused 114 deaths in Blackburn, where an excessive mortality from fever and other zymotic diseases also occurred. The death-rate in this town from the seven principal zymotic diseases during the quarter, it has been noted, was equal to 8·4 per 1000. Blackburn is a town of about 80,000 inhabitants, and the Town Council, as the sanitary authority, has fixed the salary of their medical officer of health at 25*l.* per annum.

The deaths from diarrhœa were 1843, and differed but slightly from the number in recent corresponding quarters.

The 861 deaths from diphtheria were slightly less numerous than those in the first quarter of 1875. The disease showed a proportionately large fatality in the South-eastern counties, and local outbreaks occurred at Walton and Chertsey, Great Coggleshall, Ashwellthorpe, Horningsham (Wilts), Porlock (Somersetshire), Chalford (Gloucestershire), Ludlow, Penkridge, Loxley (Warwickshire), Caistor, Gainsborough, North Cave (near Hull), and Llanrwst. Both drainage and water supply in North Cave are reported defective.

The quarterly number of deaths referred to small-pox in England and Wales, which after March 1874 steadily declined from 655 to 149 in the last three months of 1875, rose to 262 in the first quarter of 1876. The increase in the deaths from this disease was entirely due to its fatal prevalence in and around Manchester and Salford, resulting in 169 deaths. In the Monsall Fever Hospital, near Manchester, 46 fatal cases of small-pox were registered, of which 33 were unvaccinated ; of the other 13, six bore but one scar. In other parts of Lancashire 40 deaths from small-pox were recorded, including 20 in Liverpool, and 7 in Bolton district. In the whole of England and Wales, exclusive of Lancashire, only 53 fatal cases of small-pox were reported, of which 13 occurred in Bristol and Clifton, and 7 in London. At Llanrug in North Wales were registered three fatal cases, which occurred in a family recently arrived from America. But for the fatal prevalence of the disease in and around Manchester and Salford, the deaths from small-pox in England and Wales in the first quarter of 1876 would have been fewer than in any quarter since the commencement of civil registration, previous to which no reliable records of causes of death existed.

In workhouse establishments, hospitals, and public lunatic asylums, 13,028, or 9·2 per cent. of the deaths in the quarter were registered, against 9·4 per cent. in the corresponding quarter of 1875. In twenty of the largest English towns 6474 deaths in institutions were recorded, or 14·3 per cent. of the total deaths, whereas the proportion in the rest of England was only 6·8 per cent. The proportion of institution deaths in the twenty large towns ranged from 6·6 per cent. in Bradford and 7·4 in Leeds and Plymouth, to 16·0 in Manchester and Wolverhampton, and 17·5 in London.

To different forms of violence 4523 deaths were referred in England and Wales, equal to an annual rate of 0·75 per 1000 persons estimated to be living, differing but slightly from the rate in the corresponding quarter of 1875. The fact, however, that more than three per cent. of the deaths from all causes in England and Wales resulted directly from violence deserves more attention than it receives. The death-rate from violence in the quarter was only 0·50 in the South-eastern Registration

sion, and was 0·85 and 0·89 respectively in the Northern and North-western sions. In the twenty large English towns the death-rate from violence aged 0·90 per 1000, and ranged from 0·32 and 0·44 in Portsmouth and outh, to 1·39, 1·48, and 1·49, respectively in Birmingham, Liverpool, and verhampton. A portion of the high death-rate from violence in some large is is due to deaths in hospital of patients admitted from the surrounding rural icts.

uring the three months 7214, or 5·1 per cent., of the deaths were registered the certificates of coroners. The proportion of inquest cases to total deaths ngland and Wales in the two preceding corresponding quarters was 5·0 and per cent. In the twenty large towns the proportion of inquest cases averaged per cent., and ranged from 2·6 in Sheffield to 9·8 in Leicester. Thus the portion of inquests held during the quarter was nearly four times as high in ester as in Sheffield, although the death-rate from violence in the two towns not vary considerably. There is a remarkable want of uniformity in the m upon which inquests are held, or declared to be unnecessary, in different s of the country. In one of the sub-districts of Penrith (Cumberland) four ns from violence were registered during the quarter, the causes being entered in register as "Burn of chest, 18 days;" "fracture of skull," the body being d on a railway; "compound fracture of the skull, &c.," caused by the kick of a e; and "struck by an engine passing along the line." No inquest was held in of these four cases, and it naturally follows that if inquests were unnecessary ese cases, half the inquests held in England and Wales must be unnecessary.

Health of Foreign Cities.

summary of the weekly returns with which the Registrar General is favoured arious local authorities shows that the average annual death-rate during the quarter of 1876, in twenty-two Indian and Foreign cities, was 30·2 per 1000, nst 26·2 in twenty of the largest English towns. The population of these nty-two Foreign cities is estimated at ten millions of persons. The death- in these cities ranged from 23·6 and 24·5 in Philadelphia and Hamburg, to and 40·2 in Alexandria and Buda-Pesth. Cholera caused, in the thirteen s taken to represent the quarter, 585 deaths in Calcutta and 530 in Madras; l-pox 1977 deaths in Bombay and 319 in Vienna. In Rome 440 deaths were red to "eruptive fever." Diphtheria was fatally prevalent in Berlin, New k, Philadelphia and Boston. Of 543 deaths in Christiania, no less than 137 ore than 25 per cent. were referred to scarlet fever.

Furnished by the Chief Cashier of the Bank of England.
As published by the Comptroller of Corn Returns to the Board of Trade.
These are the average prices at which seaborne Newcastle, Sunderland, and Hartlepool coals are put in e from the collier in the Thames; the difference between these prices and those charged to the con- er represents the cost of distribution and merchant's profit. These figures are derived from returns ch have been supplied by Mr. Richard Meade of the Mining Record Office.

				Sept.	17·0	16·4	19·4	16·7	18·4	17·3	17·0	15·9	17·4	17·2	17·3	—
				Dec.	18·1	17·7	18·4	19·0	19·2	19·5	17·6	17·9	20·2	18·9	18·7	—

Note.—The three months January, February, March, contain 90, and in leap year, 91 days; the three months April, May, June, 91 days; and each of the last two quarters of the year, 92 days. For this inequality a correction is made in calculating the rate of mortality in the different quarters of the year. The annual rate is the mean of the four quarterly rates.

TABLE VI.—**Population; Births, Deaths; Mean Temperature** and **Rainfall;** in the **First Quarter** of **1876,** in **Twenty-three Large Towns.**

Cities and Boroughs.	Estimated Population in the Middle of the Year 1876.*	Persons to an Acre. (1876.)	Births in 13 Weeks ending 1st April 1876.	Deaths in 13 Weeks ending 1st April 1876. Note.—The deaths in Manchester and Bristol include paupers belonging to these cities who died in Workhouses situate outside the Municipal boundaries.

* The figures for the English towns are the numbers enumerated in April 1871, raised to the middle of 1876 by the addition of five years and a quarter's increase, calculated on the rate which prevailed between 1861 and 1871. The population of Dublin is taken as stationary at the number enumerated in April 1871.

E VII.—**Deaths** in **20 large English Towns** in the 13 Weeks ending 1st April 1876.

588	Swansea - - - M -	72,359	870	444	48·2	24·6	2·7	Swansea and Llangafelach, and Llansamlet (Neath) Sub-dists

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the last column approximately represent, are Municipal or Parliamentary.

* For method of framing these estimates see note * to Table VI. As the population of Devonport, Coventry, Macclesfield, and Ashton-under-Lyne declined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the present population of Dudley and Wigan have been based upon local information as to the increase of the inhabited houses in these two boroughs between 1871 and 1875.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in Convalescent Hospitals and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the towns, or by the exclusion of, or addition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where the Workhouse is situate outside that area.

e.—In estimating the population of these Districts, upon which the birth and death-rates have been ated, it has been assumed that the rate of increase since 1871 has been the same as that which prevailed en 1861 and 1871. In calculating the rates of mortality for this Table a proportion of the deaths led in the two Middlesex County Lunatic Asylums, situated in the Districts of Uxbridge and Barnet, has excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder buted among the Middlesex Districts in the Outer Ring.

BLE XI.—**Births** and **Deaths** in the **First Quarter** of 1876 in **22 Foreign Cities.**

* The *Registration* or *Union Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with th
Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principa
town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ more o
less from the boundaries of Counties (proper).

† The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

‡ See page 14, note †.

Note.—*The Registrars alone must be considered responsible for the opinions expressed in the foot notes respecting the prevalence of epidem diseases, also as to the statements respecting sanitary arrangements, &c. &c.*

* The *Superintendent Registrars' Districts* are collections of contiguous Parishes or Places, nearly always identical with the Poor Law Unions of the same names; they are 631 in number, and are here arranged topographically under the Registration Counties.

† These figures have been furnished to the Registrar-General by the Ordnance Survey Department. They do not include space occupied by foreshore or tidal water of rivers and creeks.

‡ See page 14, note †.

—SOUTH EASTERN COUNTIES.—SUPERINTENDENT REGISTRARS' DISTRICTS—*continued.*

perintendent trars' Districts.	Area in Statute Acres.	Enumerated Population, 1871.	Marriages Registered in Quarter ending 31 Dec. 1875.	Births Registered in Quarter ending 31 Mar. 1876.	Deaths *Average in Quarters ending 31 March in the 3 Years 1873-75.*	Deaths Registered in Quarter ending 31 Mar. 1876.	The DEATHS in the Quarter are stated by the Registrars to include: Deaths of Children under 1 Year of Age.	Deaths of Persons aged 60 Years & upwards.	Deaths from Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhœa.	Cholera.	Violence.	Inquest Cases.	Deaths in Public Institutions.

esent number of Superintendent Registrars' districts is 631. The above numerical arrangement—1 to 627—was adopted on 1871. Five new Superintendent Registrars' districts, viz., Fulham (1*a*), Prestwich (467*a*), Middlesborough (532*a*), Lan-, and Pontardawe (587*a*), have been constituted; and Shrewsbury (352) has been incorporated with Atcham (351).

I.—LONDON.—Registration Sub-districts.

* The *Sub-districts* (2193 in number) are sub-divisions of *Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

† For London the numbers of Births and Deaths, as well as the details given, "Children under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks, viz., from 2nd January to 1st April 1876.

I.—LONDON.—Registration Sub-districts—*continued.*

No fresh case of scarlet fever has occurred since the middle of February.
The Registrar says scarlet fever has slightly abated, but that there are still a great many cases, more particularly in the Fens.
The Registrar says scarlet fever is abating.
The deaths include the drowning of 13 boys, caused by the burning of the training ship "Goliath." The 3 deaths from fever the same family.

IV.—EASTERN COUNTIES.—Registration Sub-districts—*continued.*

Of the 5 deaths from fever, 2 were described as typhoid or enteric, and 2 as low fever.
The Registrar says scarlet fever has abated in Crudwell where the disease has been prevalent.
The sub-district of Devizes includes the parishes and places which, prior to 1st January 1876, formed the sub-district of ings.
The 6 deaths from diphtheria occurred in Horningsham; 3 more deaths from the same disease were registered in April, but believes there are now no more cases.

The Registrar says a mild form of scarlet fever prevails.
The Registrar says measles was very prevalent in Topsham during the months of January and February, but has now

Of the 18 deaths from scarlet fever, 10 were registered in January, 5 in February, and 3 in March.
Of the 34 deaths in Public Institutions, 28 occurred in the Royal Naval Hospital.

†The death of a female was registered whose age was stated to be 100 years.
‡The 6 deaths from diphtheria occurred in the township of Penkridge; 2 in February and 4 in March.
§Of the 70 deaths in Public Institutions, 31 occurred in the South Staffordshire Hospital.
‖The Registrar believes his sub-district to be fast increasing in population through the opening of new mines and works.

VI.—WEST MIDLAND COUNTIES.—Registration Sub-districts—*continued.*

teric fever is prevalent in Bickerstaffe.
the 4 deaths from fever which were described as typhoid, 3 occurred in the township of Upholland.
e last death from scarlet fever was registered on the 19th January. The death from small-pox occurred in the township of
disease is supposed to have been imported from Manchester.
the 4 deaths from typhoid fever, 3 occurred in one house, where other inmates are still suffering from the same disease.
e 11 deaths from typhoid fever were supposed to be caused by the contamination of milk with sewage water, supplied from
gley. The Registrar also says there are now no cases of scarlet fever in his sub-district.

VIII.—NORTH WESTERN COUNTIES.—Registration Sub-districts—*continued.*

Registration Sub-districts.	Area in Statute Acres.	Enumerated Population, 1871.	Births: Registered in the Quarter ending 31 March 1876.	Deaths: *Average in Quarters ending 31 March in the 3 Years 1873-75.*	Deaths: Registered in the Quarter ending 31 March 1876. ARKS ON THE WEATHER DURING THE QUARTER ENDING MARCH 31ST, 1876.

By JAMES GLAISHER, ESQ., F.R.S., *&c.*

anuary 4th, the weather was warm, the average excess of mean daily temperature was 6° and on the 3rd day was as large as $13\frac{1}{2}$°. On the 5th, the wind changed from the W. S.E. and the first long cold period set in, and continued till the 16th, the wind being, most part, from the N. and N.E., on the 8th day the departure of mean temperature s average was $13\frac{1}{2}$°, and the average defect of temperature for these 12 days was $6\frac{3}{4}$°. 17th the wind was S.W. and a warm period set in and continued till February 3rd, the ing, for the most part, from the S.S.W. and S.E., the average daily excess of temperature ; the second cold period began on February 4th and continued till the 13th ; the wind efly from the N., on the 11th the mean temperature of the day was nearly $13\frac{1}{2}$° below its ; and for the 10 days ending the 13th was on the average $6\frac{3}{4}$° in defect.

the 14th of February to the 8th of March, the temperature was mostly in excess of rage, and the direction of the wind was generally from the S.W. ; on the 17th and 18th uary the mean temperatures were about 12° in excess of their averages, and on March excess was more than 10°, and for the 24 days ending March 8th, the average daily was $6\frac{1}{4}$°. On the 9th day of March the third long cold period began, and continued to n, the direction of the wind was mostly from the W.N.W. and N.E., and the average ficiency of temperature for the 19 days was $3\frac{3}{4}$°. On the 19th of March the deficiency erature exceeded 10° ; from March 28th to the end of the quarter the weather was nd the mean daily temperatures of the four days were $5\frac{1}{2}$° in excess of their averages.

AXIMUM and MINIMUM TEMPERATURES of the AIR, on certain days in January, February, and March 1876.

oking over this Table, it will be seen how very great the changes of temperature have been the country, in each month of the quarter.

very day in the three cold periods, *snow* fell in some part of the country, and during the eriods, rain fell very frequently. From February 13th to March 15th rain or snow fell

on 25 days, or on more than 25 days, at every one of the different stations. The weather during the quarter has been remarkable for an excess of atmospheric pressure in January and great deficiency from February 5th to the end of the quarter, for the amounts of snow, and for the great alternations of temperature in each month. These great changes are exhibited in the preceding Table which gives the maximum and minimum temperatures of the warmest and coldest days in each month.

The readings of the barometer at 160 feet above the level of the sea, in the neighbourhood of London, were above their respective averages throughout the month of January, excepting on two days, viz., 20th and 21st which were 0·08 in. and 0·26 in. below. The greatest departure in excess during the month was 0·72 in. on the 15th. The mean reading for the month was 30·095 ins., being 0·355 in. above its average. During the first four days of February, the barometer readings were a little in excess of the average, but from the 5th day of February to the 1st of April, the readings were all below their average values (excepting on two days), viz., February 24th and March 20th, which were above their averages, but only to the small amounts of 0·08 in. and 0·05 in.

During this remarkable and long continued period of 57 days of low readings, violent gales of wind, and showers of hail, rain, and snow were experienced. The following are some of the greatest departures in defect of the average during this period:—February 18th and 19th 0·58 in. and 0·56 in.; March 8th, 9th, 10th, 11th, 12th, 15th, and 28th; or 0·66 in., 1·31 in., 1·36 in., 0·95 in., 1·30 in., 0·74 in., and 0·72 in., respectively on these days. The readings were the lowest from March 8th to the 12th, and for these five days, the mean defect below the average was no less than 1·12 ins., and for the whole period of 57 days, the mean defect was 0·35 in.

The mean reading for the month of February was 29·628 ins., being 0·171 in. below the average.

Back to the year 1841 there are only five instances of the mean reading of the barometer being as low in the month of February, as in the present year, viz.:—

1843, 29·473 ins. 1844, 29·498 ins. 1848, 29·517 ins.
1855, 29·593 ins. 1866, 29.529 ins.

The mean reading of the barometer, for the month of March, was 29·391 ins., being 0·359 in. below the average; and in the preceding 35 years there is no value so low as that in the present year, the nearest approach being in the year 1862, when it was 29·498 ins.

At Greenwich *the mean temperature* of January was 1°·6 lower than that of December; that of February was 4°·0 higher than that of January; and that of March was the same as that of February. (From the preceding 35 years' observations the mean temperature of January below that of December is 1°·5; that of February above that of January is 0°·6; and that of March above that of February is 2°·5.)

The mean temperature of the air for January below that of December; South of latitude $51\frac{1}{2}°$ was 1°·4; from $51\frac{1}{2}°$ to $53\frac{1}{2}°$ was 2°·2; from $53\frac{1}{2}°$ to $53\frac{3}{4}°$ was 1°·4; and from $53\frac{3}{4}°$ to 55° was 0°·3 only. That of February above that of January, South of $50\frac{3}{4}°$ was 2°·8; from $50\frac{3}{4}°$ to $52\frac{1}{2}°$ was 4°·0; from $52\frac{1}{2}°$ to $53\frac{3}{4}°$ was 2°·0; and from $53\frac{3}{4}$ to 55° was 0°·1 below. That of March below that of February was 1°·2 at places South of $50\frac{3}{4}°$; and from $50\frac{3}{4}°$ to 55° was 0°·3, below the general decrease of mean temperature from February to March all over the country was 0°·4.

The mean temperature of the air for January was 37°·1, being 0°·6 above the average of the preceding 105 years, and 1°·5 below the average of the preceding 35 years; it was 4°·6 and 6°·3 below the corresponding values in 1874 and 1875.

The mean temperature of the air for February was 41°·1, being 2°·5 and 1°·9 higher than the average of the preceding 105 years and 35 years respectively; it was 2°·4 and 6°·1 higher than the corresponding values in 1874 and 1875.

The mean temperature of the air for March was 41°·1, being the same as the average value for the preceding 105 years, and 0°·6 below the average of the preceding 35 years; it was 2°·6 lower than that of 1874, and 0°·9 higher than that of 1875.

The mean high day temperatures of the air were 0°·7 and 0°·8 below their respective averages in January and March; but 1°·3 above in February.

The mean low night temperatures of the air were 2°·7 and 0°·2 lower than their respective averages in January and March; but 2°·2 above in February.

The mean daily ranges of temperature were 0°·9 and 0°·6 smaller than their respective averages in February and March; but 2°·0 larger in January.

Therefore the days and nights of January and March were cold, but warm in February.

At Greenwich the increase of atmospheric pressure from December to January was 0·158 in., the decrease from January to February was 0·467 in., and the decrease from February to March was 0·237 in. Over the whole country the mean increase of pressure from December to January was 0·161 in.; the decrease from Jannary to February was 0·475 in., being somewhat smaller at Southern stations, and somewhat larger at Northern stations; the mean decrease from February to March was 0·229 in., and was nearly the same at all stations.

At Greenwich the fall of rain in January was 1·1 in. being 0·8 ins. below its average; in February it was 1·5 in. being equal to the average value; and in March the fall was 2·3 ins., being 0·7 in. above the average; the heaviest fall in one day was 0·68 in. on the 12th of March. The total fall in the quarter was 4·9 ins., being exactly equal to the average. Rain fell on 50 days, exceeding the average number in these 3 months by 20 days, the distribution of the rain over the quarter has been therefore very different from what is usual, and this seems to have been more or less the case all over the country.

Thunderstorms occurred, on 5 days in February; and on 9 days in March.

Thunder was heard, but lightning was not seen, on 2 days in February; and on 6 days in March.

Lightning was seen, but thunder was not heard, on 1 day in February; and on 4 days in March.

Solar halos were seen on 3 days in January; 11 days in February; and on 10 days in March.

average duration of the different directions of the wind referred to eight points of the and the duration of each direction in each month in the quarter, were as follows:—

	January.			February.			March.		
	Average.	1876.	Departure from Average.	Average.	1876.	Departure from Average.	Average.	1876.	Departure from Average.
	d.	d.	d.	d.	d.	d.	d.	d.	d.

	2¾	0	−2¾	2¾	0	−2¾	2½	0	−2½

+ signs denote excesses over averages; in the month of January the largest numbers with this sign are N.E., E. and S., in February to W., and in March to S. and W.
− signs denote below averages; in January the largest number with this sign is S.W., uary is E., and in March is S.E.

In reading this table it will be borne in mind that the minus sign (−) signifies *below* the average, and that the (+) signifies *above* the average.

halos were seen on 5 nights in January; 6 nights in February; and on 13 nights in March.
æ boreales were seen on the 19th of February at Calcethorpe, Liverpool, and North Shields.
fell on 15 days during January; 18 days during February; and on 19 days during thus making 52 during the quarter. The falls in January and February were pretty all over the country, but in March the heaviest falls were in the Midland and Northern 3. At some places in March snow fell consecutively from the 6th to the 22nd.
fell at one or other station on 7 days in January; 17 days in February; and on 20 days n.
revailed on 20 days in January; 11 days in February; and on 7 days in March.
buds first appeared on the Sycamore, on the 27th of February at Strathfield Turgiss.
buds first appeared on the Horsechestnut, on the 26th of February at Helston; on the 7th n at Strathfield Turgiss; on the 12th at Caterham; on the 20th at Guernsey; and on the Weybridge.
buds first appeared on the Hawthorn, on the 15th of February at Weybridge.
Elm in leaf, on the 8th of March at Helston.
horn in leaf, on the 9th of March at Oxford; on the 10th at Helston; on the 20th at y; and on the 24th at Weybridge.
in blossom, on the 22nd of February at Helston; and on the 21st of March at Llandudno.
in blossom, on the 23rd of February at Helston; on the 14th of March at Oxford; and on Wisbech.
in blossom, on the 17th of March at Strathfield Turgiss; on the 24th at Llandudno; and 8th at Oxford.
leck arrived, on the 31st of March at Guernsey.
cock departed, on the 25th of February from Strathfield Turgiss.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING MARCH 31ST, 1876.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the fifth edition of his Hygrometrical Tables.

Names of Stations and Observers.	Height of Station above Sea Level.	Year 1876. Months.	Pressure of Atmosphere in Month. Mean.	Pressure of Atmosphere in Month. Range.	Temperature of Air in Month. Note.—*The Barometer Reading*, Leeds, 1st January, 4h. p.m., 29·084 in., has been altered to 30·084 in.
" " Taunton, 29th February, 9h. a.m., 30·772 in., " 29·772 in.
" " Holkham, 11th March, 3h. p.m., 29·978 in., " 28·978 in.
" " Bournemouth, 21st " 9h. a.m., 30·95 in., " 29·95 in.

Second Rain-gauges are placed—				January.		February.		March.		Total during the Quarter.
At Eastbourne,	at the height of	160 feet	*above the sea*, the amount collected was	1·36 inches.	-	3·20 inches.	-	3·01 inches.	-	7·57 inches.
At Beckenham,	at the height of	50 feet	*above the ground*, the amount collected was	0·63 "	-	1·72 "	-	2·50 "	-	4·85 "
" Strathfield Turgiss,	"	38 feet	" "	0·48 "	-	1·28 "	-	2·24 "	-	4·00 "
" Oxford,	"	22 feet	" "	1·45 "	-	2·62 "	-	3·10 "	-	7·17 "
" Cardington,	"	36 feet	" "	1·30 "	-	1·75 "	-	1·80 "	-	4·85 "
" Wisbech,	"	8 feet	" "	2·07 "	-	2·24 "	-	2·69 "	-	7·00 "
" Nottingham,	"	39 feet	" "	2·05 "	-	1·78 "	-	2·44 "	-	6·27 "
" Holkham,	"	4 feet	" "	1·74 "	-	2·92 "	-	2·39 "	-	7·05 "
" Eccles (Manchester),	"	34 feet	" "	1·41 "	-	3·23 "	-	2·93 "	-	7·57 "
" Milltown (Ireland),	"	40 feet	" "	0·85 "	-	— "		2·78 "	-	— "

NAMES OF STATIONS.	Mean Pressure of dry Air reduced to the level of the Sea.	Highest Reading of the Thermometer.	Lowest Reading of the Thermometer.	Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	Wind. Mean Estimated Strength.	Wind. Relative Proportion of N.	E.	S.	W.	Mean Amount of Ozone.	Mean Amount of Cloud.	Rain. Mean Number of Days on which it fell.	Rain. Mean Amount collected.

The highest temperatures of the air were at Blackheath, 65°·9; and at East Tilbury, 65°.
The lowest temperatures of the air were at Beckenham and Lampeter, both 10°; and at Allenheads, 13°·5.
The greatest daily ranges of the temperatures of the air were at Holkham, 14°·9; and at Salisbury, 14°·6.
The least daily ranges of the temperatures of the air were at Guernsey, 7°·9; and at Hastings, 8°·1.
The greatest numbers of rainy days were at Bywell, 69; Nottingham, 68; and at Allenheads, 66.
The least numbers of rainy days were at Ramsgate, 41; and at Chiswick, 42.
The heaviest falls of rain were at Allenheads, 15·49 inches; and at Stonyhurst, 13·70 inches.
The least falls of rain were at East Tilbury, 4·95 inches; and at North Shields, 5·14 inches.

Quarterly Meteorological Table for different Parallels of Latitude.

PARALLELS OF LATITUDE, &c.	Mean Pressure of dry Air reduced to the level of the Sea.	Mean of all Highest Readings of the Thermometer.	Mean of all Lowest Readings of the Thermometer.	Mean Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	Wind. Mean Estimated Strength.	Wind. Relative Proportion of N.	E.	S.	W.	Mean Amount of Ozone.	Mean Amount of Cloud.	Rain. Mean Number of Days it fell.	Rain. Mean Amount collected.

QUARTERLY RETURN

OF

ARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

ISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

).] **Marriages**—*January, February, March,* 1876.
Births and **Deaths**—*April, May, June,* 1876. [Price 9*d.*

General Register Office, Somerset House,
1st August 1876.

e UNITED KINGDOM the *births* of 296,350 children, and the *deaths* of 171,082 of both sexes, were registered in the three months ending 30th June The recorded natural increase of population was thus 125,268.

registered number of persons married in the quarter ending 31st March as 117,760.

resident population of the United Kingdom in the middle of 1876 is esti- at 33,093,439; that of England and Wales at 24,244,010, of Scotland 7,811, and of Ireland at 5,321,618. The birth-rate in the United Kingdom *second* quarter of 1876 was 35·9 per 1000, and the death-rate 20·7. The e-rate in the *first* quarter of 1876 was 14·3 per 1000.

several facts concerning Scotland and Ireland are recorded in the Quarterly s of the Registrars General of those parts of the United Kingdom.

ENGLAND.

Return comprises the BIRTHS and DEATHS registered by 2192 Registrars he districts of England during the quarter ending 30th June and the AGES in 13,688 churches or chapels, in 7646 registered places of worship ected with the Established Church, and in 631 Superintendent Registrars' in the three months ending 31st March 1876.

population is increasing faster than usual by the excess of births over and by the decrease of emigration. Marriages in the winter quarter that n March were at the average rate; the low rate in the agricultural being balanced by the higher rate in the manufacturing counties. The births in ng quarter that ended in June exceeded the average, and the excess, though lue to the amendment of the Act which now enforces registration, is pro- ot wholly due to that cause. The country has been healthy; the mortality the average of the season, and below the average of the year. Measles, places of a bad form, was a prevailing epidemic. Money is cheap; the coal has fallen; wheat is rather dearer than it was; the price of potatoes higher than it was last year; mutton is still dearer than usual, and its nsiderably exceeds the price of beef.

Marriages.

During the first three months of this year 83,514 persons were married in England and Wales, the marriage-rate being equal 13·8 per 1000 persons living. This rate corresponded with the average rate in the ten preceding corresponding quarters, although it showed a marked decline from the high rates which prevailed in the first quarters of the four years 1872–3–4–5. The marriage-rate in the quarter ending 31st March last was but 9·0 and 9·6, respectively, in the agricultural counties of the South-midland and Eastern Registration Divisions, whereas it was 16·2 and 17·4 in the Yorkshire and North-western Divisions. The lowest county marriage-rates in the quarter were 6·8 in the extra-metropolitan portion of Middlesex, and 7·9 in Cambridgeshire; the highest rate was 18·0, both in Lancashire and the East Riding of Yorkshire.

Compared with the average number of marriages returned in the three preceding corresponding quarters, those in the first quarter of this year showed an increase of only 0·3 per cent., and if the increase of population be taken into account, they had decreased more than three per cent. The number of marriages exceeded the uncorrected average in the three preceding corresponding quarters by 19 per cent. in Hertfordshire, 18 per cent. in Sussex, and 8 per cent. in Dorsetshire and the East Riding of Yorkshire. The decrease of marriages was equal to 15 per cent. in Cornwall, 9 per cent in Staffordshire, and 5 per cent. in South Wales.

Births.

During the quarter ending 30th June last 225,866 births were registered, equal to an annual rate of 37·4 per 1000 of the estimated population. This birth-rate exceeded that which prevailed in the corresponding quarter of any preceding year since civil registration commenced in 1837. The highest recorded birth-rate in the June quarter of any preceding year was 37·2 in 1854 and 1868. The birth-rate last quarter exceeded the average rate during the corresponding period of the ten preceding years 1866–75 by 1·3 per 1000. The birth-rate in the second quarter of those ten years ranged from 37·2 in 1868, to 34·1 in 1869. The sex proportion of the children born during last quarter was 103 males to 100 females.

The annual birth-rate in the three months ending June last exceeded by 1·4 per 1000 the rate in the corresponding period of 1875, and ranged from 31·0 and 31·3 in the principally agricultural population of the South-western and South-eastern, to 41·4 and 42·8 in the mining and manufacturing population of the North-western and Northern Registration Divisions. The lowest county birth-rates during the quarter were 29·1 and 29·6 per 1000 in Dorsetshire and the extra-metropolitan portion of Surrey, whereas the rate was 43·6 in Derbyshire, 44·7 in Staffordshire, and 46·3 in Durham. Compared with the birth-rates in the June quarter of 1875, those which prevailed last quarter showed an excess in each county except Cornwall and Durham.

In the twenty large English towns furnishing weekly returns the birth-rate in the quarter averaged 38·1 per 1000, and exceeded by 0·7 the average rate in the whole of England and Wales; in the corresponding quarters of 1874 and 1875 the birth-rate in eighteen of these towns was equal to 37·6 and 37·3, respectively. The rate last quarter in these 20 towns ranged from 30·1 and 31·9 in Brighton and Norwich, to 46·1 and 50·4 in Oldham and Salford. In fifty other large towns the birth-rate averaged 38·9 per 1000; it was but 25·0 and 27·2 in Cheltenham and Hastings, whereas it was so high as 47·0 in West Bromwich, 47·9 in Dudley, 48·7 in St. Helens, 49·2 in Swansea, and 49·4 in Wigan.

Movement of the Population.

The natural increase to the population of England and Wales, by excess of births over deaths registered during the three months ending 30th June, was 99,654; in the corresponding periods of 1874 and 1875 the excess of births over deaths did not exceed 93,691 and 83,853. In consequence of the exceptionally high birth-rate and of the deaths being below the average, the natural increase to the population during the second quarter of this year was unprecedentedly large.

ough no available records of Immigration exist, returns issued by the Board de afford valuable information relating to Emigration. From these returns ars that during the three months under notice 45,143 emigrants left the ports of the United Kingdom at which emigration officers are stationed; a considerably lower number than in any previous corresponding quarter 862. Excluding 10,661 who were foreigners, and distributing proportionally ose nationality was undistinguished, the emigrants of British origin during arter were 34,282, including 19,827 English, 3052 Scotch, and 11,403 Irish. oportions of emigrants to a million of the population were 818 from England, m Scotland, and 2143 from Ireland. Compared with the average proportion emigrants during the second quarters of the three years 1873–4–5, that prevailed last quarter showed a decline of 47 per cent. in England, 64 per Scotland, and 65 per cent. in Ireland. Of the 34,282 British emigrants the quarter ending June last, 58 per cent. left for the United States, 25 per r the Australian Colonies, 13 per cent. for British North America, and 4 per r all other places. The number of emigrants to the United States, which 0,097 in the June quarter of 1873 has since rapidly declined, and was but during the corresponding period of 1876.

Prices, Pauperism, and Meteorology.

average price of wheat during the quarter was 45*s.* 10*d.*, being an increase 2*d.* upon that which prevailed in the first quarter of the year; in the June of 1875, the average price was only 42*s.* 6*d.*, against 61*s.* 1*d.*, in the onding period of 1874. The mean price of the best potatoes in the averaged 147*s.* 6*d.* per ton, against 150*s.* and 100*s.* 6*d.* in the corresponding s of 1874 and 1875. The mean wholesale price of beef averaged $6\frac{5}{8}d.$, and ton $7\frac{4}{8}d.$ per lb. Beef was slightly cheaper and mutton slightly dearer than preceding quarter. The average price per ton of the best seaborne coal in ndon market, put in barge from the collier in the Thames, which had been ., 23*s.* 7*d.*, and 20*s.* 8*d.* in the second quarters of the three years 1873–4–5, declined to 18*s.* 8*d.* in the three months ending June last. The average consols was 95*l.* 10*s.*, and 1*l.* 7*s.* 6*d.* per cent. higher than in the preceding months; the price of consols had not previously been so high since the end of when it was 96*l.* 2*s.* 6*d.* The average minimum rate of discount charged by nk of England during the three months ending 30th June last was nearly showing a decline of almost 2*l.* from the average rate in the preceding . The rate of discount was lower last quarter than in any previous quarter eptember 1871.

ng the five years 1870–5 the proportion of pauperism steadily declined, the e being equal to 27 per cent.; the decrease was 10 per cent. among in-door, per cent. among out-door paupers. The average number of paupers re- on the last day of each week during last quarter was 669,807, of which 5 received in-door, and 535,431 out-door relief. The number of paupers was cent. less than in the corresponding quarter of 1875; the in-door paupers an increase of 2 per cent., whereas the out-door paupers had decreased 10 t. The proportion of out-door to in-door paupers was as four to one last ; in the corresponding period of 1875 it was as four and half to one.

remarks upon the meteorology of the quarter, at the Royal Observatory, vich, and the accompanying tables, furnished by Mr. James Glaisher, F.R.S., found on pp. 65–72. The warm weather which set in on 28th March ed until 9th April, the mean temperature of the first nine days of the being in excess by $5\frac{1}{2}°$. A severely cold period commenced on 10th April ted until 19th; during this period snow fell generally throughout the , and the heaviest snow storm of the whole winter occurred on 14th. The daily deficiency of temperature from 10th to 19th April was $4\frac{1}{2}°$. From 20th April the weather was moderately warm, but a long cold period set in on hich continued with few exceptions till 18th June. The weather was cold the greater part of May; the direction of the wind was principally E. and now fell occasionally up to 14th, and no rain fell between the end of April t May. The average daily deficiency of temperature during the fifty days 18th June was nearly $3\frac{1}{2}°$. From 19th to the end of June the temperature

was for the most part warm, and showed an average daily excess of $2\frac{1}{4}^{\circ}$. The mean temperature of the quarter was $51^{\circ}\cdot7$ and $1^{\circ}\cdot3$ below the average for the corresponding period in 105 years. In April the mean was $47^{\circ}\cdot2$ and $1^{\circ}\cdot1$ below the average; in May the mean was $49^{\circ}\cdot4$ and the deficiency $3^{\circ}\cdot1$; and in June $58^{\circ}\cdot5$, or in excess by $0^{\circ}\cdot3$. The mean temperature of the quarter at 42 stations of observation ranged from $47^{\circ}\cdot9$ at Calcethorpe (Lincolnshire), to $53^{\circ}\cdot3$ at Barnstaple.

The amount of rain measured during the quarter at Greenwich was only 3·5 inches, and was 2·3 inches below the average amount for the corresponding period in 61 years. The amounts measured in the three months were respectively 1·3 inches in April, and 1·1 inches both in May and June; these monthly amounts showed a deficiency of nearly half an inch in April, and of about an inch in May and in June. The average rain-fall at the various stations of observation between latitudes 50° and 55° was 5·6 inches, against 4·4 and 5·9 inches in the corresponding periods of 1874 and 1875. The average rain-fall last quarter was 4·4 inches between latitudes 50° and 51°, whereas between 54° and 55° it averaged 7·1. The measured rain-fall during the 13 weeks ending 1st July in those of the twenty large English towns furnishing returns, ranged from 3·5 in London and 4·6 both in Bristol and Liverpool, to 7·3 inches in Wolverhampton and Manchester.

State of the Public Health; Deaths.

During the second quarter of 1876 the deaths registered in England and Wales were 126,212, and equal to an annual rate of 20·9 per 1000 of the estimated population. This death-rate was 0·5 per 1000 lower than the average rate in the corresponding quarter of the ten years 1866–75, and was, with two exceptions, lower than the rate which prevailed in any of those years; in 1868 and 1873 the rate in the June quarter was but 20·2 and 20·4, whereas in 1866 it was so high as 24·2. The average death-rate in the second quarters of the 38 years of civil registration 1838–75 was 22·0 per 1000, and the rates in the several years ranged from 25·1 in 1847, to 20·2 in 1868.

The 126,212 deaths included 66,206 of males, and 60,006 of females; the male death-rate was equal to 22·5, and the female rate to 19·3 per 1000 persons living of each sex. In equal numbers living, the deaths of males in the quarter were as 116 to each hundred deaths of females, showing a considerable relative increase in the death-rate of males, compared with that which prevailed in the three preceding quarters. In 1857 and 1858 the proportion of the rates of mortality among males and females, was as 107 to 100, whereas the excess in the death-rate of males has since steadily increased, and in 1875 the proportion was as 113 to 100. This increase in the proportion of male to female mortality is rather due to a decline in the female than to an increase in the male death-rate. In the 15 years 1860–75, the female death-rate was 3·0 per cent. lower than in the preceding 15 years; the male death-rate in the second period of 15 years, showed an increase of 0·7 per cent. upon the rate in the preceding period. In Monmouthshire which contains a large proportion of mining population, in equal numbers living, 129 males died to every 100 females during last quarter.

In the eleven registration Divisions the annual death-rate among persons during the quarter ranged from 17·3 and 17·4 in the principally agricultural counties of the South-eastern and South-midland Divisions, to 22·6 and 25·2 in the York and North-western Divisions. The lowest county death-rates were 15·7 in the extra-Metropolitan portion of Surrey and 16·1 in Hertfordshire; the highest were 22·6 in Yorkshire and 25·8 in Lancashire. Among equal numbers of persons living, 165 persons died during the quarter in Lancashire, to each 100 that died in the extra-Metropolitan portion of Surrey. It should be noted that the death-rate in North Wales during last quarter was equal to 25·2 per 1000, and showed a further considerable increase upon that which prevailed in the three preceding quarters. The deaths in North Wales exceeded the average number in the three preceding corresponding quarters by 12 per cent., the excess being equal to 26 per cent. in Merionethshire and 29 per cent. in Anglesey. The Districts of Llanrwst and Festiniog showed a death-rate during the quarter equal to 32 and 29 per 1000, respectively; the rate being excessively high both among infants and persons aged upwards of 60 years.

death-rate in Lancashire, 25·8 per 1000, again showed a conspicuous excess
ne rate in other parts of England and Wales. In thirteen of the largest
in Lancashire the death-rate was equal to 27·3 per 1000, and in the remain-
rtion of the county it was 24·2 per 1000. What may be called the rural
Lancashire, that is 24·2 per 1000, was higher than the rate in any English
except Lancashire.

he principal urban population of England and Wales the death-rate in the
was equal to 22·1 per 1000, and was 0·7 below the average rate in the
opulation in the ten preceding corresponding quarters. In the remaining or
opulation the death-rate was 19·2, and 0·3 below the average. Among an
number of persons living, 115 died during the quarter in the urban popu-
to each 100 in the rural population ; the average proportion of deaths
and country during the second quarters of the ten years 1866–75 was as
100. In recent years sanitary progress has been far more marked in urban
rural sanitary districts.

wenty of the largest English towns, including London, having an estimated
ion little short of seven millions of persons, the death-rate in the quarter
ed 22·6 per 1000, and only exceeded the general urban rate by 0·5
po. The rates in these twenty towns ranged from 18·8 and 18·9 in
er and Sunderland, to 29·1 in Manchester and Oldham, and 30·4 in Sal-
The zymotic death-rate was excessive in each of these three last mentioned
In fifty other large English and Welsh towns, having a population of
wo millions and three quarters, the death-rate in the three months averaged
nd was 1·5 below the rate in the twenty largest towns, and was 1·0 below
hich prevailed in the fifty towns in the corresponding quarter of last year.
e fifty towns the lowest death-rates were 15·0 in Middlesborough and Yar-
15·2 in Maidstone, and 16·0 both in Barrow-in-Furness and Reading.
es exceeding 28 per 1000, were 28·2 in Rochdale, 28·3 in Stockport, 28·9
ton-under-Lyne, and 36·4 in Macclesfield. The mortality from zymotic
s was excessively high in Rochdale, Devonport, and Macclesfield.

126,212 deaths included 28,679 of infants under one year of age, equal to
1000 of the births registered, showing a decline of 6 per 1000 from the
proportion in the six preceding corresponding quarters. Infant mortality,
ed in this manner, ranged in the eleven registration Divisions from 103 in
ncipally agricultural South-eastern counties, to 144 in the North-western
s of Lancashire and Cheshire. The proportion of deaths under one year to
registered was but 98 per 1000 in the extra-metropolitan portion of Middlesex
Hertfordshire, whereas in the other counties it ranged upwards to 138 in
land, 146 in the West Riding of Yorkshire, and 147 in Lancashire. With
ce to the excessive rate of mortality in North Wales, which has before been
ed, it may be noted that the proportion of infant mortality during last
was equal to 192 and 194 per 1000 births registered in Llanrwst and
g Districts, which exceeded the average proportion in the densest urban
ions, and was nearly as high as in Liverpool. In twenty of the largest
towns this proportion of infant mortality averaged 140 per 1000, and
from 109 in Hull and 115 in Portsmouth and Nottingham, to 165 in
th and 195 in Liverpool. The following excessive rates of infant mortality
large towns are also deserving of notice and investigation; the proportion
s under one year to births was equal to 197 in Ashton-under-Lyne, 198 in
rn, 209 in Preston, and 231 in Macclesfield. The fatal prevalence of measles
ted to the high rate of infant mortality in Plymouth and Macclesfield.

annual rate of mortality in the quarter among children and adults, aged
one and 60 years, was equal to 12·2 per 1000 persons living at these ages,
s 0·5 below the rate in the same period of 1875 ; in twenty of the largest
averaged 14·2, and ranged from 10·2 and 10·6 in Leicester and Norwich,
in Oldham, 20·0 in Manchester, and 20·3 in Salford. Among persons
wards of 60 years, the rate of mortality in the quarter averaged 69·7 per
gainst 67·8, and 74·2 in the corresponding periods of 1874 and 1875. In
nty large towns the annual death-rate among persons at these ages averaged
r 1000, and ranged from 53·9 and 61·1 in Leicester and Sunderland, to
d 115·1 in Wolverhampton and Liverpool. The range between the death-

rates among elderly persons in Leicester and Liverpool, which was even wider than usual during the quarter now under notice, appears to demand investigation. In equal numbers living, 195 persons aged upwards of 60 years died in Liverpool during the year 1875, to each 100 of the same ages in Leicester; and yet infant mortality was higher in Leicester than in Liverpool, and the proportion of deaths at all ages in Liverpool did not exceed 103 to 100 in Leicester.

Of the 126,212 deaths from all causes in the quarter, 3245 were referred to measles, 3233 to scarlet fever, 2938 to whooping-cough, 2338 to fever, 1898 to diarrhœa, 627 to diphtheria, and 501 to small-pox; in all, 14,780 deaths resulted from these seven principal zymotic diseases, and were equal to an annual rate of 2·4 per 1000, which was 0·6 below the average zymotic rate in the corresponding quarters of the six years 1870–5. In the eleven Registration Divisions the zymotic death-rates during the three months ending June last ranged from 1·4 and 1·6 per 1000 in the Eastern and South-midland, to 2·9 in London and 4·0 in the North-western. Whereas the zymotic death-rate did not exceed 1·1 per 1000 in Cambridgeshire, and 1·3 in Norfolk and Suffolk, it was so high as 4·2 in Lancashire. In the twenty large towns the annual death-rate from these seven diseases averaged 3·3 per 1000 (0·9 lower than the rate in Lancashire), and corresponded with the rate in the same period of 1875; in the several towns it was but 1·2 and 1·3 in Norwich and Newcastle-upon-Tyne, whereas it was 5·4 in Liverpool, 5·5 in Plymouth, 6·3 in Portsmouth, and 6·9 in Salford. The high zymotic death-rate last quarter was due to measles, whooping-cough, small-pox, and fever in Liverpool; to measles in Plymouth, scarlet fever in Portsmouth, and small-pox in Salford. In fifty other large towns the zymotic rate averaged 2·6 per 1000, which slightly exceeded the rate in the second quarter of last year; it was less than one per 1000 in Cambridge, Reading, York, and Colchester, but ranged upwards in the other towns to 5·4 in Shrewsbury, 6·8 in Rochdale, 7·7 in St. Helens, 8·8 in Devonport, and 10·5 in Macclesfield. The high zymotic rate in all these five last-mentioned towns, was principally due to the fatal prevalence of measles.

The most fatal zymotic disease in England and Wales during the three months ending 30th June last was *measles*, which caused, as before-mentioned, 3245 deaths. The annual rate of mortality from this disease, which was but 0·19 per 1000 in the September quarter of 1875, rose steadily in each succeeding quarter to 0·54 in the three months ending June last, a higher rate than in any quarter since the second of 1874. The disease was especially fatal last quarter in Lancashire and Devonshire, where it caused death-rates equal to 1·1 and 1·5 per 1000, respectively. No death from measles occurred either in Bedfordshire or Westmorland. Measles, as well as the other infectious zymotic diseases, is most fatal in urban populations. In the 20 large English towns the death-rate from measles averaged 0·8 per 1000, and was equal to 2·0 in Liverpool and 4·4 in Plymouth; it was also equal to 4·4 in Shrewsbury, 4·6 in Rochdale, 5·4 in St. Helens, 6·3 in Devonport, and 7·5 in Macclesfield. Still higher death-rates from measles occurred during the quarter in Harrow, Cheriton-Fitzpaine (Devon), Melton Mowbray, and in the townships of Cleckheaton and North Bierley, near to Bradford. In many places the disease appears to have assumed an unusually fatal type. The average age at death of all males and females who died from measles in England and Wales, in the 25 years 1848–72, was 2·7 years; and in the year 1874 of 12,255 deaths from measles no less than 77 per cent. were of children under three years of age.

The fatality of *scarlet fever*, which was unusually severe during 1874 and 1875, continues to decline. The 3233 deaths referred to this disease in the second quarter of 1876 were fewer than in any previous quarter since the three months ending 30th September 1873. The annual death-rate from scarlet fever in England and Wales averaged 1·04 and 0·84 per 1000 during 1874 and 1875, and declined to 0·70, and 0·53, respectively, in the first two quarters of 1876. The lowest death-rate from this disease in any quarter since the beginning of 1870 was 0·36 in the second of 1873. During the three months ending June last the annual death-rate from scarlet fever was but 0·21 and 0·29 in the principally agricultural population of the Eastern and South-midland Registration Divisions, whereas it was 0·66 in the Yorkshire, 0·67 in the North-western, and 0·75 in the North-midland Divisions. No fatal case of scarlet fever occurred during the quarter in the counties of Oxford, Huntingdon, or Westmorland, whereas the death-rate from the disease was equal to

n Cornwall, 0·95 in Nottinghamshire, 1·26 in Leicestershire, and 1·59 per n Hampshire. In the 20 largest English towns the average scarlet fever rate 66; in Portsmouth it was so high as 3·4, and it exceeded one per 1000 in d, Leicester, and Bristol. Cardiff, Southampton, and Chester may be men- as other large towns in which scarlet fever was severely epidemic during the now under notice. In Cardiff the disease continued fatally prevalent; ths in the sub-district resulted therefrom, raising the number of fatal cases eptember last to 225. Among the other localities in which scarlet fever was lly fatal during the quarter may be mentioned Alverstoke, Brixham, Redruth, ater, Chard, Hereford, Whitwick, Basford, Pontefract, Lofthouse, and ton-le-Spring. With reference to the fatal prevalence of scarlet fever in Red- which caused 90 deaths within the Local Board District, during the fifteen s ending June last, it is stated that the disease had shown exceptional in the rural part of the District known as Treleigh, where four out of every ses proved fatal. At Treleigh the residents are dependent for their drinking upon a stream which is little better than an open sewer, to which is attributed eptionally malignant type the disease has there assumed, in some cases carrying he children of a family.

2938 deaths referred to *whooping-cough* in the quarter were equal to nual rate of 0·49 per 1000, slightly below the average rate in the six ng corresponding quarters. The rate exceeded one per 1000 in London, ool, Salford, Preston, and Chatham. Whooping-cough was exceptionally Bognor, High Wycombe, Newcastle-under-Lyme, and Blackwell.

decline in the deaths referred to *fever*, including typhus, enteric and typhoid, distinguished forms of fever, is again one of the most noticeable features of motic fatality in England and Wales. The annual death-rate from fever ed 0·93 per 1000 during the five years 1865–9, declined to 0·64 in the ling five years 1870–74, and was but 0·52 in 1875, which was lower than er-rate in England since 1837, when the commencement of civil registration hs and their causes first afforded the means of such information. In the o quarters of 1876 the death-rate from fever further declined to 0·45 and per 1000. The rate of 0·39 last quarter was 25 per cent. lower than the e rate in the corresponding period of the six preceding years 1870–75. In incipal urban populations of England and Wales, consisting of about 14 s, the fever-rate last quarter averaged 0·43, and in the remaining rural tion of 10 millions 0·33 per 1000. In the principally agricultural counties South-eastern and South-midland Divisions the fever-rate was 0·23 and and was only 0·10 in Berkshire, and 0·13 in Oxfordshire and the extra- olitan portion of Middlesex; it was, however, 0·56 in Durham, 0·56 in Wales, and 0·66 in Lancashire. In the twenty large English towns the ate in the quarter averaged 0·40; no fatal case of fever was registered ester, and the rate in Brighton and Birmingham was but 0·12 and 0·27, s the rates in the other towns ranged upwards to 0·65 in Manchester, n Portsmouth, 0·70 in Liverpool, and 1·18 in Oldham. An excessive fever- as also shown in other large towns; it was 0·72 in Worcester, 0·75 in ort, 0·97 in St. Helens, 1·01 in Huddersfield, and 1·02 in Bury. The ate was equal to 0·66 in thirteen of the largest towns of Lancashire, ing a population estimated at about 1,641.776 persons; in the re- r of the county, including all the small towns and rural districts, with lation estimated at 1,430,913 persons, the fever-rate was also equal to 0·66, onding with the rate in the thirteen largest towns. The infinite multiplication an sanitary districts and authorities, by the creation of small local board s does not appear to be conducive to efficient sanitary organisation; the from fever, which is declining rapidly in our large towns, is still conspicuous newly aggregated urban communities lying outside the large towns in the acturing or mining districts of Lancashire, Yorkshire, Durham, and Wales. turns of the local registrars show a high death-rate from fever in many es, among which may be mentioned:—Leighton Buzzard, Kilmersdon rset), Ross, Kidderminster, Rugby, Tideswell (Derby), Bentham, Todmorden, ester and Tanfield, Durham, Bedlington, and Neath.

The 1898 deaths from *diarrhœa* showed a considerable decline from the average mortality in the six preceding corresponding quarters ; this may be attributed to the low temperature which prevailed during the greater part of May and June.

The fatality of *diphtheria* usually bears a proportional relation to that of scarlet fever. The 627 deaths referred to this disease showed a decline from the number in the corresponding quarter either of 1874 or 1875. The death-rate from this disease was excessive in the West-midland and Welsh Registration Divisions, and local outbreaks may be noted at Chertsey, Abingdon, Long Buckby, Ludlow, West Felton (Oswestry), Forton (Salop), Brailes (Warwickshire), and Gainsborough.

The fatal cases of *small-pox*, which had been but 149 in the last three months of 1875, rose to 262 in the first quarter of 1876, and further increased to 501 in the three months ending June last. No death from small-pox occurred during the quarter in the Eastern counties, only one in the five counties of the North-midland Division, and but 2 in the South-western and 2 in the Northern Divisions. No less than 391 of the 501 in England and Wales occurred in Lancashire, which were equal to an annual rate of 0·51 per 1000, whereas the rate from this disease in the rest of England and Wales was but 0·02 per 1000. The excessive fatality of small-pox in Lancashire may be referred to neglect or inefficiency of vaccination, probably in some instances combined with unsatisfactory sanitary condition. Some members of the medical profession, unfortunately, do not state, in filling up certificates of the causes of deaths from small-pox, whether the deceased had or had not been vaccinated. Hence the death-register does not afford the means of satisfactorily estimating the proportion of deaths from small-pox which may be attributed to neglect or inefficiency of vaccination. Of 372 cases of small-pox registered last quarter, 18 per cent. were described as vaccinated, 24 per cent. as unvaccinated; whereas in 58 per cent. of the cases there was no reference to vaccination. The co-operation of the medical profession in this matter is as indispensable as it is desirable. Of the 110 deaths from small-pox registered last quarter out of Lancashire, 26 occurred in London, 4 at Northfleet, 13 in Bristol and Clifton, 9 at Bulkington, 6 at Macclesfield, 5 near Wakefield, and 5 at Llanberis. Many of the fatal cases of small-pox in different parts of England and Wales were directly traced to infection from Manchester and Salford, or Liverpool, which have recently been the two principal centres of infection in England.

In workhouse establishments, hospitals, and public lunatic asylums, 11,650, or 9·2 per cent. of the deaths in the quarter were registered ; the per-centage corresponded with that in the second quarter of 1875. In twenty of the largest English towns 5,824 deaths in institutions were recorded, or 14·9 per cent. of the total deaths, whereas the proportion in the rest of England was only 6·7 per cent. The proportion of institution deaths in the twenty large towns ranged from 5·8 per cent. in Oldham and 6·7 in Sunderland, to 17·9 in Manchester and Wolverhampton, and 18·3 in London.

To different forms of violence 4217 deaths were referred in England and Wales, equal to an annual rate of 0·70 per 1000 persons estimated to be living, and lower by ·04 than the rate in the corresponding quarter of 1875. In the Eastern Registration Division the death-rate from violence was only 0·49, while it was 0·86 and 0·89 in the North-western and Northern Divisions respectively. In the twenty large English towns the death-rate from violence averaged 0·82 per 1000, and ranged from 0·29 and 0·45 in Norwich and Sheffield, to 1·05, 1·23, and 1·26 respectively in Wolverhampton, Newcastle-upon-Tyne, and Liverpool.

During the three months 6392, or 5·1 per cent., of the deaths were registered from the certificates of coroners. The proportion of inquest cases to total deaths corresponded with the average proportion in the six preceding spring quarters. In the twenty large towns the per-centage averaged 6·2, and ranged from 2·8 in Sheffield to 7·8 in Manchester.

Watering Places and Health Resorts.

The estimated population of 46 of the principal English and Welsh seaside and inland watering places in the middle of 1876 slightly exceeds a million of persons. The annual death-rate among this population averaged 18·1 per 1000, against 18·0

8·4 in the two preceding corresponding quarters. This rate was 1·1 per
ower than the average rate during the quarter in the small towns and country
s which constitute what are called the rural districts. The registration Dis-
ind sub-districts taken to represent these watering places contain an estimated
tion ranging from 4199 and 4210 in Bognor and Lyme Regis, to 54,551 and
8 in Bath and in Brighton with Hove. The lowest death-rates in these 46
ng places during the three months ending June last were :—Deal and Walmer
Malvern 11·5, Lowestoft 12·4, Margate 13·3, and Weston-super-Mare 13·5.
eath-rates exceeding 23 per 1000 were :—Bangor 23·5, Ilfracombe 23·5,
gate 23·6, Blackpool and Fleetwood 24·1, Tenby 24·2, Rhyl 25·0, and
32·5.

death-rate from the seven principal zymotic diseases averaged 1·6 per 1000
se 46 watering places. No death from any of these seven diseases was
red during the quarter in Deal and Walmer, Littlehampton, or Lyme Regis ;
ns these diseases caused an annual rate of 3·0 per 1000 in Harrogate, 3·1 in
, 3·2 in Tenby, 3·5 in Southport, 4·1 in Ramsgate, 5·8 in Dartmouth,
6 in Bognor. The high zymotic death-rate in Ramsgate was principally
measles, scarlet fever and whooping cough ; in Bognor to whooping-
; in Dartmouth to measles ; in Tenby to scarlet fever and fever ; in South-
small-pox ; in Clifton to scarlet fever ; and in Harrogate to measles. The
mportance of health reputation to watering places, and the special risks to
they are exposed by the importation of cases of infectious diseases, invests
itary organisation of these resorts with special importance. The neglect to
e hospital accommodation for the isolation of non-pauper cases of infectious
in so many of our most popular watering places can only be regretted as
ce of a shortsighted sanitary policy, which is a constant source of danger
r own interests, as well as to the health of their clients. Watering places, in
atter of sewage, water supply, and other essentials of sanitary organisation,
endeavour to make themselves models for other urban sanitary districts.
in many instances, can scarcely yet be said to be the case, although the
e sanitary condition of English watering places, judged by their mortality
cs during the three months ending June, may be pronounced to be
tory.

Health of Foreign Cities.

ummary of the weekly returns with which the Registrar General is favoured
ious local authorities abroad shows that the average annual death-rate during
ond quarter of 1876, in twenty-four Indian and Foreign cities, was 28·2 per
against 22·6 in twenty of the largest English towns. The population of
wenty-four Foreign cities is estimated at nearly eleven millions of persons.
west death-rates in these cities were 21·1 and 21·2 in Brooklyn and Boston ;
s the rate was equal to 38·1 in Munich, 38·3 in Alexandria, 38·5 in
n, and 45·9 in Buda-Pesth. Small-pox caused, in the thirteen weeks taken
esent the quarter, 1138 deaths in Bombay. Diphtheria was fatally prevalent
lin ; small-pox in Vienna ; measles in Breslau, Buda-Pesth, and Turin ; and
ne 314 deaths were returned from "eruptive fevers," against 440 in the first
of the year. The indefinite heading "eruptive fevers" in the Roman returns
to exaggerated reports of the fatality of "fever" in that city, whereas the
referred to this heading were principally the result of small-pox and measles
have there been epidemic since last autumn.

PRELIMINARY TABLES.

TABLE I.—**Marriages, Births,** and **Deaths** registered in **England** and **Wales** in the Years **1866–76,** and in each Quarter of those Years.

YEARS –	1866	1867	1868	1869	1870	1871	1872	1873	1874	1875	1876

588	Swansea - - - M -	72,359	887	388	49·2	21·5	1·1	Swansea and Llangafelach. and Llansamlet (Neath) Sub-dists.

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the last column approximately represent, are Municipal or Parliamentary.

* For method of framing these estimates see note * to Table VI. As the population of Devonport, Coventry, Macclesfield, and Ashton-under-Lyne declined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the present population of Dudley and Wigan have been based upon local information as to the increase of the inhabited houses in these two boroughs between 1871 and 1875.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the towns, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where the Workhouse is situate outside that area.

Mortality in **Districts** or **Sub-districts** containing the principal **English Watering Places** during the **Second** or **Spring Quarter** of 1876.

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase since 1871 has been the same as that which prevailed between 1861 and 1871. In calculating the rates of mortality for this Table a proportion of the deaths recorded in the two Middlesex County Lunatic Asylums, situated in the Districts of Uxbridge and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts in the Outer Ring.

TABLE XII.—**Births** and **Deaths** in the **Second Quarter** of 1876 in **24 Foreign Cities.**

TOWNS.	POPULATION (enumerated or estimated).	BIRTHS.	DEATHS.	ANNUAL RATE per 1000 Persons living.		DEATHS FROM EPIDEMIC DISEASES.

* The *Registration* or *Union Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ more or less from the boundaries of Counties (proper).

† The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties. ‡ See page 14, note †.

NOTE.—*The Registrars alone must be considered responsible for the opinions expressed in the foot notes respecting the prevalence of epidemic diseases, also as to the statements respecting sanitary arrangements, &c. &c.*

Counties, and Superintendent Registrars' Districts of England.

* The *Superintendent Registrars' Districts* are collections of contiguous Parishes or Places, nearly always identical with the Poor Law Unions of the same names; they are 631 in number, and are here arranged topographically under the Registration Counties.

† These figures have been furnished to the Registrar-General by the Ordnance Survey Department. They do not include space occupied by foreshore or tidal water of rivers and creeks.

‡ See page 14, note †.

UTH EASTERN COUNTIES.—Superintendent Registrars' Districts—*continued.*

ntendent rs' Districts.	Area in Statute Acres.	Enumerated Population, 1871.	Marriages	Births	Deaths		The Deaths in the Quarter are stated by the Registrars to include											
							Deaths of		Deaths from									
			Registered in Quarter ending 31 Mar. 1876.	Registered in Quarter ending 30 June 1876.	*Average in Quarters ending 30 June in the 3 Years* 1873-75.	Registered in Quarter ending 30 June 1876.	Infants under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhœa.	Cholera.	Violence.	Inquest Cases.	Deaths in Public Institutions.

* The *Sub-districts* (2192 in number) are sub-divisions of *Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

† For London the numbers of Births and Deaths, as well as the details given, "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks, viz., from 2nd April to 1st July 1876.

‡ The Berwick Street Sub-district (4 : 2) includes that division of the parish of St. James Westminster which, prior to the 1st April, 1876, formed the St. James's Square Sub-district.

* 77 : 1.—Two of the deaths from fever occurred in Hove, and one each in the parishes of Southwick and Portslade.
† 82 : 3.—Of the 9 deaths from whooping-cough, 5 were registered in April, 2 in May, and 2 in June.
‡ 86 : 1.—Measles and scarlet fever have been prevalent in nearly every house in Havant and Emsworth, but their prevalence was declining at the end of the quarter.
§ 90 : 3.—The death of a child, aged 5 years, in Sandown, on 26th of May, was referred to choleraic diarrhœa.

* 547 : 1.—Of the 4 deaths from fever, 3 were enteric and 1 typhus.
† 548 : 1.—The 21 deaths from scarlet fever included 11 in Newbottle township ; 5 were registered in April, and 8 both in May and in June.
‡ 549 : 1.—Of the 21 deaths from scarlet fever, 12 were registered in April, 5 in May, and 4 in June.
§ 553 : 3.—The resident population of this sub-district is said to be still rapidly decreasing in consequence of the demolition of tenement property for the erection of business premises.
‖ 553 : 4.—Many houses in this sub-district have been demolished in order to make improvements on the Quay side.

* 620 : 1.—The 3 deaths from fever included 2 from typhoid fever in Bala town.
† 623 : 3.—The 3 deaths from scarlet fever occurred in the parish of Meylltyrn, and the two of fever in that of Bryncroes.
‡ 624 : 1.—Of the 4 deaths from fever, 3 were certified as typhoid, and one as typhus.
§ 624 : 2.—Five of the 6 deaths from small-pox occurred at Coed-y-Ddol, Llanberis, the date of the last death being 3rd June; all were "not stated" as to vaccination, although the Registrar states that 5 of the 6 were unvaccinated cases.
‖ 625 : 2.—The fatal case of small-pox was said to have been imported from London.
¶ See page 13, note *.

MARKS ON THE WEATHER DURING THE QUARTER ENDING JUNE 30TH, 1876.

By JAMES GLAISHER, ESQ., F.R.S., *&c.*

April 9th, the weather was warm, and the average daily excess of the mean temperatures 9 days above their averages was $5\frac{1}{2}°$. On the 10th of April, a very severe cold period and snow fell generally over the country north of latitude 51°; on the 11th, it fell more ly and extended to stations on the south coast; on the 12th, it fell still more generally, re were falls of snow in Cornwall and Devonshire, and at Guernsey. In all the Northern s it fell in great quantities, in Scotland telegraphic communications were interrupted, and east coast, there was a very severe storm and gale of wind. At Leicester snow fell very and in the midst of the snowstorm there were both thunder and lightning. London was by a succession of snowstorms, and in the afternoon there were vivid flashes of lightning d thunder. On the 13th, the weather was very severe, there was a bitterly cold wind, anied by constant storms of sleet and hail, and this unusually severe weather was expe- in all directions, a great quantity of snow fell; and all traffic between London and the was greatly delayed, in some places the depth of the snow was from 16 inches to 24 inches. he 14th of April, the severest snowstorm of the whole winter was experienced. A great of telegraphic posts were thrown down, and telegraphic communication was stopped in many s, traffic generally was impeded and in some places stopped altogether; some snow drifts great depths, and snow fell everywhere. Garden trees and shrubs were broken down by ght of the accumulated snow. On the 11th day the deficiency of mean temperature was the 12th was $11\frac{1}{4}°$; on the 13th was 12°; and on the 14th was 9°. The highest and temperatures during these days are shown in the following Table :—

LE of MAXIMUM and MINIMUM TEMPERATURES of the AIR, on the 11th, 12th, 13th, and 14th of APRIL 1876.

From this Table it will be seen that during the days the temperature at most places exceeded 40°, and at night was generally below 32°. On the 11th it was 25° at Stonyhurst, on the 12th it was 25°·2 at Calcethorpe, on the 13th it was 19° at Allenheads, and on the 14th it was 23° at Allenheads.

The severe cold period somewhat moderated on the 15th, but it continued till the 19th, and the average daily deficiency from April 10th to April 19th was 4½°; on April 20th, a moderately warm period set in and continued for 10 days to the 29th, the average daily excess of temperature for these 10 days being a little less than 2°. On April 30th, a long cold period began, which continued with very few exceptions till the 18th of June; during the greater part of May there was a cold E. and N.E. wind, and no rain fell for 20 days; snow fell at different places on May 1st and 2nd, and as late as May 14th at Allenheads. The average daily deficiency of mean temperature for the 50 days ending June 18th, was 3½° nearly; and from the 19th of June to the end of the quarter the weather was generally warm, the average daily excess of mean temperature being 2¼°.

The readings of the barometer at 160 feet above the level of the sea, in the neighbourhood of London, were above their respective averages from the 2nd to the 8th of April, that for the 1st was 0·19 in. below; they were below their averages from the 9th to the 14th; above on the 15th and 16th; below from the 17th to the 22nd; a little above on the four following days; and again below from the 27th to the end of the month. The mean reading for the month was 29·680 ins., being 0·091 in. below its average. During the first 21 days of May, the readings of the barometer were all above their average values (the greatest departure in excess in this period was 0·53 inch on the 4th). From the 22nd to the 27th of May the readings were below their averages; and from the 28th to the end of the month they were above. The mean reading for the month was 29·956 ins., being 0·173 in. above its average. From the 1st to the 9th of June, the readings of the barometer were alternately above and below their respective averages, but only to small amounts; from the 10th to the 14th, they were above their averages; then below on the three following days, and constantly above and below for short intervals to the end of the month. The mean reading for the month was 29·816 ins., being 0·003 in. above the average.

At Greenwich *the mean temperature* for April was 6°·1 higher than that of March; that of May was 2°·2 higher than that of April; and that of June was 9°·1 higher than that of May. (From the preceding 35 years' observations the mean temperature of April above that of March is 5°·5; that of May above that of April is 5°·6; and that of June above that of May is 6°·1.)

The mean temperature of the air for April above that of March; South of latitude 51° was 4°·1; and North of 51° was 6°·0; that of May above that of April was 2°·3, South of 53½°; and 3·9 North of 53½°. That of June above that of May was 7°·2 South of 51°; between latitudes 51 to 52° was 9°·5; and North of 52° was 7·5.

The mean temperature of the air for April was 47°·2, being 1°·1 below the average of the preceding 105 years, and the same as the average of the preceding 35 years; it was 2°·8 below that of 1874, and 0°·9 below that of 1875.

The mean temperature of the air for May was 49°·4, being 3°·4 and 3°·1 below the averages of the preceding 35 years and 105 years respectively; it was 1°·1 and 5°·6 below the corresponding values in 1874 and 1875.

The mean temperature of the air for June was 58°·5, being 0°·4 below the average of the preceding 35 years, and 0°·3 above the average of the preceding 105 years; it was 0°·5 above that of 1874, and 0°·4 below that of 1875.

The mean temperature of the air for the quarter was 51°·7, being 1°·3 below the averages of the preceding 35 years, and 105 years.

The mean high day temperatures of the air were 0°·2 and 2°·9 below their respective averages in April and May; and 0°·1 above in June.

The mean low night temperatures of the air were 4°·8 and 1°·2 below their respective averages in May and June; and 0°·4 above in April.

Therefore the days and nights in April differed but little from their average value; in May both were cold; and in June the nights were cold.

The mean daily ranges of temperature were 1°·9 and 1°·3 greater than their respective averages in May and June; and 0°·5 less in April.

At Greenwich the increase of atmospheric pressure from March to April was 0·289 in., the increase from April to May was 0·276 in., and the decrease from May to June was 0·140 in. Over the whole country the mean increase from March to April was as follows:—Between latitude 50° and 51° was 0·250 in.; between 51° and 53¾° was 0·301 in.; and north of 53¾° was 0·367 in. The mean increase from April to May was as follows:—Between latitudes 50° and 53½° was 0·290 in.; and north of 53½° was 0·346 in. And the mean decrease from May to June, between latitudes 50° and 52½° was 0·142 in.; and north of 52½° was 0·203 in.

At Greenwich the fall of rain in April was 1·3 in., being 0·4in. below its average; in May was 1·1 in., being 1·0 in. below its average; and in June was 1·1 in., being 0·9 in. below its average. The total fall in the quarter was 3·5 in., being 2·3 in. below the average. The number of days on which rain fell in the quarter was 24.

Thunderstorms occurred, on 7 days in April; 2 days in May; and on 6 days in June.
Thunder was heard, on 8 days in April; 4 days in May; and on 9 days in June.
Lightning was seen, but thunder was not heard, on 6 days in April; and on 5 days in June.
Solar halos were seen on 9 days in April; 8 days in May; and on 13 days in June.
Lunar halos were seen on 5 nights in April; 3 nights in May; and on 1 night in June.
Auroræ boreales were seen on 4 days in April; and on 2 days in June.
Hail fell on 10 days in April; 5 days in May; and on 3 days in June. *Fog* on 28 days.

The average duration of the different directions of the wind referred to eight points of the compass, and the duration of each direction in each month in the quarter, were as follows:—

April.			May.			June.		
Average.	1876.	Departure from Average.	Average.	1876.	Departure from Average.	Average.	1876.	Departure from Average.
d.	d.	d.	d.	d.	d.	d.	d.	d.
2¼	3	+ ¾	1¼	2	+ ¾	2	4	+2
4	2	−2	4¼	5	+ ¾	3¼	5	+1¾
6	3	−3	7	8	+1	3½	5	+1½
3½	3	− ½	2½	7	+4½	2¼	2	− ¼
2	1	−1	1¾	2	+ ¼	1¾	2	+ ¼
2½	7	+4½	2¾	0	−2¾	2¼	3	+ ¾
6¼	7	+ ¾	7½	3	−4½	10	6	−4
2½	4	+1½	2	4	+2	3½	3	− ½
1	0	−1	2	0	−2	1½	0	−1½

gn + denotes excesses over averages; in the month of April the largest numbers with ire opposite to S., in May are E. and its compounds, and in June are N. and its compounds.
gn − denotes defects below averages; in April the largest numbers with this sign are o N. and N.E.; in May are S. and S.W.; and in June S.W.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING JUNE 30TH, 1876.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the fifth edition of his Hygrometrical Tables.

Names of Stations and Observers.	Height of Station above Sea Level.	Year 1876. Months.	Pressure of Atmosphere in Month. Mean.	Pressure of Atmosphere in Month. Range.	Temperature of Air in Month. Highest.	Temperature of Air in Month. Lowest.	Temperature of Air in Month. Range.	Temperature of Air in Month. Mean of all Highest.	Temperature of Air in Month. Mean of all Lowest.	Temperature of Air in Month. Mean Daily Range.	Mean Temperature. Air.	Mean Temperature. Dew Point.	Vapour. Elastic Force.	Vapour. In a cubic foot of Air. Mean.	Vapour. In a cubic foot of Air. Short of Saturation.	Mean Degree of Humidity. Satn. = 100.	Mean Weight of a cubic foot of Air.	Mean Reading of Thermometer. Maximum in Rays of Sun.	Mean Reading of Thermometer. Minimum on Grass.	Wind. Estimated Strength.	Wind. Relative Proportion of N.	Wind. Relative Proportion of E.	Wind. Relative Proportion of S.	Wind. Relative Proportion of W.	Mean Amount of Ozone.	Mean Amount of Cloud.	Rain. Number of Days it fell.	Rain. Amount collected.

The highest temperatures of the air were at Weybridge Heath, 88½°; and at Streatley Vicarage, 86°·9.
The lowest temperatures of the air were at Allenheads, 19°·0; and at Milltown, 21°·0.
The greatest daily ranges of the temperatures of the air were at Salisbury, 24°·7; Beckenham, 23°·9; and at Lampeter, 23°·0.
The least daily ranges of the temperatures of the air were at Guernsey, 10°·4; and at Ramsgate, 11°·7.
The greatest numbers of rainy days were at Bywell, 49; Allenheads, 46; and at North Shields, 43.
The least numbers of rainy days were at Chiswick, 21; and at Helston, East Tilbury, and Lampeter, all 26.
The heaviest falls of rain were at Allenheads, 9·92 inches; Wisbech, 8·75 inches; and at Bywell, 7·88 inches.
The least falls of rain were at Osborne, 2·87 inches; East Tilbury, 3·34 inches; and at Guernsey, 3·52 inches.

Quarterly Meteorological Table for different Parallels of Latitude.

PARALLELS OF LATITUDE, &c.	Mean Pressure of dry Air reduced to the level of the Sea.	Mean of all Highest Readings of the Thermometer.	Mean of all Lowest Readings of the Thermometer.	Mean Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	Wind. Mean Estimated Strength.	Wind. Relative Proportion of N.	E.	S.	W.	Mean Amount of Ozone.	Mean Amount of Cloud.	Rain. Mean Number of Days on which it fell.	Mean Amount of Rain.

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 111.] **Marriages**—*April, May, June*, 1876.
Births and **Deaths**—*July, August, September*, 1876. [Price 9*d.*

General Register Office, Somerset House,
1st November 1876.

In the UNITED KINGDOM the *births* of 280,083 children, and the *deaths* of 154,858 persons of both sexes, were registered in the three months ending 30th September 1876. The recorded natural increase of population was thus 125,225.

The registered number of persons married in the quarter ending 30th June 1876 was 125,004.

The resident population of the United Kingdom in the middle of 1876 is estimated at 33,093,439; that of England and Wales at 24,244,010, of Scotland at 3,527.811, and of Ireland at 5,321,618. The birth-rate in the United Kingdom in the *third* quarter of 1876 was 33·6 per 1000, and the death-rate 18·6. The marriage-rate in the *second* quarter of 1876 was 15·2 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered by 2192 Registrars in all the districts of England during the quarter ending 30th September and the MARRIAGES in 13,711 churches or chapels, in 7711 registered places of worship unconnected with the Established Church, and in 631 Superintendent Registrars' Offices, in the three months ending 30th June 1876.

The marriages show a recovery from the depression of the preceding spring quarter: and the marriage-rate of the three months that ended in June last approached the average for the season. The births registered in the quarter that ended on September 30th exceeded the average; but this may be partly due to a more complete registration. It is now the duty of parents to give Registrars notice of the births of their children, and neglect subjects them to penalties. The mortality in the warm but variable summer quarter was below the average; and the reduction in the rate was most striking in the large town districts. Diarrhœa is still a prevailing disease, and demands all the attention of health officers: nearly 15,000 deaths were ascribed to this single disease. The mortality from small-pox was almost confined to London and Lancashire.

Marriages.

During the second quarter of this year, ending 30th June, 102,436 persons were married in England and Wales, exceeding by 5716 the number in the corresponding period of 1875. The annual marriage-rate was equal to 16·9 per 1000 persons estimated to be living, against 18·3, 17·9, and 16·2 in the second quarters of 1873–4–5. The marriage-rate in the spring quarter of this year was identical with the average rate in the corresponding period of the 37 years 1838–74; it was lowest, 15·0, in the second quarter of 1842, and highest, 18·3, in the same season both of 1866 and of 1873.

The marriage-rate in the quarter now under notice, ending 30th June last, was equal to 12·3 and 12·5 per 1000 in the principally agricultural population of the Eastern and South-midland registration Divisions; and ranged upwards to 19·3 in the North-western, and 19·4 in the North-midland Divisions. In London the marriage-rate was equal to 20·0, an increase of one per thousand upon the rate in the spring quarter of 1875. The lowest county rates were 10·7 in Cambridgeshire, 10·8 in Huntingdonshire, and 11·2 in Cornwall; the highest rates 19·8 in Lancashire, 20·2 in Northumberland, 20·9 in Nottinghamshire, and 21·0 in Lincolnshire. The high marriage-rates in the counties of Lancaster, Northumberland, and Nottingham are probably due to the fact that these populations are for the most part engaged in mining and manufacturing industries, and contain an abnormal proportion of adults at the marrying ages. With regard to Lincolnshire, which is essentially an agricultural county, the high marriage-rate is not susceptible of the same explanation. An exceptionally large proportion of the marriages in this county appear to occur in the second quarter of the year. Thus in England and Wales only 25 per cent. of the marriages recorded during the three years 1873–4–5 occurred in the second or spring quarters, whereas in Lincolnshire the proportion was 36 per cent. The marriage-rate in Lincolnshire during the year 1875 was 15·2 per 1000, and differed but slightly from the average rate in other agricultural counties; the annual rate in the four quarters was, however, successively 10·7, 21·6, 13·0, and 15·7 per 1000. The Lincolnshire rate, which was but 11·0 per 1000 in the first quarter of this year, rose to 21·0 in the three months now under notice. The marriage-rate in all England is invariably highest in the fourth or autumn quarter of the year; in Lincolnshire, however, the second or spring quarter shows considerably the highest marriage-rate.

Compared with the average numbers of marriages in the three preceding corresponding quarters, those in the second quarter of this year showed an increase in London and in most of the home counties, whereas they had declined in the South-western counties (especially in Cornwall), in the Northern Counties, and in Wales. In Cornwall the marriages in the second quarter of this year showed a decline of 21 per cent. from the average number in the three preceding corresponding quarters. The marriage-rate in Cornwall declined from 16·1 in 1865 to 11·6 in 1868, and after an increase to 14·4 in 1873, declined again to 13·6 and 11·7 in 1874 and 1875.

Births.

During the third or summer quarter, ending 30th September, 216,167 births were registered, equal to an annual rate of 35·4 per 1000 of the estimated population. This birth-rate exceeded that which prevailed in the corresponding quarter of any preceding year since the commencement of civil registration in 1837, and was 0·9 per 1000 above the average rate during the corresponding period of the last ten years 1866–75, during which the birth-rate in the third quarter of the year ranged from 33·3 in 1866, to 35·3 in 1874. The sex proportion of the children whose births were registered during the quarter was 105 boys to 100 girls.

The annual birth-rate in the three months ending September last, which averaged 35·4 in the whole of England and Wales, ranged from 28·3 and 30·2 in the principally agricultural population of the South-western and South-eastern, to 39·3 and 40·9 in the mining and manufacturing population of the North-western and Northern Registration Divisions. The lowest county birth-rates in the quarter were 26·5 and 26·6 in Hereford and Cornwall; and the highest 41·4 in Stafford,

3 in Durham. In Cornwall the birth-rate showed a decline of 1·2 per 1000 it which prevailed in the corresponding quarter of 1875; and a decline of rred in Monmouthshire.

twenty large English towns furnishing weekly returns the birth-rate in the averaged 37·0 per 1000, and exceeded by 1·6 the average rate in the England and Wales; in the corresponding quarters both of 1874 and 1875 h-rate in eighteen of these towns was equal to 36·7 per 1000. The rate rter in these twenty towns ranged from 27·3 and 28·8 in Plymouth and n, to 41·6 and 49·3 in Oldham and Salford. In fifty other large towns the e averaged 37·1 per 1000, and while it was so low as 20·6 and 22·6 in nam and Bath, it ranged upwards to 46·5 and 46·6 in Wigan and Swansea. esidential suburbs of all large towns the birth-rate is invariably reduced by e proportion of domestic servants in the population; the low birth-rate towns as Brighton, Bath, and Cheltenham is probably due to a similar

Movement of the Population.

atural increase to the population of England and Wales, by excess of births hs registered during the three months ending 30th September was 96,258; rresponding periods of 1874 and 1875, the excess of births over deaths was 99 and 89,322 respectively. The actual increase of the population is by the balance between immigration and emigration. No available records immigration exist. It appears, however, from returns issued by the Board , that during the three months under notice, 40,946 emigrants left the arts of the United Kingdom at which emigration officers are stationed: lower number than in any previous corresponding quarter since 1862. ng 8079 who were foreigners, and distributing proportionally 672 whose ty was undistinguished, the emigrants of British origin during the quarter 867, including 22,455 English, 3405 Scotch, and 7007 Irish. The propor- emigrants, to a million of the population, were 926 from England, 965 from , and 1317 from Ireland. Compared with the average proportions of s during the third quarters of the three years 1873–4–5, the proportion last showed a decline of 33 per cent. in England, 39 per cent. in Scotland, and cent. in Ireland. Of the 32,867 British emigrants during the quarter September last, 52 per cent. left for the United States, 32 per cent. for the an Colonies, 11 per cent. for British North America, and 5 per cent. for all ces. The number of emigrants to the United States and to British North has steadily declined in recent years.

Prices, Pauperism, and Meteorology.

verage price of wheat during the quarter was 47*s.* 1*d.*, showing a further of 1*s.* 3*d.* upon the average prices that prevailed in the two preceding quarters ar; in the corresponding third quarters of 1874 and 1875 the average price, ruled so high as 55*s.* 5*d.* and 49*s.* 0*d.*, respectively. The mean whole- e of beef averaged 6$\frac{7}{8}$*d.*, and of mutton 7$\frac{6}{8}$*d.* per lb.: each of these prices a slight increase upon that which prevailed during the preceding three The average price per ton of the best seaborne coal in the London market, arge from the collier in the Thames, was 19*s.* 0*d.*, against 30*s.* 1*d.*, 23*s.* 3*d.*, 4*d.* in the third quarters of the three years 1873–4–5. The average price ls was 95*l.* 17*s.* 6*d.*, and showed a further increase upon the average prices quarters. On 21st July the highest quoted price was 97*l.* 10*s.* 0*d.*: the Consols has not been nearly so high since 1859, when the highest price was 97*l.* 5*s.* 0*d.* The minimum rate of discount charged by the Bank of was 2*l.* per cent. throughout the quarter. In the September quarter of minimum rate was so low as 2*l.* per cent., but only remained at this point weeks; on 19th April last the minimum rate was reduced to 2*l.* per cent., ained unchanged during the 23 weeks from that date until the end of er.

The average number of paupers relieved on the last day of each week in the quarter was 647,545, of which 130,349 received in-door, and 517,196 out-door relief. The number of in-door paupers exceeded that in the corresponding quarter of 1875 by 3·8 per cent., whereas the out-door paupers had decreased 6·9 per cent. In the first nine months of 1870 there were nearly six out-door to each in-door pauper; in the corresponding period of 1876 the proportion of out-door paupers to each in-door pauper had declined to four. During the five years 1870–75 pauperism steadily declined, the decrease being equal to 27 per cent.; the decrease was 10 per cent. among in-door, and 30 per cent. among out-door paupers.

The remarks upon the meteorology of the quarter, at the Royal Observatory, Greenwich, and the accompanying tables, furnished by Mr. James Glaisher, F.R.S., will be found on pp. 65–72. Throughout July, and until the 22nd of August, the weather was generally fine and hot; the temperature was particularly high during the four days ending 17th July, and the five days ending 17th August. The average daily excess of temperature during the 53 days ending 22nd August was $4\frac{1}{4}^{\circ}$. From the 23rd August until the 17th September low temperature generally prevailed, the average daily deficiency being equal to $3\frac{1}{2}^{\circ}$. A warm period, however, set in on the 18th September and lasted until the end of the month. The mean temperature of the quarter was 61°·8, and exceeded the average for the corresponding period in 105 years by 2°·1. In July the mean was 65°·9, and 4°·3 above the average. Since 1841 the mean temperature of July has only twice been so high as it was last quarter; it was 68°·1 in 1859 and 67°·5 in 1868. The mean in August was 63°·7, showing an excess of 2°·9; whereas in September it fell to 55°·8, and was 0°·8 below the average. The mean temperature of the quarter at 47 stations of observation ranged from 55°·7 at North Shields, to 63°·3 at East Tilbury.

The measured rainfall during the quarter at the Greenwich Observatory, was but 5·3 inches, and was 2·2 inches below the average in the corresponding three months in 61 years. In July only 0·7 of an inch of rain was measured, showing a deficiency of nearly 2 inches; in August and September 2·0 inches and 2·6 inches were respectively measured, neither amount differing considerably from the average. The rainfall at all the stations of observation between latitudes 50° and 55° averaged 8·5 inches, against 10·3 inches in the corresponding quarter of last year; between 51° and 52° the average fall last quarter was 7·3 inches, whereas between 53° and 54° it was 9·5 inches. The measured rainfall during the thirteen weeks ending 30th September in each of nineteen other large English towns furnishing returns exceeded that recorded at the Greenwich Observatory; it ranged from 6·4 inches in Leeds, to 10·7 and 13·0 inches in Plymouth and Bristol.

During the first nine months of 1876 the amount of rain measured at the Royal Observatory, Greenwich, was 13·7 inches, and was 4·5 inches below the average amount in the corresponding period of 61 years.

State of the Public Health; Deaths.

During the three months ending September last 119,909 deaths were registered, equal to an annual rate of 19·6 per 1000 of the estimated population. This death-rate was 1·4 per 1000 below the average rate in the corresponding quarter of the ten years 1866–75, and, excepting the rate in 1873 (19·5), was lower than that which prevailed in any of those years; in the remarkably hot summer quarter of 1868 the rate was 23·7, and was 4·1 in excess of the rate last quarter. The average death-rate in the third quarters of the 38 years 1838–75 was 20·6 per 1000; the summer rates in these 38 years ranged from 17·2 in 1860, to 30·6 in 1849. The summer of 1860 was unusually cold and wet, and in 1849 a severe epidemic of cholera prevailed.

The 119,909 included 62,560 deaths of males, and 57,349 of females; the male death-rate was equal to 21·0, and the female rate to 18·3 per 1000 persons living of each sex. In equal numbers living, the deaths of males in the quarter were as 115 to each 100 deaths of females; the proportion in the corresponding quarter of 1875 was 114 to 100.

eleven registration Divisions the annual death-rate among persons of
es last quarter ranged from 16·4 and 16·5 in the principally agricultural
of the South-western and South-eastern, to 21·5 and 22·9 in the Metro-
nd North-western Divisions. The death-rate was so low as 14·7 per 1000
Dorsetshire and Westmorland, whereas in the other counties the rates
upwards to 23·5 in Lancaster and 23·9 in Leicester. In equal numbers
53 persons died last quarter in Leicestershire to each 100 dying in
re and Westmorland. These figures, however, do not fully express the
the rate of mortality prevailing in the urban counties, where the age
on of the population would, sanitary condition being equal, produce a
th-rate than in rural counties. For instance, a thousand of the population
shire would, after due allowance for its age distribution, at English Life
tes of mortality, give 23·7 deaths in a year; whereas the deaths in a
of the population of Lancashire would not exceed 21·7 in a year, calcu-
he same table. The effect of the excess of children in the Lancashire
n is more than counterbalanced by the small proportion of persons aged
and upwards. A thousand of the population of Lancashire contains 138
under five years of age, and only 56 persons aged upwards of 60 years;
nd of the agricultural population of Dorsetshire, however, contains 130
nder five years, and no less than 95 persons aged more than 60 years.
ne death-rate in Lancashire should be 2 per 1000 lower than that in
re, whereas the rate last last quarter in Lancashire exceeded that in
re by 8·8 per 1000. A comparison of urban and rural death-rates,
correction for age distribution, considerably understates the excess of
due to aggregation in towns.

principal urban population of England and Wales the death-rate in the
vas equal to 21·7 per 1000, whereas it did not exceed 16·7 in the
or rural population; the urban rate was 2·0, and the rural rate 0·6,
ir average for the corresponding quarter of the last ten years. In equal
living the deaths in the urban districts were as 130 to 100 in the rural
the average proportion in the September quarters of the ten years
being 137 to 100. It appears, therefore, that the health of town popu-
ntinues to show, relatively, more improvement than the health of rural
ns.

of the largest English towns, including London, with an estimated popu-
nearly seven millions of persons, the death-rate averaged 23·1, and
the general urban rate by 1·4. The excess in the death-rate of our
tricts is usually largest in the summer quarter of the year, owing to the
al fatality of infantile diarrhœa. The rates in the 20 towns ranged
4 and 19·1 in Plymouth and Brighton, to 29·3 and 30·0 in Leicester and
The excessive rate in Leicester was almost entirely due to diarrhœa, and
lford to small-pox and diarrhœa. In 50 other large English and Welsh
ving a population of about two millions and three quarters, the death-rate
20·4, was 2·7 below the rate in the 20 largest towns, and 1·3 below
al urban rate. The lowest death-rates in these 50 towns were 14·1 in
14·2 in Middlesborough, and 14·4 in Reading; the highest rates were
St. Helens and Wigan, 24·6 in Lincoln, 24·9 in Preston, 25·6 in Bury,
in Stockport. The remaining urban population of England and Wales,
principally of small towns, includes about four millions and a half of
mong whom the death-rate last quarter was equal to 20·4, and corresponded
rate in the 50 towns before mentioned.

9,909 deaths at all ages included 37,289 of infants under one year of age,
72 per 1000 of the births registered, showing a decline of 11 per 1000
average proportion in the six preceding corresponding quarters. The
fant mortality last quarter was lower than that which prevailed in the
od of any of the last six years, when it ranged from 200 in 1870 to 173
Infant mortality during the six years 1870–5, which averaged 152, 133,
per 1000 respectively in the first, second, and fourth quarters, was equa
the third or summer quarters of those years. The high rate of infant

mortality in the summer quarter is due to the fatality of diarrhœa. In Wales the rate of infant mortality last quarter was only 122 per 1000, and in the agricultural population of the South-western Division but 125; whereas it was 192 and 194 per 1000 respectively in the principally manufacturing and mining population of the North-midland and Yorkshire Divisions. The lowest county rates of infant mortality were 101 in Wilts, and 103 in Dorset and Hereford; in Lancashire, however, the rate was 190, in Yorkshire 194, in Nottinghamshire 208, and in Leicestershire 256. These wide variations are almost entirely due to variations in the mortality from diarrhœa, which is in great measure dependent upon the proportion of urban population. The variations in the county rates of infant mortality do not, however, appear to be always governed by the proportion of diarrhœa fatality or of urban population. In Norfolk the rate of infant mortality last quarter was equal to 189 per 1000 births, whereas in Suffolk it did not exceed 116 per 1000. In Norfolk 38 per cent. of the population reside in towns, and in Suffolk the proportion is 34 per cent. It is evident, therefore, that there must be some local causes in operation to account for the comparative excess of infant mortality in Norfolk calling for investigation. In proof that the excess in Norfolk last quarter was not exceptional, it may be noted that during the year 1875 the proportion was 165 in Norfolk and 136 in Suffolk. In the twenty large English towns the proportion of infant mortality last quarter averaged 224 per 1000, and ranged from 163 and 184 in Plymouth and Oldham, to 292 and 365 in Norwich and Leicester. The contrast between the rates of infant mortality in Oldham and Leicester is the more remarkable on account of the large proportion of women employed in manufacture in each of these towns. The large excess of infant mortality in Leicester compared with that in Oldham is only partially explained by the remarkable mortality from diarrhœa in the former town. With reference to the rate of infant mortality in other large towns it should be noticed that the proportion of deaths under one year of age to births registered was as high as 316 in Yarmouth and 326 in Cheltenham.

The annual rate of mortality in the quarter among children and adults aged between one and 60 years was equal to 10·5 per 1000 persons living at these ages, and was 0·5 below the rate that prevailed during the same period of 1875. The deaths at these ages in the twenty large towns averaged 12·2 per 1000, and ranged from 9·7 in Brighton and Plymouth, to 16·2 in Manchester and 16·4 in Oldham. Among persons aged upwards of 60 years the rate of mortality in England and Wales averaged 55·7 per 1000, against 57·3 and 54·8 in the corresponding periods of 1874 and 1875. In the twenty large towns the annual death-rate among persons at these ages averaged 62·9; and while it did not exceed 51·1 and 52·7 in Leicester and Bradford, it ranged upwards to 75·8 in Salford and 96·2 in Liverpool. Leicester during last quarter showed among the twenty largest towns the highest rate of infant mortality and the lowest death-rate among persons aged upwards of 60 years. Whereas in equal numbers living 157 deaths under one year of age were registered in Leicester to each 100 in Liverpool, among persons aged upwards of 60 years the proportion was but 53 in Leicester to 100 in Liverpool. These figures appear to afford conclusive evidence that the high rate of infant mortality in Leicester is due to special and exceptional causes rather than to the general unsatisfactory sanitary condition of the population of that town.

The 119,909 deaths from all causes in the quarter included 14,755 which were referred to diarrhœa, 3772 to scarlet fever, 2443 to fever, 1683 to measles, 1491 to whooping-cough, 601 to diphtheria, and 543 to small-pox; in all 25,288 deaths resulted from these seven principal zymotic diseases, and were equal to an annual rate of 4·1 per 1000, which was 0·7 below the average zymotic rate in the six preceding corresponding quarters. The zymotic rate was lower last quarter than in the summer quarter of any of the six years 1870–5, except in 1873 when it did not exceed 3·9. The death-rate from these seven diseases in the three months ending September last ranged in the eleven registration Divisions from 2·2 in Wales and 2·6 in the South-western, to 5·1 and 5·5 in the Metropolitan and the North-western. The zymotic rate was but 1·4 in Dorsetshire, 1·5 in Westmorland, and 1·8 in Wiltshire and Suffolk; whereas it was so high as 5·1 in

tshire, 5·3 in Nottinghamshire, 5·8 in Lancashire, and 7·5 in Leicester-Exclusive of the borough of Leicester, the zymotic rate in Leicestershire l to 5·0 per 1000, the excess both in the borough and in the ex-municipal f the county being mainly due to the exceptional fatality of diarrhœa. In ty large towns the rate from these seven diseases averaged 6·0 per 1000, red but slightly from that which prevailed in the summer quarter of 1875; everal towns it ranged from 3·3 and 3·5 in Plymouth and Brighton, to d 11·5 in Salford and Leicester. Plymouth and Brighton suffered but from epidemic diarrhœa, whereas the rates from this disease were excessively h in Salford and Leicester, small-pox being also epidemic in Salford. In er large towns the zymotic rate averaged 4·8; while it was as low as Merthyr Tydfil, and 1·8 both in Hastings and Reading, it ranged upwards Cheltenham, 8·7 in Stockport, and 8·8 in St. Helens. All these excessive rates were mainly due to diarrhœa; scarlet fever, however, was fatally in Cheltenham, and the deaths from scarlet fever, diphtheria, and fever merous in St. Helens.

scussing the zymotic fatality in the summer quarter of the year, *diarrhœa* y claims special notice, as the death-rate in different parts of the country e principal zymotic diseases is more or less directly governed by the epidemic prevalence of this disease among infants. It is well to bear in at of the total deaths referred to diarrhœa in England during the three nding September an average proportion equal to about 80 per cent. is of nder one year of age. During last quarter 14,755 deaths were referred to , equal to an annual rate of 2·4 per 1000; the diarrhœa-rate in the summer of the six preceding years averaged 2·6, and ranged from 3·1 in 1870 to 874. The mean temperature was exceptionally high during July and the e weeks of August; and the rainfall in July was unusually small. Judging weekly returns relating to a population of nearly seven millions of persons the twenty large towns the weekly fatality of diarrhœa increased rapidly ut July, and reached its maximum during the fortnight ending 5th August, ich it rapidly declined during the remaining weeks of the quarter. While it more than probable that the rapidly increasing fatality of diarrhœa in s mainly due to the hot and dry weather which prevailed during that month, thy of note that the still higher temperature in the middle of August did k the decline in the weekly number of deaths from this disease in our largest The direct effect of heat upon the fatality of diarrhœa is proved by the low tes from this disease during the comparatively cold summers of 1860 and d by the highest rate having occurred in the remarkably hot summer of If heat, however, be the principal element in the production of diarrhœa it ains to be explained why, in its causation of diarrhœa fatality, it operates sly in different years and in different localities. English diarrhœa-rates in nerally exceeded those which prevailed in 1875. This is probably due to of July and August, but the fact that in many portions of the English n the diarrhœa-rate in 1876 showed a marked decline from that in 1875, any exceptional variations of local temperature, appears to require ex- n. It points conclusively to other controlling elements in the causation of than high temperature; these are in all probability to be found in what is od by the sanitary condition of a population.

iarrhœa rate last quarter in the different registration Divisions ranged from Wales and 1·13 in the agricultural South-western counties, to 3·17 3 in the North-western and Metropolitan Divisions. In North Wales the te from diarrhœa was only 0·58 per 1000, and in Herefordshire and rland but 0·62 and 0·65. The highest county diarrhœa rates were Warwick, 3·7 in Nottingham, and 4·9 in Leicester. Infantile diarrhœa tially an urban disease. Among the fourteen millions living in the town the annual death-rate from diarrhœa last quarter was equal to 3·3 , whereas in the remaining or rural population of ten millions it was not than 1·2. In the twenty largest towns the rate was 3·9, and slightly d that which prevailed in the summer quarter of either 1874 or 1875; in er large towns it was equal to 3·1, and was somewhat lower than in the

third quarter of 1875. In the whole of England and Wales, exclusive of the seventy large towns, the summer diarrhœa rate was equal to 1·6 per 1000 both in 1875 and 1876. Notwithstanding the higher temperature of last summer diarrhœa was generally less fatal in England and Wales, except in the twenty largest towns, where its fatality had increased. In these twenty towns the diarrhœa rate was equal to 1·8 in Plymouth and 2·4 in Brighton and Oldham, and ranged upwards to 5·9 and 8·4 in Hull and Leicester. Diarrhœa was nearly twice as fatal in Bristol last summer as in the summer quarter of either 1874 or 1875, whereas in Newcastle-upon-Tyne it showed a further decline from the rates which prevailed in two previous corresponding quarters. Leicester, again, showed the same exceptional fatality from diarrhœa which has in recent years attracted so much attention. During the summer quarters of the three years 1874, 1875, and 1876, the annual death-rate from diarrhœa in this town was successively 8·5, 9·2, and 8·4 per 1000, and averaged 8·7; whereas the average diarrhœa rate in the twenty largest towns during the same summer quarters did not exceed 3·7. It still remains to be explained why the diarrhœa fatality in Leicester should exceed by 135 per cent. the average fatality from this disease in twenty of our largest towns. In the fifty towns, the diarrhœa rate during last quarter was less than one per 1000 both in Merthyr Tydfil and Reading; whereas it was equal to 6·3 in Stockport, 6·5 in Yarmouth, and 6·8 in Wigan. The low death-rate from diarrhœa throughout Wales, and especially in Merthyr Tydfil, was more remarkable last quarter than in the summer either of 1874 or 1875.

The deaths referred to *simple cholera* and choleraic diarrhœa were 433, against 368 and 323 in the two preceding corresponding quarters; of these, 117 were recorded in London, 59 in Lancashire, and 92 in Yorkshire. There appears to be considerable want of uniformity in the judgment which guides medical practitioners in certifying the cause of death from epidemic summer diarrhœa; this causes marked discrepancies in the numbers of deaths referred to cholera, which include all those certified from choleraic diarrhœa. One or two examples of the apparent reference of ordinary cases of summer diarrhœa to English cholera or the reverse may be noted. In the sub-district of Carlton, near Nottingham, 10 deaths were referred to English cholera, and but 3 to diarrhœa; whereas in the other neighbouring sub-districts of Basford District 97 deaths from diarrhœa were registered and but 3 from cholera. The Medical Officer of Health for Basford (Mr. V. Whitgreave) informs the Registrar General that all the 10 deaths registered from cholera in Carlton sub-district were certified by the same practitioner, who refers to cholera all cases of collapse supervening upon diarrhœa. In West Derby sub-district 11 deaths were referred to cholera, whereas only 4 others occurred in the whole of the Districts of Liverpool and West Derby. In Holbeck 9 were returned, and only 4 in Leeds, Hunslet, and Bramley. In Dewsbury sub-district 15 deaths were referred to cholera and not more than 13 to diarrhœa, while in the rest of the District the deaths from diarrhœa were 85 and from cholera but 4.

The 3772 deaths referred to *scarlet fever* during last quarter showed an increase of 500 upon those returned in the preceding three months, although they were considerably below the numbers in the corresponding quarters of 1874 and 1875. The largest increase in the fatal cases of scarlet fever occurred in the South-western and West-midland Divisions; especially in the counties of Somerset, Gloucester, and Hereford. The disease also showed increased fatality in London, Hampshire, and Cornwall. The annual death-rate from this disease was equal to 0·62 per 1000, against 1·02 and 0·76 in the two preceding corresponding quarters; in the second quarter of this year, however, it did not exceed 0·53, and in the second quarter of 1873 it was but 0·36. During the three months ending September last the annual death-rate from scarlet fever was but 0·22 per 1000 in the Eastern, whereas it ranged upwards to 0·71 and 0·74 in the South-western and South-eastern Divisions. The counties of Huntingdon, Westmorland, and Cumberland were almost free from scarlet fever fatality, whereas the disease caused a death-rate of 1·29 in Somersetshire, 1·35 in Gloucestershire, 1·42 in Leicestershire, and 2·02 in Herefordshire. In the 20 largest English towns, the scarlet fever rate averaged 0·74, and but slightly exceeded the general rate in England and Wales; in Portsmouth it was so high as 5·3 (showing a further increase upon the rates prevailing in the two preceding

rs of the year) and it exceeded one per 1000 in Leeds, Sheffield, Sunderland, icester. Among the 50 other large towns, scarlet fever was severely epidemic ldiff, Northampton, Southampton, Barrow-in-Furness, Cheltenham, and Bath. isease also showed fatal prevalence in Alverstoke, Falmouth and Penryn, water, Gloucester, Hereford, Abergavenny, Pembroke, Houghton-le-Spring, alton. Among the other localities which suffered exceptional fatality from fever during the quarter may be mentioned the parish of Olney, Biggleswade, am, the parish of Tillingham (Essex), South Molton, Truro, the parish of eld (Leicestershire), the township of Litton (Derbyshire), the township of ley (Lancashire), and Pickering. With reference to the outbreak of scarlet n the parish of Tillingham (Essex), the local registrar states that the drainage ective and the water supply bad, and that upwards of 200 cases of the have occurred among the 1200 inhabitants. Scarlet fever has shown ing prevalence in Bridgwater since the beginning of the year: continual nce of zymotic epidemics in this borough affords most unsatisfactory evidence anitary condition.

2443 deaths referred to *fever*, including typhus, enteric or typhoid, and nguished forms of fever, showed a further marked decline from the numbers d in the corresponding quarters of the six preceding years. The death-rate ever was equal to 0·40 per 1000, which was 31 per cent. lower than the rate in the summer quarters of the six years 1870–75. In the principal districts of England and Wales the fever-rate last quarter averaged 0·43, s in the remaining rural population it was 0·36. In the Eastern and politan Registration Divisions the death-rate from fever was but 0·25 and espectively; it ranged upwards, however, to 0·52 and 0·53 in the Yorkshire orth-western Divisions. Thus in the counties of Chester and Lancaster rsons died from fever last quarter to 100 in an equal number living in the s of Essex, Norfolk, and Suffolk. In Sussex the fever-rate was so low as whereas both in Lancashire and the West Riding of Yorkshire it was equal 7. In the twenty large English towns the fever-rate averaged 0·41; it was 12 in Brighton, but ranged upwards to 0·71 in Leicester and 0·72 in Leeds. fever-rate also occurred in Worcester, Huddersfield, Oxford, Bolton, Stock- d St. Helens; in the latter town it was so high as 1·52. Fever, principally or typhoid, was exceptionally fatal in Honiton, Callington, Leamington, ort, Stretford (Lancashire), Ystradyfodwg, and in the rural sub-district of ster (Radnorshire). In the borough of Southport the deaths from fever an annual rate of nearly three per 1000, which was more than five times as the fever-rate in Liverpool. An extensive outbreak of typhoid fever is d in the Local Board District of Stretford, near Barton-upon-Irwell, causing rate exceeding three per 1000. The continued and marked decline in the of typhoid fever in England may fairly be claimed as the results of recent l sanitary progress.

annual death-rate from *measles*, which in the four preceding quarters had increased from 0·19 to 0·54 per 1000, declined in the three months ending ber last to 0·28. The disease was comparatively fatal in Herefordshire, lshire, and Shropshire, whereas no death resulted therefrom either in Cam- hire or Rutlandshire. The death-rate from measles in the 20 towns averaged nd but slightly exceeded the general rate in England and Wales, whereas equal to 0·67 in Plymouth, 0·71 in Leicester, and 0·85 in Bradford. s also showed exceptional fatality in Dover, Stoke-upon-Trent, Dudley, ry, Stockport, Chichester, Trowbridge, Poole, Burslem, Ashton-in-Maker- d Barnsley.

1491 deaths referred to *whooping-cough* showed a rate of 0·24 per 1000. ality from this disease was lower than in any quarter since the beginning of but was excessive in Milton, Ramsgate, Biggleswade, Coventry, and um.

fatal cases of *diphtheria* were fewer than in any quarter since the third of The disease showed, however, a relatively high rate of mortality in Warwick- incolnshire, Northumberland, and North Wales; and was exceptionally fatal ington (Oxfordshire), Penkridge, Brailes (Warwickshire), Gainsborough, and

Hexham. This disease in its most fatal epidemic form is of more frequent occurrence in small villages than in large towns. In the parish of Brailes, near Shipston-on-Stour, which has a population of less than 1300 persons, a remarkable outbreak of diphtheria has recently occurred; during the six months ending September last no less than 26 deaths occurred from this disease within the parish, being equal to an annual rate of 40 per 1000 persons living. This outbreak has been the subject of a Local Government Board inquiry by one of its medical inspectors.

In the last quarter of 1875 only 149 deaths were referred to small-pox in the whole of England and Wales, showing a considerably lower fatality from this disease than in any quarter since civil registration was established in 1837. During the first three quarters of this year the deaths from small-pox were successively 262, 501, and 543. The number of fatal cases in the three months ending September last showed but an increase of 42 upon those returned in the preceding quarter; of the 543 in England and Wales, 368 occurred in Lancashire, 110 in London, and only 65 in the rest of the country. No death from small-pox was registered either in 23 of the English counties, or in 13 of the 20 largest towns. The 368 fatal cases registered in Lancashire included 157 in Manchester and Salford (35 of which occurred in the Monsall Hospital), 131 in Liverpool, 10 in Blackburn, and 8 ih Southport. In the township of Bispham (Lancashire) 5 fatal cases of small-pox occurred in one family, being the only deaths from this disease in the sub-district. The 43 deaths from small-pox occurring out of London and Lancashire, included 5 in Minster (Kent), 6 in Bristol and Clifton, 6 in Cheshire, 16 in the West Riding of Yorkshire, and 7 in Wales. In so large a proportion of the medical certificates relating to deaths from small-pox is all reference to vaccination omitted, that no complete statistics as to the proportional mortality among vaccinated and unvaccinated persons can be compiled. In the year 1874, of 2,162 fatal cases of small-pox, only 666, or 31 per cent., were certified as vaccinated or unvaccinated; the remaining 1,496, or 69 per cent., were "not stated" as to vaccination. Among the fatal cases of small-pox in 1874 certified as vaccinated, only 21 per cent. were of children under ten years of age, whereas among the unvaccinated cases the proportion of children at this age was 54 per cent. The want of co-operation on the part of many members of the medical profession in furnishing reliable information as to the vaccination of persons dying from small-pox is much to be regretted. During last quarter, of 91 fatal cases of small-pox in Everton, in the borough of Liverpool, 75 were "not stated" as to vaccination; and in 65 of 75 fatal cases in Regent Road sub-district of Salford, no information relating to vaccination was given. In London the deaths referred to small-pox, which had been but 6 and 7 in the last three months of 1875 and the first three of 1876, rose to 26 in the quarter ending June, and further increased to 110 during July, August, and September last. This is the highest quarterly number of deaths from small-pox registered in the Metropolis since the epidemic of 1871–72. Of the 110 deaths from small-pox in London 62 occurred in hospitals and 48 in private dwellings; 42 were of children under ten years of age, 17 of persons aged between ten and twenty years, and 51 were of adults aged upwards of twenty years. Excluding the deaths of a mechanical engineer, of a solicitor's clerk, a grocer's wife, and three children of licensed victuallers, the whole of the fatal cases of small-pox in London occurred among the labouring classes. The 110 deaths included 36 which were certified as vaccinated, and 49 as unvaccinated; in 25, or 23 per cent., of the cases the medical certificates gave no information as to vaccination. Among the vaccinated cases only 3 were of children under ten years of age; whereas, of the 49 cases certified as unvaccinated, 30, or 61 per cent., were of children aged under ten years. No less than 92 per cent. of the vaccinated persons who died from small-pox in London last quarter were of persons aged over ten years.

In workhouse establishments, hospitals, and lunatic asylums 10,037, or 8·4 per cent., of the deaths were registered during the quarter; this proportion showed a slight excess upon the average per-centage in the six preceding corresponding quarters. In twenty of the largest English towns 5259 deaths in institutions were recorded, equal to 13·1 per cent. of the total deaths, whereas in the rest of England the proportion did not exceed 6·0 per cent. The per-centage of insti-

deaths in these twenty towns ranged from 6·1 and 6·3 in Oldham and land, to 14·8 and 16·7 in Liverpool and London.

deaths referred to different forms of violence in the quarter were 4590, numbers increasing from 4173 to 4372 in the three preceding corresponding rs. The death-rate from violence was equal to 0·75 per 1000 persons living, newhat exceeded that which prevailed in recent summer quarters. In the ally agricultural population of the Eastern and South-western Divisions the rate from violence was equal to 0·57 and 0·59 per 1000 respectively, s it was 0·84 and 0·88 in the North-western and Metropolitan Divisions. twenty large towns the violence-rate averaged 0·83 per 1000, and ranged ·36 and 0·38 in Brighton and Norwich, to 0·97 and 1·20 in Birmingham verpool.

ing the quarter 6459, or 5·4 per cent. of the deaths were inquest cases, and red from the certificates of coroners, slightly exceeding the average rate corresponding quarters of the six years 1870–75. In the twenty large towns r-centage averaged 5·8, and ranged from 2·4 in Sheffield to 7·6 in Man-r. No stronger evidence of the want of uniformity in the discretion exercised oners as to the necessity for holding inquests could be adduced, than the fact an equal number of deaths more than three times as many inquests are held hchester as in Sheffield.

Health of Foreign Cities.

ummary of the weekly returns with which the Registrar General is favoured ious municipal authorities abroad, shows that the average annual death-rate the third quarter of 1876, in twenty-five Indian and Foreign cities, was per 1000, against 23·1 in twenty of the largest English towns. The population se twenty-five Foreign cities is estimated at about eleven millions of persons. west death-rates in these cities were 19·5 and 21·5 in Christiania and Turin; as the rate was equal to 33·8 in New York, 35·6 in Munich, 36·7 in Berlin, in Breslau, 42·0 in Buda-Pesth, and 48·3 in Alexandria. In the thirteen taken to represent the quarter, cholera caused 186 deaths in Calcutta, 322 mbay, and 605 in Madras. In Paris 650 deaths were referred to typhoid equal to an annual rate of 1·41 per 1000 persons living, which was seven as high as in London, where the rate from the same disease did not exceed per 1000. The fatality of small-pox in Paris exceeded that in London. pox was also somewhat prevalent in Vienna, Rome, Naples, and Brussels. rlin 261 deaths were referred to diphtheria, and 209 to typhoid fever. heria was fatally prevalent in New York and Brooklyn, and typhoid fever l 263 deaths in Philadelphia.

PRELIMINARY TABLES.

Note.—The three months January, February, March, contain 90, and in leap year, 91 days; the three months April, May, June, 91 days; and each of the last two quarters of the year, 92 days. For this inequality a correction is made in calculating the rate of mortality in the different quarters of the year. The annual rate is the mean of the four quarterly rates.

Note.—The deaths in Manchester and Bristol include paupers belonging to these cities who died in Workhouses situate outside the Municipal boundaries.

* The figures for the English towns are the numbers enumerated in April 1871, raised to the middle of 1876 by the addition of five and a quarter years' increase, calculated on the rate which prevailed between 1861 and 1871. The population of Dublin is taken as stationary at the number enumerated in April 1871.

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the last column approximately represent, are Municipal or Parliamentary. Imp^{t} D. signifies an Improvement District.

* For method of framing these estimates see note * to Table VI. As the population of Devonport, Coventry, Macclesfield, and Ashton-under-Lyne declined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the present population of Dudley and Wigan have been based upon local information as to the increase of the inhabited houses in these two boroughs between 1871 and 1875.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the towns, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where the Workhouse is situate outside that area.

nnual Death-rate from **Diarrhœa** in ENGLAND, and in 70 LARGE TOWNS, during the Third Quarter of each of the Years 1874, 1875, and 1876.

ROMFORD (*part of*)	181	83	24	44·3	20·3	5·9

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase since 1871 has been the same as that which prevailed between 1861 and 1871. In calculating the rates of mortality for this Table a proportion of the deaths recorded in the two Middlesex County Lunatic Asylums, situated in the Districts of Uxbridge and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts in the Outer Ring.

TABLE XIII.—**Births** and **Deaths** in the **Third Quarter** of 1876 in **25 Foreign Cities.**

* The *Registration* or *Union Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ more or less from the boundaries of Counties (proper).

† The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

‡ See page 14, note †.

NOTE.—*The Registrars alone must be considered responsible for the opinions expressed in the foot notes respecting the prevalence of epidemic diseases, also as to the statements respecting sanitary arrangements, &c. &c.)*

N COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS of ENGLAND.

* The *Superintendent Registrars' Districts* are collections of contiguous Parishes or Places, nearly always identical with the Poor Law Unions of the same names; they are 632 in number, and are here arranged topographically under the Registration Counties.

† These figures have been furnished to the Registrar-General by the Ordnance Survey Department. They do not include space occupied by foreshore or tidal water of rivers and creeks.

‡ See page 14, note †.

* The *Sub-districts* (2192 in number) are sub-divisions of *Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

† For London the numbers of Births and Deaths, as well as the details given, "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks, viz., from 2nd July to 30th September 1876.

I.—LONDON.—Registration Sub-districts—*continued.*

The 3 deaths from small-pox occurred in Acton Green.
Of the 7 deaths from diphtheria, 4 occurred in Manuden (3 in one house), and 3 in Elsenham.
Of the 6 deaths from scarlet fever, 3 occurred in July, 1 in August, and 2 in September.
A low kind of fever has been prevalent in the Parish of Redbourn, but the Medical Officer of Health having ascertained that
ten from different wells is impure, the evil has been remedied, and the Registrar states the place is becoming more healthy.

III.—SOUTH MIDLAND COUNTIES.—Registration Sub-districts—*continued.*

* 193 : 2.—The Registrar says the drainage is defective, the water supply bad, and that there have been upwards of 200 cases of scarlet fever in the parish of Tillingham.

† 197 : 2.—The 4 deaths from fever were described as typhoid or enteric, and occurred in Witham.

‡ 201 : 3.—Of the 4 deaths from diphtheria, 3 occurred in July.

§ 205 : 1.—The 2 deaths from fever were described as typhoid, and occurred at the same house in the parish of Rede.

IV.—EASTERN COUNTIES.—Registration Sub-districts—*continued.*

let fever, typhoid fever, and diarrhœa have prevailed to a great extent, though only one case of typhoid fever proved
ths from violence were caused by a collision on the Somerset and Dorset Railway.
he 23 deaths from scarlet fever, 8 were registered in August, and 15 in September.
sanitary authorities are taking active measures to destroy the propagation and increase of scarlet fever.
he 9 deaths from diarrhœa, 8 were of children under one year of age. The 3 deaths from diphtheria occurred in one house
tages of 7 of the persons aged 60 years and upwards, whose deaths were registered, averaged 86 years.
3 deaths from small-pox were "not stated" as to vaccination.

he whole of the deaths from diphtheria occurred in Penkridge.
e Registrar says measles and scarlet fever have been prevalent in the Parish of Cannock, but are declining, no death having
from either cause.
he Registrar accounts for the high mortality from diarrhœa to the great neglect of the lower orders to the premonitory
disease.

VI.—WEST MIDLAND COUNTIES.—Registration Sub-districts—*continued.*

* 429 : 2.—The death of a person was registered, whose age was stated to be 102 years.
† 430 : 2.—The ages of the 5 persons, aged 60 years and upwards, whose deaths were registered, averaged 78 years.
‡ 431 : 4.—The large number of deaths of children is due partly to the high mortality from diarrhœa, which occurred principally at Bulwell.
§ 431 : 6.—The 10 deaths from cholera were described as English cholera, and were certified by the same practitioner; but the Medical Officer of Health states that "no greater importance need be given to these cases than to the usual autumnal diarrhœa."
‖ 433 : 7.—Of the 17 deaths in Public Institutions, 16 occurred in the General Hospital.
¶ 436 : 1.—The Registrar says small-pox does not prevail.

VII.—NORTH MIDLAND COUNTIES.—Registration Sub-districts—*continued.*

h one exception, the 13 deaths from scarlet fever occurred in Lower Widnes.
e 10 deaths from diphtheria, 3 occurred in July, 5 in August, and 2 in September.
16 deaths from fever were described as typhoid or enteric, and all occurred within the borough of Southport. Of the 8
l-pox, 2 were certified as vaccinated, and 1 as unvaccinated. The Registrar says the disease has now disappeared.
5 deaths from small-pox occurred at Bispham in one family, 2 were certified as unvaccinated.
e 19 deaths from scarlet fever, 5 occurred in the township of Atherton, and 14 in the township of Tyldesley.
3 deaths from diphtheria occurred in one house; the Medical Officer of Health has suggested some improvements.

* 464 : 3.—There is an extensive outbreak of typhoid fever in the village of Stretford. The local board at their next meeting will probably suggest something to be done to arrest its progress.

† 465 : 4.—The 9 deaths from small-pox were "not stated" as to vaccination.

‡ 466 : 4.—Of the 75 deaths from small-pox, 4 were of vaccinated, 6 of unvaccinated persons, and 65 were "not stated" as to vaccination.

§ 467*a* : 1.—Of the 37 deaths from small-pox, 35 occurred in the Monsall Fever Hospital which is a branch of the Manchester Royal Infirmary.

‖ 468 : 8.—The majority of the deaths from scarlet fever occurred among the scholars attending a school in Hollingworth. The school has been closed, thoroughly cleansed, and disinfected, and the epidemic appears to be abating.

¶ 469 : 1.—The 2 deaths from small-pox were of vaccinated persons.

** 470 : 9.—Scarlet fever has been confined to the most populous part of the sub-district.

VIII.—NORTH WESTERN COUNTIES.—Registration Sub-districts—*continued.*

Registration districts.	Area in Statute Acres.	Enumerated Population, 1871.	Births: Registered in the Quarter ending 30 Sept. 1876.	Deaths: Average in Quarters ending 30 Sept. in the 3 Years 1873-75. * 481*a*: 1.—The civil parish and municipal borough of Barrow-in-Furness, as extended by the Barrow-in-Furness Corporation Act, 1875, has been severed from the Dalton (481 : 4) sub-district of Ulverston, and constituted a separate Superintendent Registrar's district from 1st July 1876. Of the 31 deaths from scarlet fever, 6 were registered in July, 12 in August, and 13 in September.

† 486 : 4.—The 2 deaths from scarlet fever occurred in the village of Dishforth, one in July, the other in September. The Registrar says there was another death on 1st October.

‡ 488 : 2.—The 73 deaths are said to include 33 deaths of residents, 16 of visitors, and 24 registered in the rural district. Of the 2 deaths from small-pox, the first was imported from the neighbourhood of Manchester by a visitor, and the second occurred to a man employed by the undertaker in the former case.

IX.—YORKSHIRE.—Registration Sub-districts—*continued.*

† The Registrar says there have been about 20 cases of small-pox, confined to one locality in Goole, imported by a man and were brought from Rawcliffe to the Fever Hospital. There are no fresh cases.
‡ Of the 9 deaths from scarlet fever, 7 occurred in the town of Selby.
§ The ages of the 4 persons aged 60 years and upwards, whose deaths were registered, averaged 82 years.
The 2 deaths from diphtheria were of brothers. There has been no other case since.
Of the 11 deaths in Public Institutions, 8 occurred in the East Riding Lunatic Asylum.

* 526 : 3.—The 22 deaths from scarlet fever occurred in the Borough, which includes Old Malton, New Malton, and Norton. Prompt and more active attention is required from the authorities who allow the refuse from the slaughter-house to be too near the town.
† 530 : 2.—Of the 10 deaths from scarlet fever, 7 were registered in July, and 3 in September; the disease is now decreasing.
‡ 531 : 2.—Of the 13 deaths from scarlet fever, 2 occurred in July, 8 in August, and 3 in September.

† The Registrar says fever still exists at Gilvach Coch (Llandyfodog).
‡ The sub-district of Llansamlet, prior to 1st July 1876, was included in the Superintendent Registrar's district of Neath (587
§ The 2 deaths from diphtheria occurred in Rhandir Uchaf.
The ages of the 4 persons aged 60 years and upwards, whose deaths were registered, averaged 82 years.
Of the 23 deaths from scarlet fever, 17 were registered in September, in the parish of St. Mary; the Registrar reports that up
October, he has registered 18 more deaths from the same disease.

m this Table it will be seen that the highest temperature on—

July	14th	was	92°·3	at	Bristol	and	70°·0	at	Plymouth.
,,	15th	,,	96°·0	,,	Gloucester	,,	71°·5	,,	Guernsey.
,,	16th	,,	96°·2	,,	Bristol	,,	71°·3	,,	Hastings.
,,	17th	,,	94°·6	,,	East Tilbury	,,	63°·5	,,	Liverpool.
,,	22nd	,,	93°·3	,,	Bristol	,,	67°·0	,,	Milltown.
August	9th	,,	92°·0	,,	East Tilbury	,,	64°·1	,,	Cockermouth.
,,	13th	,,	97°·0	,,	Bristol	,,	70°·2	,,	North Shields.
,,	14th	,,	95°·8	,,	East Tilbury	,,	63°·0	,,	Liverpool.
,,	15th	,,	96°·0	,,	East Tilbury	,,	67°·0	,,	North Shields.
,,	16th	,,	93°·0	,,	Gloucester	,,	67°·3	,,	North Shields.
,,	17th	,,	91°·2	,,	Streatley	,,	64°·0	,,	North Shields.

m this it will be seen how great the difference of temperature was on these days of extreme etween places near the coast and those inland.

stimating the unusual high temperatures experienced in these two months, it may be stated that 35 years ending 1875, at Greenwich there were 7 Julys, viz., in the years 1841, 1842, 1855, 1861, 1862, and 1875, and 10 Augusts, viz., in the years 1841, 1844, 1845, 1848, 1853, 1855,

1860, 1862, 1865, and 1866, in which the temperature was not so high as 80°; and the instances in which it was about 90°, or higher, are as follows:—

July	1843	it was	89°·8	August	1842	it was	90°·5
„	1846	„	93°·3	„	1846	„	92°·0
„	1847	„	89°·0	„	1847	„	87°·3
„	1852	„	90°·3	„	1856	„	89°·8
„	1854	„	88°·7	„	1857	„	88°·0
„	1857	„	89°·7	„	1859	„	91°·3
„	1859	„	93°·0	„	1861	„	89°·3
„	1868	„	96°·6	„	1864	„	88°·6
„	1869	„	90°·9	„	1867	„	89°·0
„	1870	„	89°·7	„	1868	„	90°·5
„	1872	„	90°·9	„	1869	„	89°·0
„	1873	„	88°·7	„	1871	„	89°·2
„	1874	„	92°·0	„	1873	„	87°·3

Showing that the days of extreme high temperature about London have been more numerous than usual, and from the preceding table it would seem to have been general, The few days following July 22nd were of moderate temperature, and but little rain fell. Scarcely any rain fell in August till after the middle of the month, and the average excess of mean temperature for the 53 days ending August 22nd was 4°¼ daily. A complete change of weather set in on August 23rd, and rain fell very continuously. The temperature was low till September 17th, the average daily deficiency being 3°½ ; from September 18th to the end of the quarter it was warm, there being an average excess of daily temperature amounting to 2°¼, but rain fell almost on every day and the weather was bad.

The readings of the barometer at 160 feet above the level of the sea, in the vicinity of London, were alternately above and below their respective averages, from the 1st to the 8th of July; they were above their averages from the 9th to the end of the month, with the exception of three days, viz., 23rd, 28th, and 31st, which were 0·03 in., 0·25 in., and 0·22 in. respectively below their averages. The greatest departure in excess of the average was 0·42 in. on the 12th, and the greatest in defect was 0·25 in. on the 28th. From the 1st to the 13th of August the readings of the barometer were above their average values, with the exception of the 3rd, which was 0·30 in. below; the readings were alternately above and below their averages from the 14th to the 18th; and from the 19th to the end of the month the readings were all below their averages, that for the last day being 0·87 in. in defect. During the first 18 days of September the readings of the barometer were all below their average values, to the mean amount of 0·30 in.; they were above from the 19th to the 22nd, to the mean amount of 0·23 in., and from the 23rd to the end of the month the readings were again below their averages, to the mean amount of 0·26 in. The mean reading for the month was 29·620 ins., being 0·187 in. below the average. In the preceding 35 years there are only 2 instances of so low a barometer reading for the month of September as in the present year, viz. :—

In 1841 the mean reading was 29·624 ins., and in 1860 was 29·575 ins.

At Greenwich *the mean temperature of the air* for July was 7°·4 above that of June; that of August was 2°·2 below that of July; and that of September was 7°·9 below that of August. (From the preceding 35 years' observations the *mean temperature* of July above that of June is 3°·2; that of August below that of July is 0°·7 ; and that of September below that of August is 4°·1.)

The mean temperature of the air for July above that of June ; South of latitude 52° was 6°·7 ; and North of 52° was 5°·4 ; that of August below that of July over the whole country was 1°·8 ; and that of September below that of August, over the whole country was 6°·2.

The mean temperature of the air for July was 65°·9, being 4°·3 and 3°·8 above the averages of the preceding 105 years, and 35 years respectively; it was higher than any previous value back to 1841, with the exception of the year 1859 which was 68°·1, and the year 1868 which was 67°·5.

The mean temperature of the air for August was 63°·7, being 2°·9 and 2°·3 above the averages of the preceding 105 years, and 35 years respectively ; it was 3°·4 and 0°·7 above the values in 1874 and 1875 respectively.

The mean temperature of the air for September was 55°·8, being 0°·8 and 1°5 below the averages of the preceding 105 years, and 35 years respectively; it was 2°·1 and 4°·2 below the values in 1874 and 1875 respectively, but 1°·1 above that in 1873.

The mean temperature of the air for the quarter was 61°·8, being 2°·1 and 1°·5 above the averages of the preceding 105 years, and 35 years respectively.

The mean high day temperatures of the air were 5°·7 and 3°·8 above their respective averages in July and August ; but 2°·0 below in September.

The mean low night temperatures of the air were 2°·0 and 0°·3 above their respective averages in July and August; but 0°·6 below in September.

Therefore the days and nights in July and August were warm, but somewhat cold in September.

The mean daily ranges of temperature were 3°·7 and 3°·6 greater than their respective averages in July and August ; but 1°·4 less in September.

At Greenwich the increase of atmospheric pressure from June to July was 0·086 in., the decrease from July to August was 0·134 in., and the decrease from August to September was 0·148 in. Over the whole country the mean increase from June to July was 0·102 in. south of latitude 51° ; between latitudes 51° and 52° was 0·087 in. ; between 53° and 54° was 0·073 in. ; between 54° and 55° was 0·063 in. and north of 55° was 0·058 in. The decrease of pressure from July to August was very nearly the same everywhere ; its mean from all stations was 0·128 in. ; and the decrease from August to September was nearly of the same value south of 55°, viz., 0·160 in. ; and north of the parallel it was 0·129 in.

At Greenwich the fall of rain in July was 0·7 in., being 1·9 in. below its average; in August 2·0 in., being 0·4 in. below its average; and in September was 2·6 in., being 0·1 in. above average. The total fall in the quarter was 5·3 in., being 2·2 in. below the average. The owing are the only instances back to 1815, when the fall of rain in the 3 months ending tember 30th, was so small as that in the present year, viz.:—1815 it was 4·8 in.; 1818 it was in.; 1832 it was 4·5 in.; 1833 it was 5·3 in.; 1847 it was 4·3 in.; 1854 it was 5·3 in.; 1 it was 4·1 in.; 1864 it was 4·5 in.; 1868 it was 5·2 in.; and 1869 it was 4·9 in.

The average duration of the different directions of the wind referred to eight points of the pass, and the duration of each direction in each month in the quarter, were as follows:—

rection Wind.	July.			August.			September.		
	Average.	1876.	Departure from Average.	Average.	1876.	Departure from Average.	Average.	1876.	Departure from Average.
	d.	d.	d.	d.	d.	d.	d.	d.	d.
N.W.	2½	2	− ½	2	2	0	1½	6	+4½
N.	3½	5	+1½	3	3	0	3½	3	− ½
N.E.	3¾	2	−1¾	3	2	−1	5¼	0	−5¼
E.	1¼	2	+ ¾	1¼	6	+4¾	1¾	2	+ ¼
S.E.	½	1	+ ½	1¼	2	+ ¾	1¾	3	+1¼
S.	2½	2	− ½	3	3	0	2	4	+2
S.W.	10½	8	−2½	10½	10	− ½	7¼	7	− ¼
W.	4	8	+4	3¾	3	+ ¾	2½	3	− ½
Calm early.)	2½	1	−1½	3¼	0	−3¼	4½	2	−2½

The sign + denotes excesses over averages; in the month of July the largest number with this sign is opposite to W., in August to E., and in September to N.W.

The sign − denotes defects below averages; in July the largest number with this sign is opposite to S.W.; in August to E., but the number is small; and in September to N.E.

TE.—In reading this table it will be borne in mind that the minus sign (−) signifies *below* the average, and that the ign (+) signifies *above* the average.

hunderstorms occurred or Thunder was heard and Lightning seen in July on the 8th, at Somern, Norwich, and Halifax; on the 16th in the valley of the Trent, at Ross and Hereford; on 2nd at many places in the Midland Counties; on the 23rd at many places between latitudes nd 55°; on this day there was a very destructive storm north of London, accompanied with hailstones, and the damage done was very great; at Tottenham some houses, and many ervatories had nearly every pane of glass broken, on the side facing the storm, and trees were y stripped of leaves; on the 28th and 31st storms occurred at different places widely separated. ugust, on the 1st at Holkham, Halifax, and Hull; on the 15th, 16th, 17th, 18th, 19th, and at stations south of latitude 52°; at Bristol, on the 19th, during a heavy thunderstorm, rain o the depth of 3·57 in.; on the 24th, 26th, 30th, and 31st, at stations mostly north of ide 52°, but none of these storms were very heavy. In September, on the 3rd, 4th, 5th, 6th, 8th, and 9th, at stations mostly south of London; on the 15th at Ramsgate; on the 17th and at London and stations north; on the 22nd, 23rd, and 24th, at stations north of 52°; on the at Royston, and 29th at Helston.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING SEPTEMBER 30TH, 1876.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the fifth edition of his Hygrometrical Tables.

NOTE.—*The Barometer Reading*, GLOUCESTER, 1st August, 9h. a.m., 39·944 in., has been altered to 29·944 in.
" " HELSTON, 7th " 9h. a.m., 29·250 in., " 30·250 in.
" " " 25th September, 9h. a.m., 29·020 in., " 30·020 in.
" " CHISWICK, 28th " 3h. p.m., 39·374 in., " 29·374 in.

The Minimum Thermometer Reading, GLOUCESTER, 25th August, 31°·0, has been altered to 41°·0.

Second Rain-gauges are placed—

			July.		August.		September.		Total during the Quarter.	
At Beckenham,	at the height of 50 feet	*above the ground*,	the amount collected was	0·18 inches.		2·22 inches.		2·34 inches.		4·74 inches.
" Strathfield Turgiss,	38 feet	"	"	0·79 "		2·12 "		2·95 "		5·86 "
" Oxford,	22 feet	"	"	0·86 "		2·62 "		5·47 "		8·95 "
" Cardington,	36 feet	"	"	1·00 "		1·70 "		4·50 "		7·20 "
" Wisbech,	8 feet	"	"	1·69 "		1·79 "		3·55 "		7·03 "
" Nottingham,	89 feet	"	"	0·87 "		1·46 "		3·40 "		5·73 "
" Eccles (Manchester),	34 feet	"	"	2·91 "		2·94 "		3·33 "		9·18 "
" Milltown (Ireland),	40 feet	"	"	— "		— "		3·17 "		— "

NAMES OF STATIONS.	Mean Pressure of dry Air reduced to the level of the Sea.	Highest Reading of the Thermometer.	Lowest Reading of the Thermometer.	Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	Wind. Mean Estimated Strength.	Wind. Relative Proportion of N.	Wind. Relative Proportion of E.	Wind. Relative Proportion of S.	Wind. Relative Proportion of W.	Mean Amount of Ozone.	Mean Amount of Cloud.	Rain. Number of Days on which it fell.	Rain. Mean Amount col-

The highest temperatures of the air were at Beckenham, 96°·1; and at Gloucester, 96°·0.
The lowest temperatures of the air were at Allenheads, 33°·0; and at Milltown (Ireland), 34°·0.
The greatest daily ranges of the temperatures of the air were at Salisbury and Beckenham, both 24°·5.
The least daily ranges of the temperatures of the air were at Guernsey, 10°·5; and at North Shields, 10°·9.
The greatest numbers of rainy days were at Eccles, 56; and at Stonyhurst and Allenheads, both 55.
The least numbers of rainy days were at Gloucester, 30; and at Chiswick, 33.
The heaviest falls of rain were at Stonyhurst, 15·01 inches; and at Marlborough, 11·62 inches.
The least falls of rain were at East Tilbury, 3·82 inches; and at Ramsgate, 5·01 inches.

Quarterly Meteorological Table for different Parallels of Latitude.

PARALLELS OF LATITUDE, &c.	Mean Pressure of dry Air reduced to the level of the Sea.	Mean of all Highest Readings of the Thermometer.	Mean of all Lowest Readings of the Thermometer.	Mean Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	Wind. Mean Estimated Strength.	Wind. Relative Proportion of N.	Wind. Relative Proportion of E.	Wind. Relative Proportion of S.	Wind. Relative Proportion of W.	Mean Amount of Ozone.	Mean Amount of Cloud.	Rain. Mean Number of Days it fell.	Rain. Mean Amount col-

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 112.] **Marriages**—*July, August, September*, 1876.
Births and **Deaths**—*October, November, December*, 1876. [Price 9*d.*

General Register Office, Somerset House,
1st February 1877.

In the UNITED KINGDOM the *births* of 278,135 children, and the *deaths* of 159,005 persons of both sexes, were registered in the three months ending 31st December 1876. The recorded natural increase of population was thus 119,130.

The registered number of persons married in the quarter ending 30th September 1876 was 120,788.

The resident population of the United Kingdom in the middle of 1876 is estimated at 33,093,439; that of England and Wales at 24,244,010, of Scotland at 3,527,811, and of Ireland at 5,321,618. The birth-rate in the United Kingdom in the *fourth* quarter of 1876 was 33·3 per 1000, and the death-rate 19·1. The marriage-rate in the *third* quarter of 1876 was 14·5 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered by 2190 Registrars in all the districts of England during the quarter ending 31st December, and the MARRIAGES in 13,732 churches or chapels, in 7752 registered places of worship unconnected with the Established Church, and in 632 Superintendent Registrars' Offices, in the three months ending 30th September 1876.

The returns of Births, Deaths, and Marriages are, on the whole, satisfactory. The Marriages are for the quarter ending September 1876, and are below the average of that season; it remains to be seen whether the numbers have been made up in the Christmas quarter, which is the favourite marriage season in England. The depression of the marriage-rate below its usual standard is most striking in the Northern counties and in Wales. The Births are returned for the last three months of the year, and they exceed the average. The mortality in the same three months has been low; the rate is as much as 2·1 per 1000 under the average of the season. The improvement is most striking in the towns, where the rate of mortality fell 2·7; while in the country and the small towns it only fell 1·4 per 1000. The season has been remarkable for its mild temperature,

winds, and abundant rainfall. Small-pox, epidemic in London and in some of the large towns of Lancashire, has destroyed few lives in the rest of the kingdom. Scarlet fever is the ruling epidemic, and in some districts has been very fatal. The two diseases should be carefully watched.

The year 1876 has been remarkable in this respect; in each of the four seasons its birth-rate has been above, its death-rate below, the average.

Marriages.

During the three months ending September 1876 the number of persons married was 98,270, and 1364 less than the number in the corresponding quarter in 1875. The marriage-rate was equal to 16·1 per 1000 persons estimated to be living, was 0·3 below the average in the ten preceding summer quarters, and lower than the rate which prevailed in the corresponding period of any year since 1870. During the summer quarters of the 38 years 1838–75 the annual marriage-rate averaged 15·9 per 1000, and ranged from 13·4 in 1842 to 17·3 in 1865.

The marriage-rate during the third quarter of 1876 ranged, in the eleven registration Divisions, from 11·8 and 11·9 in the Eastern and South-Midland, to 19·0 and 20·5 in the North-western and Metropolitan. The lowest county rates were 9·8 and 9·9 in Huntingdon and Hereford, whereas the rates ranged upwards to 17·6 and 19·6 in Warwick and Lancaster.

The marriages in the third quarter of 1876, compared with the average numbers in the three preceding corresponding quarters, showed the largest proportional decrease in the Northern Counties and in South Wales, where the population is principally engaged in mining. In the South-eastern and in the Eastern counties the marriages showed an excess upon the same average. In South Wales the number of marriages was 13·1 per cent. below the average for the corresponding period in the three years 1873–4–5; the decrease was equal to 11·6 per cent. in Herefordshire, 9·5 in Northumberland, and 9·1 in Gloucestershire. On the other hand, the marriages showed an increase of 15·9 per cent. in Westmorland, 11·3 in Berkshire, 11·1 in Cumberland, 8·5 in Suffolk, and 8·4 per cent. in Warwickshire.

Births.

During the last three months of 1876, ending 31st December, 215,451 births were registered, equal to an annual rate of 35·3 per 1000. This birth-rate exceeds that which has prevailed in the fourth quarter of any year since 1837, except in 1872 and 1874, when it was 35·5 and 35·7 respectively; the average birth-rate during the fourth quarters of the 38 years 1838–75 did not exceed 32·6 per 1000, which was 2·7 below the rate in the corresponding period of 1876. The recent increase in the birth-rate is partly due to more complete registration. The sex proportion of the children whose births were registered during the quarter was 103 boys to 100 girls.

The annual birth-rate in the last three months of 1876, which averaged 35·3, ranged from 28·0 and 30·7 in the agricultural counties of the South-western and South-eastern, to 38·0 in the North-western and York, and 39·7 in the Northern Divisions; the population of the three last-mentioned Divisions is principally engaged in manufacture or mining. The lowest county birth-rates in the quarter were 25·7 in Cornwall and 26·6 in Westmorland; and the highest 41·7 in Stafford and 42·8 in Durham. The birth-rate in Cornwall showed a decline of 1·6 per 1000 from that which prevailed in the corresponding period of 1875.

In 20 of the largest English towns the birth-rate averaged 37·8, and exceeded by 2·5 the rate in England and Wales; the rate was but 30·3 in Brighton and 30·4 in Plymouth, whereas it ranged upwards to 42·2 in Newcastle-upon-Tyne, 42·7 in Birmingham, and 46·8 in Salford. The birth-rate in Salford is probably over-stated by an under-estimate of the present population of the borough. In 50 other large town districts the birth-rate averaged 36·4 per 1000, and while it was but 21·1 and 24·6 in Cheltenham and Cambridge, it was equal to 45·9 in Swansea, and 47·3 in Gateshead.

Movement of the Population.

The *natural* increase to the population of England and Wales during the last three months of 1876, by excess of births over deaths registered, was 93,533, against 70,567 and 77,958, respectively, in the fourth quarters of 1874 and 1875. As no available records of recent immigration exist, the *actual* increase of the population, as affected by the balance between immigration and emigration, is not known. Returns issued by the Board of Trade show that during the three months under notice 23,259 emigrants started from the various ports of the United Kingdom at which emigration officers are stationed: a lower number than in the corresponding period of any year since 1861. Distributing proportionally 1057 whose nationality was undistinguished, and excluding foreigners, the emigrants of British origin during the quarter were 20,268, including 14,376 English, 2001 Scotch, and 3891 Irish. The proportions of emigrants to a million of the population, were 593 from England, 567 from Scotland, and 731 from Ireland. Compared with the average proportions of emigrants during the fourth quarters of the three years 1873–4–5, the proportion during the last three months of 1876 showed a decline of 26 per cent. in England, 31 per cent. in Scotland, and 44 per cent. in Ireland. Of the 20,268 British emigrants during the quarter ending 31st December, 43 per cent. left for the United States, 39 per cent. for the Australian Colonies, 5 per cent. for British North America, and 13 per cent. for all other places.

Prices, Pauperism, and Meteorology.

The average price of wheat during the quarter was 48*s.* 2*d.*, showing a further increase of 1*s.* 1*d.* upon the average prices that prevailed in the three preceding quarters of the year; it exceeded by 3*s.* 10*d.* and 1*s.* 7*d.* respectively, the average prices in the fourth quarters of 1874 and 1875. The mean wholesale price of beef and of mutton averaged $6\frac{3}{8}d.$ and $7\frac{1}{8}d.$ per lb., each being five-eighths of a penny per lb. below the mean price which prevailed during the preceding three months. The average price per ton of the best seaborne coal in the London market, put in barge from the collier in the Thames, was 19*s.*, and corresponded with that in the three months ending September; in the corresponding quarter of the three years 1873–4–5, the average price of the best coals was respectively 30*s.* 8*d.*, 24*s.* 7*d.*, and 22*s.* 6*d.* The average price of Consols was 95*l.* 12*s.* 6*d.*, and showed but a slight decline from the high price which prevailed in the three months ending September. The minimum annual rate of discount charged by the Bank of England, which was fixed at 2*l.* per cent. on 19th April last, was so maintained throughout the 36 weeks ending December last.

The average number of paupers relieved on the last day of each week in the quarter was 656,646, of which 141,907 received in-door, and 514,739 out-door relief. The number of in-door paupers exceeded that in the corresponding quarter of 1875 by 4·2 per cent., whereas the out-door paupers showed a decrease of 5·8 per cent. In the first nine months of 1870 there were nearly six out-door paupers to each in-door pauper; in the corresponding period of 1876 the proportion of out-door paupers to each inmate of workhouse establishments had declined to 3·9. Pauperism has steadily declined since 1870; the average weekly number of paupers (in-door and out-door) relieved in 1876 showed a decline of 32 per cent. from the weekly average in 1870.

The remarks upon the meteorology of the quarter at the Royal Greenwich Observatory, and at other stations of observation, with accompanying tables, furnished by Mr. James Glaisher, F.R.S., will be found on pp. 65–72. Until 20th October the weather was warm, the mean temperature showing an average excess of $5\frac{1}{4}°$; between 21st October and 12th November a cold period prevailed, during which the mean temperature was $3\frac{1}{4}°$ below the average. From 13th November to the end of the year, with the exception of six days from 21st to 26th December, warm weather prevailed, the average excess of temperature during the 38 days being $4\frac{1}{4}°$; the excess during the last five days of the year was so large as $12\frac{1}{4}°$. The mean temperature of the quarter was 47°·0, being 3°·3 above the average of the preceding 105 years. The high mean temperature of the last quarter of 1876 was

only exceeded in seven of these 105 years. In October the mean was 52°·8, or 3°·2 above the average, and was only exceeded eight times during the 105 years. In November the mean was 44°·0, and was 1°·7 above the average. In December the mean was 44°·1, or slightly above the mean for November, and exceeded the average by 5°·0; only nine times during the 105 years did the mean temperature of December exceed that which prevailed in 1876. The mean temperature of the quarter at 47 stations of observation ranged from 43°·9 at Halifax, to 50°·9 at Guernsey.

The measured rainfall during the quarter at the Greenwich Observatory was 10·5 in., and exceeded by 3·4 in. the average amount in the corresponding three months of 61 years. In October 1·6 in. of rain were measured, showing a deficiency of 1·2 in.; in November the fall amounted to 3·1 in., and was 0·8 of an inch above the average. In December 5·8 in. were measured at the Royal Observatory, exceeding by 3·8 in. the average amount in 61 years, during which period there was no instance of so great a fall in December; this amount of rainfall within a month was only exceeded, during the 61 years, in July 1828 when seven inches were measured, and in October 1841 and November 1852, in each of which months the amount was six inches. At Greenwich, rain was measured on 52 of the 92 days of the quarter, and at Nottingham rain fell on 74 days. The measured rainfall during the quarter at 49 stations of observation ranged from 7·2 in. at Holkham (Norfolk), to 20·3 in. and 20·7 in. respectively at Guernsey and Truro.

The most remarkable meteorological features of the quarter were an unusually low atmospheric pressure, exceptionally high temperature, especially during October and December, and an unprecedentedly heavy rainfall during December. The lowest night temperature fell below the freezing point of water on but eight days during the quarter, against 32 and 19 cold nights in the last three months of 1874 and 1875. In the last quarter of 1872 the lowest daily temperature fell below 32° only four times during the quarter, but the mean temperature of the three months did not exceed 45°·3, whereas in the corresponding period of 1876 it was 47°·0.

The rainfall during the year 1876 at the Royal Observatory, Greenwich, amounted to 24·2 in., and was 1·1 in. below the average in 61 years; the remarkable deficiency of rainfall in the six months ending September was not counterbalanced by the unprecedented fall during December.

State of the Public Health; Deaths.

During the three months ending 31st December 121,918 deaths were registered, equal to an annual rate of 20·0 per 1000 of the estimated population in the middle of the year. The death-rate was 2·1 per 1000 below the average rate in the corresponding period of the ten years 1866–75, and was lower than the rate which prevailed in the December quarter of any of those years. The average death-rate in the fourth quarters of the 38 years 1838–75 was 21·9 per 1000; the death-rates in the 38 autumn quarters of those years ranged from 19·1 in 1845, to 25·5 in 1846. Excepting 1845, the death-rate in the last three months of 1876 was lower than that which prevailed in the corresponding period of any year since 1837, when the civil registration of births and deaths was commenced.

The 121,918 deaths included 62,904 of males, and 59,014 of females; the male death-rate was equal to 21·1, and the female rate to 18·8 per 1000 living of each sex. In equal numbers living the deaths of males were as 112 to each 100 deaths of females, corresponding with the proportion which prevailed in the last quarter of 1875. In the eleven Registration Divisions the annual death-rate among persons of both sexes ranged last quarter from 16·4 and 16·8 in the principally agricultural counties of the South-eastern and Eastern, to 21·6 in the Metropolitan, and 24·3 in the North-western Divisions. In Westmorland and in the extra-metropolitan portion of Surrey the death-rate was so low as 13·6 and 14·0 per 1000, whereas in the other counties the rates ranged upwards to 22·2 in the West Riding of Yorkshire and 24·9 in Lancashire. In equal numbers living, no less than 183 persons died last quarter in Lancashire to 100 dying in Westmorland. In comparing urban with rural death-rates it should, moreover, be remembered that the age distribution of urban populations would, all other con-

ditions being equal, give a lower death-rate than the age distribution which almost invariably prevails in rural populations, where the excess of elderly people more than counterbalances the favourable effect of the small proportion of young children. For instance, the Life Table death-rate for the population of Lancashire is 2 per 1000 lower than that for the population of Dorsetshire; yet the recorded annual death-rate last quarter in Lancashire exceeded that in Dorsetshire by 9·9 per 1000. The recorded death-rate in Lancashire exceeded by 3·2, while that in Dorsetshire was 8·7 below, the respective Life Table death-rate for each county.

In the principal urban population of England and Wales the death-rate in the quarter was equal to 21·9 per 1000, whereas in the remaining or rural population it did not exceed 17·3; the urban rate was 2·7, and the rural rate 1·4, below their average for the corresponding period of the last ten years. In equal numbers living the deaths in the urban were as 127 to 100 in the rural districts; the average proportion in the ten previous December quarters being 132 to 100. The difference between urban and rural death-rates appears to be decreasing, mainly owing to a decline in the excessive mortality in our larger towns.

In 20 of the largest English towns, including London, having an estimated population of nearly seven millions of persons, the death-rate averaged 22·4 per 1000, and exceeded the general urban rate by but 0·5 per 1000. The rates in the 20 towns ranged from 18·2 and 19·8 in Brighton and Bristol, to 28·7 and 32·8 in Oldham and Salford; the rate in Salford is probably over-stated by an underestimate of its population. The proportion of deaths from zymotic diseases was exceptionally high in Salford, and the excess of infant mortality was greater both in Oldham and Salford than in any of the other towns. In 50 other English and Welsh town districts, having a population of about two millions and three quarters, the death-rate averaged 21·7 per 1000, and was 0·7 below the rate in the 20 largest towns. The lowest rates in these 50 town districts were 14·9 in Middlesborough, 16·2 in South Shields, and 16·6 in Cambridge; the highest rates were 28·9 in Stockport, 29·3 in Macclesfield, and 29·9 in Wigan. The remaining urban population of England and Wales, consisting principally of small towns, includes about four and a half millions of persons, among whom the death-rate last quarter was equal to 21·1 per 1000, and 0·6 below the rate in the fifty town districts.

The 121,918 deaths at all ages included 30,053 of infants under one year of age, equal to 139 per 1000 births registered, showing a decline of 9 per 1000 from the average proportion in the six preceding corresponding quarters. Infant mortality in the last quarters of the seven years 1870–6, ranged from 157 in 1871, to 137 in 1872; the rate in the last quarter of 1876 was lower than that which prevailed in the last quarter of any of the preceding six years except 1872. The rate of infant mortality invariably shows the largest excess in urban populations, and returns for the last three months of 1876 form no exception to this rule; the proportion of deaths under one year to births was below 100 per 1000 in the extra-metropolitan portion of Surrey, and in Sussex, Wiltshire, and Dorsetshire, whereas it was equal to 150 in Durham, 156 in Bedfordshire, 160 in Staffordshire, 166 in Leicestershire, and 172 in Lancashire. Each of the counties showing high rates of infant mortality, except Bedfordshire, contains a large proportion of urban population. Among agricultural populations, that of Bedfordshire has recently shown a marked excess of infant mortality; the proportion of deaths under one year to births was equal to 155 per 1000 during 1875, and to 145 in 1876. Lace and straw-plait are domestic manufactures in this county; and the excessive infant mortality seems to imply that the children and home cleanliness are not sufficiently attended to. In the twenty large English towns the proportion of infant mortality averaged 151 per 1000, and ranged from 120 and 122 in Brighton and Portsmouth, to 196 and 198 in Oldham and Salford. Among the smaller towns the rate of infant mortality was below 100 per 1000 both in Maidstone and Newport, whereas it was equal to 233 in Wigan, 237 in Preston, and 254 in Blackburn. The waste of infant life in the Lancashire towns urgently calls for local if not for national investigation.

The annual rate of mortality during the quarter among children and adults aged between one and 60 years was equal to 11·3 per 1000, and was 1·1 below the rate at these ages in the corresponding period of 1875. In the twenty large towns the

annual death-rate between one and 60 years averaged 13·5 per 1000; while it was only 10·4 and 11·0 in Brighton and Nottingham, it ranged upwards to 17·8 in Manchester and 21·0 in Salford. Among persons aged upwards of 60 years the annual rate of mortality averaged 65·4 per 1000 in England and Wales, against 81·1 and 73·3 in the corresponding periods of 1874 and 1875. The lowest death-rate among persons aged upwards of 60 years in the fourth quarters of the six years 1870–5 was 68·7 in 1872, and this rate exceeded by 3·3 per 1000 the rate in the last three months of 1876. In the twenty towns the death-rate last quarter among persons aged upwards of 60 years averaged 74·9 per 1000; it was but 61·8 and 65·4 in Sunderland and Birmingham, whereas the highest rates were 87·4 in Oldham and 101·9 in Liverpool. The death-rate in Liverpool is generally excessive at all ages, but proportionally the largest excess is almost invariably shown among elderly persons. At all ages the Liverpool death-rate during the last quarter of 1876 was as 112 to 100 in the aggregate of the twenty towns, whereas the rate among persons aged over 60 years was 136 to 100. Under the influence of the unusually mild weather during November and December the death-rate of the quarter in England and Wales was below the average at all ages, but was exceptionally low among persons aged upwards of 60 years.

The 121,918 deaths from all causes during the quarter included 5429 which were referred to scarlet fever, 3031 to diarrhœa, 2874 to fever, 2105 to measles, 1484 to whooping-cough, 1112 to small-pox, and 733 to diphtheria; in all, 16,768 deaths resulted from these seven principal zymotic diseases, equal to an annual rate of 2·7 per 1000, and 1·0 below the average zymotic rate in the six preceding corresponding quarters. The zymotic death-rate in the December quarter of 1876 was lower than that which prevailed in the fourth quarter of any of the six preceding years. The death-rate from these diseases was equal to 1·4 and 1·9 per 1000 in the Eastern and South-midland Divisions, whereas it was 3·1 and 4·0 in the West-midland and North-western. The zymotic rate was less than one per 1000 in Suffolk, whereas it was equal to 4·2 in Lancashire. In the 20 large towns the rate from these diseases averaged 3·2 per 1000, and while it was only 1·4 and 1·8 in Plymouth and Nottingham, it was so high as 5·3 in Portsmouth, 5·8 in Sunderland, and 9·3 in Salford. Scarlet fever was the principal cause of the high zymotic rate in Portsmouth and Sunderland, and both small-pox and measles were fatally prevalent in Salford. In the 50 other large town districts the zymotic rate was 3·2, and corresponded with that in the 20 larger towns; it was but 0·4 and and 1·3 in Cambridge and Gateshead, while it equalled 6·4 in Halifax, 6·7 in Cheltenham, and 7·0 in Southampton. The high zymotic rate in the three last-mentioned towns was mainly due to the fatal prevalence of scarlet fever.

Of the seven principal zymotic diseases, *scarlet fever* showed the highest rate of mortality in England and Wales during the last quarter of 1876. The fatality of this disease is almost invariably greatest in the autumn and early winter, and the 5429 deaths recorded during the three months ending December showed an increase of 1657 upon the number in the preceding quarter, although considerably below the numbers returned in the fourth quarters of 1874 or 1875. The annual death-rate from this disease, which had been equal to 1·44 and 1·07 in the December quarters of 1874 and 1875, further declined to 0·89 in the corresponding period of 1876. The scarlet fever death-rate was but 0·28 in the Eastern, while it exceeded one per 1000 in the Welsh, North-western, South-western, and West-midland Divisions. Suffolk and Cumberland were almost free from fatal scarlet fever, whereas it caused an annual death-rate of two per 1000 in Somerset and Cornwall, and 2·2 in Hampshire. In 20 of the largest towns the annual rate from this disease was equal to 0·90 per 1000, and but slightly exceeded the average rate in the whole of England and Wales; Bradford and Hull suffered least from this disease, while it was more or less fatally epidemic in Wolverhampton, Leicester, Sunderland, and Portsmouth. The disease was fatally prevalent in Portsmouth throughout the greater portion of the year, and caused an annual death-rate of 5·3 and 3·9 per 1000, respectively, during the last two quarters. No fatal case of scarlet fever was registered during the quarter either in Hastings, Chatham, Ashton-under-Lyne, or Blackburn; the disease caused, however, a death-rate exceeding three per 1000 in Southampton, Reading, Northampton, Bath, Shrewsbury, and Halifax, and equal to

4·5 in Macclesfield and 4·7 in Cheltenham. The local returns afford evidence of severe outbreaks of the disease in various parts of the country, among which the following may be specially mentioned:—Cowes, Westbury (Wilts), Launceston, Falmouth and Penryn; Minehead, Dunster, Williton, and Wiveliscombe in Somersetshire; Cannock (Staffordshire), Meltham (Huddersfield), Pickering (North Riding), Houghton-le-Spring, Pembroke, Upper Llanidloes, and Bangor. Of 150 deaths registered during the quarter in Falmouth and Penryn, no less than 66 were fatal cases of scarlet fever, equal to an annual rate of nearly 15 per 1000; and in the sub-district of Pembroke, 72 of 144 deaths resulted from the same cause, equal to a death-rate of 19 per 1000.

The fatal cases of *diarrhœa* were fewer than in the corresponding quarter of any of the six preceding years, and the death-rate was nearly 20 per cent. below the average.

The 2874 deaths referred to *fever*, including typhus, enteric or typhoid, and simple or undistinguished forms of fever, showed a further marked decline from the numbers in the corresponding period of the six preceding years, and were equal to an annual rate of 0·47 per 1000 persons living. Fever, principally enteric, as well as scarlet fever, shows the greatest fatality in the fall of the year; and, although the fever death-rate in the autumn quarter of 1876 showed an increase upon that which prevailed in the preceding three months, it was no less than a third part lower than the average rate in the autumn quarters of the six years 1870–5. In the principal town districts of England and Wales the fever-rate last quarter was equal to 0·54, whereas in the remaining rural population it was 0·37 per 1000; the urban fever-rate showed an increase of 0·11 upon that which prevailed in the preceding three months, but scarcely any increase occurred in the rural rate. The fever-rate in the principally agricultural population of the South-eastern and Eastern Divisions was but 0·28 and 0·29 per 1000 respectively; while it was equal to 0·63 in Durham, 0·66 in South Wales, 0·69 in the West Riding, and 0·77 in Lancashire. In the twenty large English towns the fever-rate averaged 0·57, and ranged from 0·24 and 0·33 in Brighton and Wolverhampton, to 0·95 and 1·02 in Manchester and Liverpool. In the 50 town districts, West Bromwich and Cheltenham showed a fever-rate exceeding one per 1000, whereas no death from fever was registered either in Maidstone or Hastings. Fever, principally enteric or typhoid, was exceptionally fatal in High Wycombe, Brackley (Northamptonshire), Poole, Padstow, Ludlow, Hinckley, Uppingham, Billinge (Wigan), some of the townships around Bolton, Ripon, Pontefract, Goole, Usworth (Chester-le-Street), and Rhayader. Enteric fever was again fatally prevalent in the borough of Southport, although the deaths from this disease were less numerous than in the preceding three months.

The annual death-rate from *measles* was equal to 0·34 per 1000, and showed but a slight increase upon that which prevailed in the preceding three months. No fatal case was registered either in Rutland or Westmorland, whereas the disease showed fatal prevalence in the counties of Stafford, Buckingham, Lancaster, and Leicester. No deaths from measles occurred either in Brighton or Sunderland, but the death-rate from the disease was equal to 1·4 and 2·4 per 1000, respectively, in Bradford and Salford. The measles death-rate was also excessive in Halstead, Salisbury, Loughborough, Wigan and the neighbouring townships, Leigh, and Keighley.

The 1484 deaths referred to *whooping cough* were within seven of the number returned in the preceding quarter, and implied a death-rate of 0·24 per 1000, which was considerably below that which prevailed in the fourth quarter of any of the six years 1870–5. The disease, however, showed fatal prevalence in Halesowen, Whitwick, and Gomersal.

During the last three months of 1875, only 149 deaths from *small-pox* were registered in England and Wales; the numbers recorded in the four quarters of 1876 successively increased to 262, 501, 543, and 1112. The 1112 in the three months ending December last included 592 in London, 399 in Lancashire, and 121 in the rest of England and Wales; the annual death-rate from small-pox per million persons living in the quarter was, therefore, equal to 681 in London, and 515 in Lancashire, whereas it was but 27 in the rest of England and Wales. In seventeen

of the English counties no death from small-pox was registered; in the preceding three months, twenty-three counties had been free from this disease. The deaths from small-pox in London, which had been 7, 26, and 110 in the first three quarters of the year, further rose to 592 in the three months ending December, of which 297 occurred in the last four weeks. Of the 399 registered in Lancashire, 144 occurred in Liverpool, 99 in Salford, and 51 in Manchester (including 21 in the Monsall Hospital, situated outside the city), 21 in Burnley, and 14 in Preston. No death from small-pox was registered either in 14 of the 20 large towns furnishing weekly returns, or in 37 of the 50 other town districts; 14 occurred in Chatham, 8 in Preston, 3 in Swansea, and 2 each in Huddersfield, Stockport, and Birkenhead. In the suburban districts around London, 27 deaths from small-pox were registered, including 13 in Croydon, 5 in West Ham, 4 in Acton, 3 in Willesden, and 2 in Hornsey. An outbreak of the disease occurred at Ludlow, which resulted in 8 deaths, 5 being of unvaccinated persons.

The 733 fatal cases of *diphtheria* showed an increase of 132 upon the number returned in the preceding three months, but were fewer by 84 than those in the last quarter of 1875. The disease showed fatal prevalence in Croydon, Bromley, Stansted, Coggleshall, Radwinter, Honiton, Kempsey, Eckington (Worcestershire), Rossendale, and Llanfairarybryn.

In workhouse establishments, hospitals, and public lunatic asylums 11,214, or 9·2 per cent. of the deaths, were registered during the quarter; this per-centage slightly exceeded the average proportion in the six preceding corresponding quarters. In twenty of the largest English towns the deaths recorded in public institutions were 6010, equal to 15·5 per cent. of the total deaths; the per-centage in these towns ranged from 4·4 in Oldham, to 19·5 in London. The average proportion of institution deaths in England and Wales, exclusive of the twenty towns, was 6·3 per cent.

The deaths referred to different forms of violence in the quarter were 4242, and equal to 0·69 per 1000 persons living, showing a decline from the rate from violence which prevailed in the corresponding periods either of 1874 or 1875. In the agricultural population of the South-midland and Eastern Divisions the death-rate from violence was but 0·43 and 0·44 per 1000, whereas it was equal to 0·85 and 0·91 in the mining and manufacturing population of the Northern and North-western Divisions. In the twenty large towns the violence rate averaged 0·86 per 1000, and ranged from 0·41 and 0·48 in Portsmouth and Sheffield to 1·29 and 1·35 in Hull and Liverpool.

During the quarter 6367 inquests were held, showing a proportion of 5·2 per cent. of the total deaths, which scarcely differed from the average proportion during the past six years. The number of inquests cases usually exceeds by about 50 per cent. the number of deaths from violence, but the proportion of inquests held respecting sudden deaths from natural causes, and deaths relating to the cause of which no satisfactory evidence is forthcoming, differs widely with the discretion and practice of the various coroners. In the twenty large English towns the proportion of inquest cases to total deaths averaged 6·4 per cent., and ranged from 2·7 and 3·2 per cent. in Sheffield and Oldham, to 8·0 and 10·0 in Birmingham and Manchester. As in an equal number of deaths nearly four times as many inquests are held in Manchester as in Sheffield, it would be desirable to ascertain whether too few inquests are held in Sheffield, or an unnecessarily large number in Manchester. Assuming that inquests are held in all cases of death from violence, it appears that the proportion of inquests held last quarter relating to deaths from other causes than violence was less than one per cent. in Liverpool, Sheffield, and Oldham, whereas it was equal to 3·0 in London, 3·4 in Birmingham, and 5·5 per cent. in Manchester.

Health of Foreign Cities.

A summary of the weekly returns with which the Registrar General is favoured by various local authorities abroad shows that the average annual death-rate during the fourth quarter of 1876, in twenty-six Indian and Foreign cities, was 25·8 per 1000, against 22·4 in twenty of the largest English towns. The population of

these twenty-six Foreign cities is estimated at rather more than eleven millions of persons. The lowest death-rates during the quarter were 19·7 and 19·8 in Philadelphia and Christiania; whereas the rate was equal to 36·3 in Buda-Pesth, 39·0 in Madras, and 45·7 in Alexandria. In the thirteen weeks taken to represent the quarter, cholera caused 436 deaths in Calcutta, 41 in Bombay, and 303 in Madras. In Paris no less than 992 deaths resulted from typhoid fever, equal to an annual rate of 2·15 per 1000 persons living, whereas in London the enteric fever-rate did not exceed 0·33 per 1000; in Paris, therefore, this rate last quarter was more than six times as high as in London, although the average weekly numbers in Paris declined to 64 in the last quarter, from 118 in the third quarter of the year. The fatal cases of small-pox in Paris were 72, against 122 and 78 in the two preceding quarters. Small-pox was also prevalent in Brussels, Vienna, Buda-Pesth, and Naples. Scarlet fever caused 238 deaths in Berlin, 161 in Vienna, 108 in Brooklyn, and 110 in Boston. Typhoid fever was fatally prevalent in Berlin, where 173 deaths occurred from this disease; and still more so in Philadelphia, where as many as 250 deaths were referred to typhoid fever during the quarter. Diphtheria caused 324 deaths in New York, 190 in Brooklyn, and 136 in Boston.

The Year 1876.

In the United Kingdom 1,154,627 births and 676,928 deaths were registered during the year 1876, equal to a birth-rate of 34·8, and a death-rate of 20·4, per 1000 persons estimated to be living in the middle of the year. The *natural* increase of population, by excess of births over deaths, was therefore 477,699 and 91,715 more than that in the previous year. The *actual* increase depends also upon the balance between immigration and emigration, and no complete record of immigration exists. Returns issued by the Board of Trade show that during the year 102,601 emigrants of British origin left the different ports of the United Kingdom at which emigration officers are stationed. The numbers of emigrants from the United Kingdom have steadily declined in recent years, and the number in 1876 was 22 per cent. less than that in 1875, which showed a decline of 31 per cent. from that in 1874. The decline in 1876 was equal to 14 per cent. in English, 30 in Scotch, and 36 per cent. in Irish emigrants. Of the 102,601 emigrants in 1876, 53,881 left the United Kingdom for the United States, 31,764 for the Australian Colonies, 9372 for British North America, and 7584 for all other places.

In England and Wales 887,464 births and 510,308 deaths were registered during 1876; the birth-rate was 36·5 and the death-rate 21·0 per 1000 persons living. The birth-rate exceeded by 1·1, whereas the death-rate was 1·2 below, the average rates in the ten preceding years; the death-rate was lower than in any year since 1856. The marriage-rate for the first nine months of 1876 was slightly below the average for the corresponding period of the preceding ten years; the marriage returns for the last three months of 1876 are not yet available.

In Lancashire the rate of mortality during 1876 was equal to 26·0 per 1000, in the West Riding of Yorkshire it was 23·1, and in London 22·3. In the whole of England and Wales, excluding Lancashire, the death-rate was but 20·3; therefore in equal numbers living 128 persons died in Lancashire in 1876, to 100 in all other parts of England and Wales. Upon the 159 urban and rural sanitary authorities of Lancashire rests the responsibility for this terrible waste of life among the 3,072,689 persons estimated to be living in the county in the middle of 1876.

The 510,308 deaths included 129,537 of infants under one year of age, and 124,059 of persons aged upwards of 60 years. The rate of infant mortality measured by the proportion of deaths under one year to births was 146 per 1000, against 149, 151, and 158 in the three preceding years, and was lower than in any year since 1862. The rate of mortality among persons aged upwards of 60 years was 68·3 per 1000 persons estimated to be living at those ages, against 72·0 and 77·5 in 1874 and 1875.

The deaths registered in England and Wales from all causes during the year included 73,217 which were referred to the seven principal zymotic diseases,

showing a decline of 6042 from those referred to the same causes in 1875. These 73,217 deaths included 2418 from small-pox, 9551 from measles, 16,643 from scarlet fever, 2822 from diphtheria, 9884 from whooping-cough, 10,372 from fever, and 21,527 from diarrhœa. The rate of mortality from these seven diseases was equal to 3·0 per 1000, against 3·8, 2·9, 3·6, and 3·3 in the four preceding years. The fatal cases of small-pox and measles were more numerous in 1876 than in 1875, whereas those of each of the five other diseases had declined. The steady decline in the fatal prevalence of fever (including typhus, enteric, and simple fevers) affords the most satisfactory evidence of sanitary progress. The annual death-rate from fever, which in the six years 1870 to 1875 had steadily declined from 79 to 52 per 100,000 persons living, further declined last year to 43. The inquest cases registered in 1876 were 26,432, equal to 5·2 per cent. of the total deaths; the proportion both in 1874 and 1875 was 5·1 per cent. The deaths referred to different forms of violence in 1876 were 17,572, and showed a decline of 264 from the recorded number in 1875.

The foregoing numbers are derived from the Quarterly Returns furnished by the local registrars to the Registrar General immediately after the close of the four quarters of the year, and are subject to revision when the causes of death and other details are finally classified and tabled for publication in the Annual Report for 1876.

PRELIMINARY TABLES.

TABLE I.—**Marriages, Births,** and **Deaths** registered in **England** and **Wales** in the Years **1866–76,** and in each Quarter of those Years.

YEARS	1866	1867	1868	1869	1870	1871	1872	1873	1874	1875	1876

* Furnished by the Chief Cashier of the Bank of England.
† As published by the Comptroller of Corn Returns to the Board of Trade.
‡ These are the average prices at which seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. These figures are derived from returns which have been supplied by Mr. Richard Meade of the Mining Record Office.

Note.—The three months January, February, March, contain 90, and in leap year, 91 days; the three months April, May, June, 91 days; and each of the last two quarters of the year, 92 days. For this inequality a correction is made in calculating the rate of mortality in the different quarters of the year. The annual rate is the mean of the four quarterly rates.

Note.—The deaths in Manchester and Bristol include paupers belonging to these cities who died in Workhouses situate outside the Municipal boundaries.

* The figures for the English towns are the numbers enumerated in April 1871, raised to the middle of 1876 by the addition of five and a quarter years' increase, calculated on the rate which prevailed between 1861 and 1871. The population of Dublin is taken as stationary at the number enumerated in April 1871.

TABLE VII.—**Deaths** in **20 large English Towns** in the 13 Weeks ending 30th December 1876.

(Estimated aggregate population in middle of 1876, 6,953,639; viz., 3,489,428 in London, and 3,464,211 in the 19 other Towns; see note to Table VI.)

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the st column approximately represent, are Municipal or Parliamentary. Imp^{t} D. signifies an Improvement District.

* For method of framing these estimates see note * to Table VI. As the population of Devonport, Macclesfield, and Ashton-under-Lyne clined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the present pulation of Coventry, Dudley, and Wigan, have been based upon local information as to the increase of the inhabited houses in these two roughs between 1871 and 1875.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County ospitals and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the towns, or by the exclusion or dition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where e Workhouse is situate outside that area.

TABLE X.—LONDON—OUTER RING. **Births**; **Deaths** from **All Causes** and from the **Seven Principal Zymotic Diseases**; and the **Annual Rate of Mortality** during the 13 Weeks ending 30th December 1876.

ROMFORD (*part of*)	141	55	–	34·5	13·5	0·0

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase since 1871 has been the same as that which prevailed between 1861 and 1871. In calculating the rates of mortality for this Table a proportion of the deaths recorded in the two Middlesex County Lunatic Asylums, situated in the Districts of Uxbridge and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts in the Outer Ring.

TABLE XI.—**Births** and **Deaths** in the **Fourth Quarter** of 1876 in **26 Foreign Cities.**

[a] The *Registration* or *Union Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with t Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the princip town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ more less from the boundaries of Counties (proper).

[b] The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

[c] See page 14, note [b].

Note.—*The Registrars alone must be considered responsible for the opinions expressed in the foot notes respecting the prevalence of epidem diseases, also as to the statements respecting sanitary arrangements, &c. &c.*

[a] The *Superintendent Registrars' Districts* are collections of contiguous Parishes or Places, nearly always identical with the Poor Law Unions of the same names; they are 632 in number, and are here arranged topographically under the Registration Counties.

[b] These figures have been furnished to the Registrar-General by the Ordnance Survey Department. They do not include space occupied by foreshore or tidal water of rivers and creeks.

[c] See page 14, note b.

II.—SOUTH EASTERN COUNTIES.—SUPERINTENDENT REGISTRARS' DISTRICTS—*continued.*

The present number of Superintendent Registrars' districts is 632. The above numerical arrangement—1 to 627—was adopted on January 1871. Six new Superintendent Registrars' districts, viz., Fulham (1*a*), Prestwich (467*a*), Barrow-in-Furness (481*a*), Middlesbrough (532*a*), Lanchester (546), and Pontardawe (587*a*), have been constituted; and Shrewsbury (352) has been incorporated with Atcham (351).

I.—LONDON.—Registration Sub-districts.

No.	Registration Sub-districts.[a]	Area in Statute Acres.	Enumerated Population, 1871.	Births[b] Registered in the Quarter ending 31 Dec. 1876.	Deaths[b] *Average in Quarters ending 31 Dec. in the 3 Years 1873-75.*	Deaths[b] Registered in the Quarter ending 31 Dec. 1876.	The Deaths in the Quarter are stated by the Registrars to include[b]: Deaths of: Infants under 1 Year of Age.	Deaths of: Persons aged 60 Years & upwds.	Deaths from: Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhœa.	Cholera.	Violence.	Inquest Cases.	Deaths in Public Institutions.

[a] The *Sub-districts* (2190 in number) are sub-divisions of *Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

[b] For London the numbers of Births and Deaths, as well as the details given, "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks, viz., from 1st October to 30th December 1876.

[a] 32 : 2.—Of the 28 persons aged 60 years and upwards, whose deaths were registered, 14 exceeded 70, and 5 were above 90 years.
[b] 36 : 1.—Of the 54 deaths in Public Institutions, 53 occurred in the Metropolitan Asylum for Imbeciles.
[c] 37 : 1.—The majority of the deaths from small-pox occurred in the workhouse. About one half of the deaths from diphtheria and the fferent forms of fever were registered in December.
[d] 37 : 2.—During 7 weeks of the quarter, no death occurred in the parish of Mitcham, which at the Census of 1871 had a population of 98 persons.
[e] 38 : 1.—Of the 4 deaths in Public Institutions, 3 occurred in the Atkinson Morley Convalescent Hospital.
[f] 40 : 1.—Of the 19 deaths from diphtheria, 6 were registered in October, 7 in November, and 6 in December. The disease prevailed chiefly the parishes of Bromley and Beckenham.
[g] 41 : 2.—Of the 9 deaths from scarlet fever, 2 occurred in Dartford, 2 in Swanscombe, and 5 in Wilmington.
[h] 42 : 1.—Eighteen of the deaths from scarlet-fever were registered in December; 13 more occurred during the first three weeks of nuary, and the disease still prevails chiefly in the western half of the sub-district. Of the 4 deaths from cholera, 2 were described as oleraic diarrhœa, and 2 as simple cholera.
[i] 43 : 2.—Scarlet fever is chiefly confined to the parish of Strood.
[j] 45 : 2.—With one exception the deaths from small-pox were of persons between the ages of 16 and 36 years, who were either unvac-nated, or had not been re-vaccinated since infancy.

II.—SOUTH EASTERN COUNTIES.—Registration Sub-districts—*continued.*

[a] 194 : 1.—The Registrar says a slight form of typhus fever has been prevalent.
[b] 197 : 3.—The 5 deaths from diphtheria occurred in the parish of Great Coggeshall. The 3 deaths from fever were described as typhoid.
[c] 198 : 2.—The ages of the 7 persons, aged 60 years and upwards, whose deaths were registered, averaged 80 years.
[d] 201 : 1.—The 2 deaths from small-pox occurred in one house at Rickling, being those of father and son; the son was unvaccinated, and brought the disease from London; the father had been innoculated 45 years before.
[e] 201 : 3.—Of the 4 deaths from diphtheria, 3 occurred in Radwinter; the disease is abating.
[f] 205 : 3.—The 2 deaths from fever were described as typhoid.

IV.—EASTERN COUNTIES.—Registration Sub-districts—*continued.*

No.	Registration Sub-districts.	Area in Statute Acres.	Enumerated Population, 1871.	Births: Registered in the Quarter ending 31 Dec. 1876. [a] 241 : 1.—Eight of the deaths from scarlet fever occurred in the parish of Stratton St. Margaret, and 3 in Stanton-Fitzwarren.
[b] 241 : 2. Of the 21 deaths from scarlet fever, 9 occurred in Old Swindon, 9 in New Swindon, and 3 in Bishopstone; 2 deaths from typhoid fever also occurred in New Swindon.
[c] 250 : 3. Of the 19 deaths from scarlet fever, 11 occurred in October, 4 in November, and 4 in December; 9 of these took place in the town of Westbury.
[d] 251 : 1.—The Registrar says there are several cases of scarlet fever in his sub-district.
[e] 251 : 3.—No death occurred in the parish of Codford St. Peter, between 23d June 1875 and 20th December 1876. The parish had a population of 326 persons in 1871.
[f] 252 : 2.—Scarlet fever principally prevailed in the parish of Pewsey; the disease was also present in a mild form in Everley.

[a] 301 : 4.—The Registrar states, that for several days there has been no fresh case of scarlet fever.
[b] 303 : 1.—Scarlet fever was prevalent in Minehead and Porlock, where the drainage is very defective.
[c] 303 : 2.—Scarlet fever prevails principally in the village of Alcombe (Dunster).
[d] 303 : 3.—Scarlet fever of a very fatal type prevails in the town of Williton, where 14 of the above 28 deaths occurred.
[e] 306 : 3.—Scarlet fever is still very prevalent; sanitary precautions are strictly attended to by the medical officer of health.
[f] 306 : 4.—Sixteen of the deaths from scarlet fever occurred in the urban portion of the sub-district.
[g] 306 : 5.—The 5 deaths from scarlet fever were of children from 6 months to 3 years of age.
[h] 307 : 4.—Of the 21 deaths from scarlet fever, 9 occurred in October, 6 in November, and 6 in December.
[i] 308 : 2.—Scarlet fever prevails extensively in the parish of Allen.
[j] 309 : 2.—Scarlet fever has been very prevalent, but the disease has nearly ceased.

a 339 : 4.—Scarlet fever of a mild form still prevails in the city.
b 339 : 5.—Of the 4 deaths from scarlet fever, 3 occurred in Madley.
c 344 : 2.—Of the 8 deaths from small-pox, 5 were of persons who had not been vaccinated; the disease has nearly disappeared. Five of the deaths from fever were described as typhoid or enteric.
d 345 : 4.—The Registrar says that small-pox is present in his sub-district.

VI.—WEST MIDLAND COUNTIES.—Registration Sub-districts—*continued.*

No.	Registration Sub-districts.	Area in Statute Acres.	Enumerated Population, 1871.	Births: Registered in the Quarter ending 31 Dec. 1876. [a] 351 : 1.—The 3 deaths from scarlet fever occurred in one house.

[b] 351 : 8, 9.—The sub-districts of St. Mary and St. Chad, which formed the district of Shrewsbury previously to 1st October 1871, were on that date annexed, without change in their limits, to Atcham. Scarlet fever has been very prevalent in the city, chiefly amongst children.

[c] 353 : 3.—The deaths in Oswestry during the year 1876 were lower than in any year since 1858.

[d] 354 : 3.—Scarlet fever has been very prevalent in a mild form, but is now abating. Small-pox was imported, but no other cases have appeared.

[a] 447 : 3.—The 2 deaths from fever were described as typhoid, and occurred at the same house in the parish of Lymm. The death from scarlet fever also occurred in Lymm. Of the 14 persons aged 60 years and upwards whose deaths were registered, 9 exceeded 70 years.

[b] 448 : 3.—The 2 deaths from small-pox were of adults, and occurred at the same house, in Halton Road, Runcorn; neither of them had been vaccinated. The disease appears to be abating. The deaths from measles and scarlet fever also occurred in Runcorn.

[c] 448 : 4.—Of the 5 deaths from diphtheria, 2 occurred at Newton in the same house, one at Kingsley, one in Fluin Lane, Frodsham, and one in Main Street, Frodsham.

[d] 449 : 1.—Of the 15 deaths from scarlet fever, 14 occurred in the township of Barnton.

[e] 449 : 2.—The 19 deaths from scarlet and typhoid fevers occurred in the townships of Leftwich, Northwich, and Witton.

[f] 452 : 2.—The death from small-pox occurred to a man whose daughter had returned from service in Liverpool with the disease, but she recovered.

[g] 455 : 6.—An arrangement appears to exist between the vestry of Liverpool and the guardians of West Derby, by which West Derby fever cases are sent to Liverpool workhouse, and Liverpool small-pox cases go to West Derby in exchange.

[h] 456 : 1.—Of the 63 deaths from small-pox, 31 occurred in private houses, and 32 in Public Institutions.

[i] 456 : 2.—Of the 86 deaths from small-pox (23 of which occurred in private houses), 22 were of persons who had been vaccinated, 20 who had not, and 44 were not reported as to vaccination. See previous note g.

[a] 464 : 3.—Although typhoid fever has somewhat abated there are a few fresh cases constantly occurring.
[b] 465 : 4.—Of the 3 deaths from small-pox only one was certified as vaccinated.
[c] 466 : 4.—Of the 72 deaths from small-pox, 15 were registered in October, 29 in November, and 28 in December; 14 deaths were of vaccinated, 25 of unvaccinated persons, and 33 were "not stated" as to vaccination.
[d] 467*a* : 1.—Of the 32 deaths from small-pox, 30 occurred in the hospital connected with the Manchester Royal Infirmary; of these 30 persons, 13 had been vaccinated, 13 were unvaccinated, and 4 were not stated as to vaccination.
[e] 469 : 3.—There have been two cases of small-pox which have been removed to the workhouse. Scarlet fever has been fatal, but the Sanitary Authority have issued notices in connexion with the disease.
[f] 469 : 4.—There was only one other case of small-pox; the patient was progressing towards recovery.
[g] 469 : 6.—Although there were only 2 deaths from fever the disease has been very prevalent.

[a] 472 : 1.—Of the 21 deaths from small-pox, 3 were registered in October, 7 in November, and 11 in December; 3 deaths were of vaccinated persons, and 18 were "not stated" as to vaccination.

[b] 472 : 3.—Three deaths from fever were registered during the first three weeks of January; the disease prevails especially in the village of Barrowford, but the Sanitary Authority are using means to check it. It is said to have originated at a farm-house, and to have been spread by persons fetching milk.

[c] 476 : 2.—Small-pox has been fatal to 8 persons, whose ages varied from five to thirty-six years. The first death occurred November 10th and the last December 19th. The utmost efforts were made by the Sanitary Authority, assisted by the medical profession, to stay the disease.

[a] 494 : 2.—The Registrar believes scarlet fever, which has prevailed so long, is now declining.

[b] 495 : 3.—Scarlet and typhoid fevers have been prevalent, but this return includes cases from other sub-districts in consequence of the Halifax Borough Hospital being situated here.

[c] 495 : 10.—With one exception, the 24 deaths from scarlet fever have occurred within the Halifax Borough part of Northowram.

[d] 496 : 8.—A few cases of small-pox have appeared at Queensbury in the township of Clayton, but they have all been removed to the Bradford Fever Hospital, and the Registrar believes there are no fresh cases.

[e] 496 : 12.—The 5 deaths from fever were described as typhoid.

[f] 500 : 3.—Of the 60 deaths in Public Institutions, 56 occurred in the General Infirmary.

IX.—YORKSHIRE.—Registration Sub-districts—*continued.*

a 510 : 4.—Scarlet fever has been very prevalent in Norton and Campsall.
b 513 : 2.—Of the 20 deaths from scarlet fever 17 occurred in the town of Selby, where the fever has been very virulent; but there are not many cases now.
c 515 : 2.—The 2 deaths from scarlet fever occurred at the York Union Workhouse.
d 516 : 3.—Of the 12 deaths from scarlet fever, 8 were registered in November, and 4 in December.
e 517 : 3.—The 4 deaths from scarlet fever were confined to two families.
f 517 : 4.—The Registrar remarks, that although the death-rate is far below the average, the drainage is bad and the water supply of a very impure character.

[a] 548 : 1.—Of the 33 deaths from scarlet fever, 11 occurred in October, 12 in November, and 10 in December.
[b] 549 : 2.—Of the above 126 deaths, 56 occurred in the township of Usworth, where 13 from scarlet fever, and 5 from the different forms of fever also took place. The population of Usworth at the Census of 1871 was 4209 persons.
[c] 550 : 5.—The 7 deaths from fever were attributed to typhoid.
[d] 551 : 2.—The low number of births and deaths may be attributed to the want of work in the iron shipbuilding trade at Jarrow. Numerous workmen, and their families, have left the place in search of employment.
[e] 553 : 3.—The Registrar says the births and deaths are considerably below the corrected average, the principal cause being a decrease of the resident population.
[f] 554 : 4.—There is a marked decrease of population attributed to the slackness in the iron and shipbuilding trades.
[g] 556 : 2.—The 6 deaths from scarlet fever occurred in Hexham.
[h] 556 : 3.—The Registrar says scarlet fever is rather prevalent.
[i] 559 : 2.—Typhoid fever is very prevalent in Guidepost and Stakeford, 4 cases having terminated fatally since the 16th December. In 2 cases the births of triplets have been registered.

[a] 622 : 2.—Of the 27 deaths from scarlet fever, 8 were registered in October, 12 in November, and 7 in December.
[b] 624 : 2.—Of the 5 deaths from scarlet fever, 2 occurred in the same family at Ty Guyn Penisarwaen, 2 in the village of Waenpentir, and one at Port Dinorwic.
[c] 625 : 2.—Of the 39 deaths from scarlet fever, 34 occurred within the Bangor urban sanitary district, and 5 within the Bangor rural sanitary district.
[d] 627.—See page 13, note [a].
[e] 627 : 6.—The Registrar says his sub-district is now free from fever.

Remarks on the Weather during the Quarter ending December 31st, 1876.

By James Glaisher, Esq., F.R.S., *&c.*

Till the 20th of October the weather was warm with frequent rain, the average excess of mean temperature was $5\frac{1}{4}^{\circ}$ daily; from October 21st to November 12th, it was mostly cold, with but little rain, the average deficiency of temperature was $3\frac{1}{4}^{\circ}$ daily, and from November 13th to the end of the year, with the exception of the six days December 21st to December 26th, the weather was warm, and at times very warm, with very frequent rain; the average daily excess of temperature for the 38 days ending December 20th was $4\frac{1}{4}^{\circ}$; the average deficiency for the six days ending December 26th was $3\frac{1}{4}^{\circ}$ daily, and the average excess for the last five days of the year was $12\frac{1}{4}^{\circ}$.

The most remarkable phenomena in this quarter were, the very small atmospheric pressure, the high temperature, and the extraordinary falls of rain in the month of December.

At the height of 160 feet above the level of the sea, the mean reading of the barometer in December was 29·311 in., and back to 1841 there is no instance in any month of so low a reading, the least mean monthly atmospheric pressures previously experienced were 29·379 in. and 29·413 in. both in December, in the years 1868 and 1872 respectively.

The mean temperature of the air in December was 44°1, and back to 1771 there have only been nine Decembers in which the temperature has been so high.

The fall of rain in December was exceedingly anomalous, at about London and its neighbourhood it amounted to nearly 6 in., and back to 1815 there has been no instance of so great a fall in December; the previous instances of monthly falls equalling this amount nearly, were 7·0 in. in July 1828; 6·0 in. in October 1841; 6·0 in. in November 1852: 5·8 in. in June 1860; and 5·8 in July 1867.

The fall of rain was large everywhere, rain fell on every day in December, but on the 10th to only a small amount and at a few places, on the 8th, 9th, 11th, 12th, 13th, 14th, 15th, and 22nd it fell to the amount of 0·2 in. or 0·3 in., but was not quite general; on every other day rain was general, and exceeded half an inch in amount at one or more places, and on 12 days the amount was one inch or more at at least one station. The following Table shows the fall of rain on those 12 days at the several stations:—

Fall of Rain at the different Stations on Twelve selected days.

These heavy and continuous rains produced great floods over low lying land throughout the country, and agricultural operations were generally stopped. During December several severe gales took place, and caused a great many shipwrecks on our coasts, particularly at the times of the extreme low readings of the barometer.

The readings of the barometer in the neighbourhood of London were above their averages from the 1st to the 8th of October, with the exception of the 4th; they were also below from the 9th to the 19th, with the exception of the 15th, when the excess was 0·06 in.; and from the 21st to the end of the month the readings were all above their average values. The mean reading for the month was 29·756 in. being 0·060 in. above the average of the preceding 35 years. From the 1st to the 10th of November the readings of the barometer were above their averages; from the 11th to the 16th they were below; on the 17th and 18th a little above; on the 19th and 20th they were slightly below; again above on the four following days; and then below from the 25th to the end of the month. The mean reading for the month was 29·702 in., being 0·049 in. below the average.

During the whole month of December the barometer readings were below their averages, excepting on four days only, viz.: 9th, 10th, 11th, and 26th, when they were 0·20 in., 0·22 in., 0·11 in., and 0·08 in. respectively above their averages.

The barometer readings were therefore generally very low from the 25th of November to the end of the year; the mean amount in defect of the average for this period of 37 days was 0·501 in. The readings were the lowest from the 3rd to 7th of December; and from the 18th to the 22nd inclusive. The mean amount in defect of the average from the 3rd to the 7th of December was 1·03 in. daily; and that from the 18th to the 22nd was 0·98 in. daily.

The mean reading of the barometer for the month of December was 29·311 in., being 0·494 in. *below* its average.

The minimum reading of the barometer in the month of December was 28·23 in. on the morning of the 4th, and the maximum reading was 30·03 in. on the morning of the 10th, thus showing in six days a difference of reading of 1·8 in.

At Greenwich *the mean temperature* for October was 3°·0 below that of September; that of November was 8°·8 below that of October; and that of December was 0°·1 above that of November. (From the preceding 35 years' observations the *mean temperature* of October below that of September is 7°·1; that of November below that of October is 6°·7; and that of December below that of November is 3°·4.)

The mean temperature of the air of October below that of September over the whole country was 2°·5; that of November below that of October was 9°·0; and that of December above that of November was 0°·2.

The mean temperature of the air for October was 52°·8, being 3°·2 and 2°·6 above the averages of the preceding 105 years, and 35 years respectively. In the preceding 105 years there are but 8 instances of so high a mean temperature for the month of October, viz.:—

In 1795 it was	53°·4	In 1818 it was	53°·7	In 1857 it was	52°·9
1807 „	53°·0	1831 „	55°·0	1861 „	54°·9
1811 „	55°·5	1847 „	52°·9.		

The mean temperature of the air for November was 44°·0, being 1°·7 and 0°·5 above the averages of the preceding 105 years, and 35 years respectively; it was higher than the values in 1874 and 1875 by 2°·0 and 1°·9 respectively.

The mean temperature of the air for December was 44°·1, being 5°·0 and 4°·0 above the averages of the preceding 105 years, and 35 years respectively. In the preceding 105 years there are but 9 instances of so high a mean temperature for the month of December, viz.:—

In 1795 it was	44°·8	In 1828 it was	44°·5	In 1852 it was	47°·6
1806 „	46°·8	1833 „	44°·6	1857 „	45°·1
1821 „	44°·3	1842 „	45°·0	1868 „	46°·0.

The mean temperature of the air for the quarter was 47°·0, being 3°·3 and 2°·4 above the averages of the preceding 105 years, and 35 years respectively. In the preceding 105 years, the following are the only instances of so high a mean temperature of the quarter, viz.:—

In 1806 it was	48°·5	In 1831 it was	47°·1	In 1852 it was	48°·1
1818 „	47°·2	1847 „	47°·5	1857 „	47°·9
1821 „	47°·4				

The mean high day temperatures of the air were respectively 1°·3, 0°·3, and 2°·7 above their averages in October, November, and December.

The mean low night temperatures of the air were respectively 3°·4, 1°·4, and 4°·9 above their averages in October, November, and December. Therefore the days and nights were warm throughout the quarter.

The mean daily ranges of temperature were respectively 2°·1, 1°·0, and 2°·0 below their averages in October, November, and December.

At Greenwich the atmospheric pressure in October was greater than in September by 0·136 in., in November less than in October by 0·054 in., and in December it was less than in November by 0·391 in. (From the preceding 35 years' observations the mean pressure in October is less than in September by 0·111 in., that in November greater than in October by 0·055 in., and that in December greater than in November by 0·054 in.) Over the whole country the mean increase of pressure from September to October was 0·137 in. The decrease from October to November was very nearly the same everywhere; its mean from all stations was 0·045 in. The mean decrease of pressure from November to December over the whole country was 0·418 in.

At Greenwich the fall of rain in October was 1·6 in., being 1·2 in. below its average; in November it was 3·1 ins., being 0·8 in. above its average; and in December was 5·8 ins., being 3·8 ins. above its average; the total fall in the quarter was 10·5 ins., being 3·4 ins. above its average.

The following are the instances back to 1815, when the fall of rain in the quarter was as large as that in the present year, viz.:—1821 it was 12·5 ins.; 1822 it was 10·6 ins.; 1824 it was 10·9 ins.; 1841 it was 12·1 ins.; 1852 it was 12·0 ins.; and 1872 it was 11·3 ins. In the same period there was no instance of so large a fall in December as in the present year; the nearest approaches to it were in the years 1821 and 1868 when the falls were 5·2 ins. and 5·4 ins. respectively. The total fall in November and December was 8·9 ins., and back to 1815 there is but one instance of so large a fall in these two months, viz., in the year 1821 when it was 9·9 ins.

The average duration of the different directions of the wind referred to eight points of the compass, and the duration of each direction in each month in the quarter were as follows:—

Direction of Wind.	October.			November.			December.		
	Average.	1876.	Departure from Average.	Average.	1876.	Departure from Average.	Average.	1876.	Departure from Average.
	d.	d.	d.	d.	d.	d.	d.	d.	d.
N.W.	2	1	−1	2¼	2	− ¼	2	1	−1
N.	3	2	−1	3¾	4	+ ¼	2¾	1	−1¾
N.E.	2½	5	+2½	3½	2	−1½	2	2	0
E.	1¼	4	+2¾	2	3	+1	1¾	2	+ ¼
S.E.	1¾	3	+1¼	2	5	+3	1¾	4	+2¼
S.	3½	6	+2½	3½	4	+ ½	3	9	+6
S.W.	9	6	−3	7¼	4	−3¼	9¾	9	− ¾
W.	4¼	2	−2¼	2	5	+3	4	1	−3
Calm (nearly.)	3¾	2	−1¾	3¼	1	−2¼	4	2	−2

The plus sign (+) denotes excesses over averages; in the month of October the largest numbers affected with this sign are opposite to the E., N.E., and S., in November to the S.E. and W., and in December to the S.E. and S.

The minus sign (−) denotes defects below averages; in October the largest numbers affected with this sign are opposite to the S.W. and W., in November to the S.W., and in December to to the W. and N.

Note.—In reading this table it will be borne in mind that the minus sign (−) signifies *below* the average, and that the plus sign (+) signifies *above* the average.

Thunderstorms. During the quarter but little *thunder* was heard; *lightning* was seen at different stations on 6 days in October, 3 days in November, and on 4 days in December.

Solar halos were seen on 8 occasions in October and November, but none were seen in December.

Lunar halos were seen on 10 nights in October, 6 in November, and on 8 in December.

Aurora borealis. An aurora was reported as being seen on December 5 at Weybridge, but none was seen at any other station; the paucity of auroræ during the last 2 or 3 years is remarkable; none have been seen for several months.

Snow fell on November 7 to 12, and the 24th, and in December on every day from the 21st to the 27th inclusive at stations North of latitude 51°.

Hail: scarcely any fell in October; in November it fell on 4 days, and in December on 12 days, but at very few stations.

Fog prevailed on 16 days in October, on 21 days in November, and on 21 days in December, and, therefore, on 58 days during the quarter.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING DECEMBER 31ST, 1876.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the fifth edition of his Hygrometrical Tables.

The highest temperatures of the air were at Caterham, 80°·0; East Tilbury, 77°·0; and at Salisbury, 75°·0.
The lowest temperatures of the air were at Carlisle, 17°·6; Lampeter, 18°·0; and at Allenheads, 18°·3.
The greatest daily ranges of the temperatures of the air were at Salisbury, 14°·5; East Tilbury, 14°·1; and at Chiswick, 14°·0.
The least daily ranges of the temperatures of the air were at Bradford, 7°·0; Guernsey, 7°·6; and at Brighton, 7°·8.
The greatest numbers of rainy days were at Nottingham, 74; North Shields, 69; and at Calcethorpe, 67.
The least numbers of rainy days were at Ramsgate, 42; Brighton, 45; and at Streatley and Chiswick, both 47.
The heaviest falls of rain were at Truro, 20·66 inches; Guernsey, 20·27 inches; and at Lampeter, 19·44 inches.
The least falls of rain were at Holkham, 7·21 inches; Norwich, 7·33 inches; and at Wisbech, 7·69 inches.

Quarterly Meteorological Table for different Parallels of Latitude.

PARALLELS OF LATITUDE, &c.	Mean Pressure of dry Air reduced to the level of the Sea.	Mean of all Highest Readings of the Thermometer	Mean of all Lowest Readings of the Thermometer.	Mean Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.
